Government Efficiency and Effectiveness: Opportunities for Improvement and Considerations for Restructuring

Statement of Patricia A. Dalton
Chief Operating Officer

G A O

Accountability * Integrity * Reliability

Mr. Chairman, Ranking Member Collins, and Members of the Committee:

Thank you for the opportunity to discuss the need to reexamine the structures and operations of the federal government. You also asked that we address the “Reforming and Consolidating Government Act of 2012” (S. 2129), first proposed by the President and introduced in the Senate by Chairman Lieberman and Senator Warner. We also present our recent work highlighting the existence of duplication, overlap, and fragmentation across the federal government.¹

The federal government faces an array of challenges and opportunities to enhance performance, ensure accountability, and position the nation for the future. A number of overarching trends, such as fiscal sustainability and debt challenges, demographic and societal changes, developments in science and technology, diffuse security threats, global interdependence, and the rapid expansion of collaborative networks, underscore the need for a fundamental reconsideration of the role, operations, and structure of the federal government for the 21st century.

My testimony today is based on our work on government reorganization, transformation, and management issues as well as our recently issued reports that identify additional opportunities and progress made to improve the efficiency and effectiveness of government. Specifically, it addresses:

- issues related to reexamining the structure of the federal government and its operations, including the President’s request that Congress grant authority to reorganize the executive branch agencies;
- federal programs or functional areas where unnecessary duplication, overlap, or fragmentation exists as well as opportunities for potential cost savings or enhanced revenues identified in our 2012 annual report; and

¹See GAO, *2012 Annual Report: Opportunities to Reduce Duplication, Overlap and Fragmentation, Achieve Savings, and Enhance Revenue*, [GAO-12-342SP](#) (Washington, D.C.: Feb. 28, 2012) and *Follow-up on 2011 Report: Status of Actions Taken to Reduce Duplication, Overlap, and Fragmentation, Save Tax Dollars, and Enhance Revenue*, [GAO-12-453SP](#) (Washington, D.C.: Feb. 28, 2012).

-
- the status of actions taken by Congress and the executive branch to address the issues we identified in 2011.

We conducted our work in accordance with generally accepted government auditing standards or with our quality assurance framework, as appropriate.

Reexamining Federal Government Structures and Operations

Reforming and Consolidating Government Act of 2012 (S. 2129) Would Renew and Expand President's Authority to Propose Restructurings

On February 17th, Chairman Lieberman and Senator Warner introduced S. 2129, entitled "Reforming and Consolidating Government Act of 2012", a bill renewing the Presidential authority to propose government organizational changes and obtain congressional approval through an expedited process. From 1932 to 1984, Congress provided the President with some form of reorganization authority.² S. 2129 renews most of the statutory framework³ as it existed before the authority lapsed in 1984. However, S. 2129 proposes noteworthy changes, both in terms of eliminating restrictions on the scope of a President's plan and placing additional requirements on such plans.

Unlike the 1984 version of the law, under S. 2129, the President would be permitted to propose the creation of a new department (or renaming of an existing department), the abolishment or transfer of an executive department, or the consolidation of two or more departments. There are currently fifteen departments, including the Department of State and the Department of Homeland Security.⁴ Additionally, the President would be

²Ronald C. Moe, Congressional Research Service, *The President's Reorganization Authority: Review and Analysis* (Washington, D.C.: Mar. 8, 2001).

³The Presidential reorganization authority is codified at chapter 9 of title 5 of the United States Code.

⁴See 5 U.S.C. § 101 for a list of all executive departments.

permitted to propose the creation of a new agency, a restriction which was included by the 1984 amendment of this authority.⁵

The reorganization authority proposed under this bill would permit the President, as in the 1984 version of the law, to prepare and submit to Congress reorganization plans that call for the (1) transfer of an agency or some of its functions to another agency,⁶ (2) abolishment of all or some functions of an agency, (3) consolidation of an agency or its functions or parts of an agency or some of its functions with another agency or part of another agency, (4) consolidation of part of an agency or some of its functions with another part of the same agency, or (5) authorization of an officer to delegate his or her functions.

The bill also renews most of the restrictions which have been imposed over time on the President's authority to reorganize. Such restrictions prohibit plans which (1) abolish or transfer an independent regulatory agency or all its functions, (2) consolidate two or more independent regulatory agencies or all their functions, (3) continue an agency or function beyond the period authorized by law, (4) authorize an agency to exercise a function not expressly authorized by law, (5) increase the term of an office beyond the period authorized by law, (6) deal with more than one logically consistent subject matter, or (7) abolish enforcement functions or programs established by statute. A President's submission of plans is restricted to no more than three plans pending before Congress at any time. Finally, the authority imposes a limit on the duration of the authority, which in this case is two years from enactment.

S. 2129 would impose an additional requirement that any plan permitted to go into effect must be an efficiency-enhancing plan as determined by the Office of Management and Budget (OMB). In order for a plan to be considered an efficiency-enhancing plan, the Director of OMB must determine that such plan will result in, or is likely to result in, either a decrease in the number of agencies or cost savings in performing the functions that are the subject of the plan. Therefore, this provision would allow for a consolidation that decreases the number of agencies by, for

⁵Reorganization Act Amendments of 1984, Pub. L. No. 98-614, 98 Stat. 3192 (Nov. 8, 1984).

⁶As commonly understood, an "agency" can be a component of a department or a free-standing entity (for example, the National Aeronautics and Space Administration).

example, combining two agencies into one, but does not require that the consolidation result in cost savings.

Also consistent with prior law, under S. 2129 the President's submission of a reorganization plan to Congress must include an estimate of any reduction or increase in expenditures realized as a result of the reorganizations included in the plan as well as an implementation section that describes in detail (1) actions necessary or planned to complete the reorganization, (2) the anticipated nature and substance of any orders, directives, and other administrative and operational actions which are expected to be required, (3) preliminary actions which have been taken in the implementation process, and (4) a projected timetable for completion of the implementation process.

Finally, S. 2129 renews the expedited congressional approval process as that process was modified in 1984. The 1984 amendments to the reorganization authority eliminated the procedure that allowed a President's plan to go into effect unless either house acted by passing a motion of disapproval within a fixed period of time. Under the 1984 amendments, a plan could become effective only if approved by both houses of Congress through a joint resolution (approved by the President) within 90 days after the plan is submitted to Congress.⁷ This change addressed constitutional concerns with the one-house legislative veto,⁸ and set a higher bar for success and in essence gave Congress a stronger role than under past reorganization authorities.

Under this expedited process, recommendations from the Senate Committee on Homeland Security and Governmental Affairs and the House Committee on Oversight and Government Reform to the full Senate and House must be made within 75 days and consideration of the resolution in both houses must be within 90 days from submission of the plan.⁹ Consideration is limited to an up or down vote, no amendment to a plan may be considered. The President is permitted to amend or modify

⁷Days are calculated by calendar days of continuous session of Congress.

⁸Immigration and Naturalization Service v. Chadha, 462 U.S. 919 (1983), holding the one-house legislative veto unconstitutional.

⁹This 75 day period begins once a resolution of approval has been introduced in the House and the Senate. A resolution must be introduced the first day of session following submission of a plan.

the plan at anytime within the first 60 days after submission. Any such change to a plan during this period does not impact the deadlines for congressional consideration. The authority to modify a plan allows the President to address any problems identified or concerns expressed during the pendency of a plan before Congress since a plan cannot be changed by Congress through a joint resolution.

Use of Prior Reorganization Authorities

Presidents have used reorganization authorities to submit more than 100 plans to Congress, proposing a variety of changes from minor reorganizations to major ones.¹⁰ Examples of approved Presidential plans include:

- creation of the Department of Health, Education, and Welfare, proposed by President Eisenhower in 1953 to improve the administration of health, education, and social security functions by elevating these functions to the departmental level;
- creation of the Office of Management and Budget, proposed by President Nixon in 1970, in part, to place greater emphasis on the evaluation of program performance, particularly in programs that cross agency lines, and to expand efforts to improve interagency cooperation;
- creation of the Environmental Protection Agency, proposed by President Nixon in 1970 to consolidate the federal government's environment-related activities in order to ensure the effective protection, development, and enhancement of the environment; and
- creation of the Federal Emergency Management Agency, proposed by President Carter in 1978 to improve federal emergency management and assistance by consolidating federal emergency preparedness, mitigation, and response activities.

President Carter was the last President to use this general grant of reorganization authority. During the Reagan Administration, the reorganization authority was only in place briefly at the beginning of his

¹⁰Henry B. Hogue, Congressional Research Service, *Executive Branch Reorganization Initiatives During the 112th Congress: A Brief Overview* (Washington, D.C.: Feb. 13, 2012).

first term until it lapsed, and then was reauthorized for less than two months in 1984 at the end of his first term. The authority has not been granted since then.¹¹ Although there was expressed interest during the 108th Congress in renewing this authority, from both the Administration and members of Congress, no such reauthorization was forthcoming.¹²

Balancing the Role of Congress and the Executive Branch in Developing Restructuring Proposals

A major issue for consideration for today's hearing is the question of whether and how to change Congress' normal deliberative process for reviewing and shaping executive branch reorganization proposals. Expedited reorganization authority can enable the President to propose reorganizations that are intended to increase the efficiency and effectiveness with which the government can meet existing and emerging challenges. However, all key players should be engaged in discussions about reorganizing government: the President, Congress, and other parties with vested interests, including state and local governments, the private sector, and citizens. It is important to ensure a consensus on identified problems and needs, and to be sure that the solutions our government legislates and implements can effectively remedy the problems we face in a timely manner. Fixing the wrong problems, or even worse, fixing the right problems poorly, could cause more harm than good.

It is imperative that Congress and the administration form an effective working relationship on restructuring initiatives. Any systemic changes to federal structures and functions must be approved by Congress and implemented by the executive branch, so each has a stake in the outcome. In this regard, an administration seeking expedited approval of complex government reorganization proposals could enhance its

¹¹In 1995, the President was authorized to prepare and transmit to congress a reorganization plan pursuant to this reorganization authority for reorganizing the surface transportation activities of the Department of Transportation and the relationship of the Saint Lawrence Seaway Development Corporation to the Department. Pub. L. No. 104-50, § 335, 109 Stat. 436 (Nov. 15, 1995).

¹²*Toward a Logical Governing Structure: Restoring Executive Reorganization Authority; Hearing Before House Committee on Government Reform, 108th Cong. (2003).* Moreover, during consideration of the reform of the intelligence community, the House passed version of the bill included a reauthorization of the Presidential reorganization authority which was limited to reorganization plans involving enumerated intelligence units. See, 9/11 Recommendations Implementation Act, H.R. 10, 108th Cong. § 5021 (2003). This provision was not enacted.

Successful Government
Reorganizations Balanced
Executive and Legislative
Roles

prospects for success by reaching out to Congress beforehand to ensure that congressional concerns are identified, solutions are developed, and general agreement is reached. The normal legislative process, which by design takes time to encourage thorough debate, helps to ensure that any related actions are carefully considered and have broad support. Therefore, Congress may wish to consider whether 90 days is a sufficient amount of time for Congress to review proposals and conduct its due diligence.

Even more importantly, all segments of the public that must regularly deal with their government—individuals, private sector organizations, states, and local governments—must be confident that the changes that are put in place have been thoroughly considered and that the decisions made today will make sense tomorrow. Excluding any key player increases the risk of sub-optimization or failure. Congressional deliberative processes serve the vital function of both gaining input from a variety of clientele and stakeholders affected by any changes and providing an important constitutional check and counterbalance to the executive branch.

Only Congress can decide whether it wishes to limit its powers and role in government reorganizations. In certain circumstances, Congress may deem limitations appropriate; however, care should be taken regarding the nature, timing, and scope of any related changes. Lessons can be learned from prior approaches to granting reorganization authority to the President. As discussed below, prior successful reorganization initiatives reinforce the importance of maintaining a balance between executive and legislative roles in undertaking significant organizational changes. Safeguards are needed to ensure congressional input and concurrence on the goals as well as overall reorganization proposals.

Throughout the 20th century, efforts to structure the federal government to address the economic and political concerns of the time met with varying degrees of success. The first Hoover Commission,¹³ which lasted from 1947 to 1949, is considered by many to have been the most successful of government restructuring efforts. The membership was

¹³The commission's formal name was the Commission on Organization of the Executive Branch. Its membership: Former President Herbert Hoover, Dean Acheson, Sen. George Aiken, Rep. Clarence Brown, Arthur Flemming, James A. Forrestal, Joseph P. Kennedy, Rep. Carter Manasco, Sen. John L. McClellan, George Mead, James K. Pollock, and James Rowe.

bipartisan, including members of the administration and both houses of Congress. Half its members were from outside government. The commission had a clear vision, making reorganization proposals that promoted what they referred to as “greater rationality” in the organization and operation of government agencies and enhanced the president’s role as the manager of the government—principles that were understood and accepted by both the White House and Congress.¹⁴ Former President Hoover himself guided the creation of a citizens’ committee to build public support for the commission’s work. More than 70 percent of the first Hoover Commission’s recommendations were implemented, including 26 out of 35 reorganization plans. According to a 1982 history of the Hoover Commissions “the ease with which most of the reorganization plans became effective reflected two factors: the existence of a consensus that the President ought to be given deference and assistance by Congress in meeting his managerial responsibilities and the fact that most of the reorganization plans were pretty straightforward proposals of an organizational character.”¹⁵

By contrast, the second Hoover Commission, referred to as Hoover II, which lasted from 1953 to 1954, examined policy areas with the goal of cutting government programs. However, Hoover II lacked the support of the President, who preferred to use his own advisory group¹⁶ in managing the government. It also lacked the support of Congress and the public, neither of which, according to CRS, cared to cut the government at a time when federally run programs were generally held in high esteem and considered efficient and beneficial.¹⁷ More than 60 percent of Hoover II’s recommendations were implemented, but these were mostly drawn from the commission’s technical recommendations rather than from its major ones (such as changing the government’s policies on lending, subsidies,

¹⁴Ronald C. Moe, *The Hoover Commissions Revisited* (Boulder, Colorado: Westview Press, 1982), 2.

¹⁵Ronald C. Moe, Congressional Research Service, *The President’s Reorganization Authority: Review and Analysis* (Washington, D.C.: Mar. 8, 2001).

¹⁶Called PACGO (the President’s Advisory Council on Government Organization), it was chaired by Nelson Rockefeller from 1953-1958. PACGO drafted 14 reorganization plans that were presented to the President and accepted by Congress. Ronald C. Moe, *Reorganizing the Executive Branch in the Twentieth Century: Landmark Commissions* (Washington, D.C.: Congressional Research Service, Mar. 19, 1992), 34.

¹⁷Moe, 105.

and water resources) that would have substantively cut federal programs.¹⁸

The lesson of the two Hoover Commissions is clear: if plans to reorganize government are to move from recommendation to reality, creating a consensus for them is essential to the task. In this regard, both the process employed and the players involved in making any specific reorganization proposals are of critical importance. The success of the first Hoover Commission can be tied to the involvement and commitment of both Congress and the President. Both the legislative branch and executive branches agreed to the goals. With this agreement, a process was established that provided for wide spread involvement, including citizens, and transparency so that meaningful results could be achieved.

That lesson shows up again in the experience of the Ash Council, which convened in 1969-70. Like the first Hoover Commission, the Ash Council aimed its recommendations at structural changes to enhance the effectiveness of the President as manager of the government. The Ash Council proposed organizing government around broad national purposes by integrating similar functions under major departments. It proposed that four super departments be created economic affairs, community development, natural resources, and human services—with State, Defense, Treasury, and Justice remaining in place. But the Ash Council could not gain the support of Congress. Its recommendations would have drastically altered jurisdictions within Congress and the relationships between committees and the agencies for which they had oversight responsibilities. Congress was not thoroughly clear on the implications of the four super departments, was not readily willing to change its own structure to parallel the structure proposed by the council, and was not eager to substantially strengthen the authority of the presidency.

¹⁸*Summary of the Objectives, Operations, and Results of the Commissions on Organization of the Executive Branch of the Government (First and Second Hoover Commissions)*, House Committee on Government Operations (Washington, D.C.: May 1963), 31-33.

Complexity of Government Reorganizations Require Clear Goals and Careful Implementation Planning

No matter what plans are made to reorganize the government, fulfilling the promise of these plans will depend on their effective implementation. The creation of a new organization may vary in terms of size and complexity. However, building an effective organization requires consistent and sustained leadership from top management to ensure the needed transformation of disparate agencies, programs, functions, and activities into an integrated organization. To achieve success, the end result should not simply be a collection of component units, but the transformation to an integrated, high-performance organization. The implementation of a new organization is an extremely complex task that can take years to accomplish.

In 2002, we convened a forum to identify and discuss useful practices and lessons learned from major private and public sector organizational mergers, acquisitions, and transformations that federal agencies could implement to successfully transform their cultures and a new Department of Homeland Security could use to merge its various originating components into a unified department.¹⁹ The invited participants were experienced in managing or studying large-scale organizational mergers, acquisitions, and transformations. The lessons learned and key practices gleaned from the forum provide a useful roadmap for planning the implementation of any large scale restructuring. We subsequently issued a report on the specific steps organizations can take to implement those key practices.²⁰

The research suggests that the failure to adequately address—and often even consider—a wide variety of people and cultural issues is at the heart of unsuccessful mergers, acquisitions, and transformations. But this does not have to be the case. While there is no one right way to manage a successful merger, acquisition, or transformation, the experiences of both successful and unsuccessful efforts suggest that practices that are key to their success include the following.

¹⁹GAO, *Highlights of a GAO Forum: Mergers and Transformation: Lessons Learned for a Department of Homeland Security and Other Federal Agencies*, [GAO-03-293SP](#) (Washington, D.C.: Nov. 14, 2002).

²⁰GAO, *Results-Oriented Cultures: Implementation Steps to Assist Mergers and Organizational Transformations*, [GAO-03-669](#) (Washington, D.C. July 2, 2003) provides additional information on how to implement transformational change.

Key Practices Found in Successful Mergers and Organizational Transformations

Ensure top leadership drives the transformation. Leadership must set the direction, pace, and tone and provide a clear, consistent rationale that brings everyone together behind a single mission.

Establish a clear mission and integrated strategic goals to guide the transformation. Together, these define the culture and serve as a vehicle for employees to unite and rally around.

Focus on a key set of principles and priorities at the outset of the transformation. A clear set of principles and priorities serves as a framework to help the organization create a new culture and drive employee behaviors.

Set implementation goals and a timeline to build momentum and show progress from day one. Goals and a timeline are essential because the transformation could take years to complete.

Dedicate an implementation team to manage the transformation process. A strong and stable team is important to ensure that the transformation receives the needed attention to be sustained and successful.

Use the performance management system to define responsibility and assure accountability for change. A “line of sight” shows how team, unit, and individual performance can contribute to overall organizational results.

Establish a communication strategy to create shared expectations and report related progress. The strategy must reach out to employees, customers, and stakeholders and engage them in a two-way exchange.

Involve employees to obtain their ideas and gain their ownership for the transformation. Employee involvement strengthens the process and allows them to share their experiences and shape policies.

Build a world-class organization. Building on a vision of improved performance, the organization adopts the most efficient, effective, and economical personnel, system, and process changes and continually seeks to implement best practices.

Source: GAO, *Highlights of a GAO Forum: Mergers and Transformation: Lessons Learned for a Department of Homeland Security and Other Federal Agencies*, [GAO-03-293SP](#) (Washington, D.C.: Nov. 14, 2002).

The Department of Homeland Security's (DHS) ongoing efforts to build a single, unified department illustrate the complexity and challenges of reorganizing government agencies. DHS now has more than 200,000 employees and almost \$60 billion in budget authority, and completing its transformation into a cohesive department is critical to achieving its homeland security missions. DHS has updated and strengthened its plans to resolve the department's management challenges, and has demonstrated strong leadership commitment to make improvements in these areas. However, much work remains for DHS to implement these plans and show sustained progress. We designated the implementation and transformation of DHS as high risk because, among other things, DHS had to combine 22 agencies, while ensuring no serious consequences for U.S. national and economic security. This high-risk area includes challenges in DHS's management functions—financial management, human capital, IT, and acquisitions; the effect of those challenges on implementing DHS's missions; and integrating the functions. Since the department's creation in 2003, we have issued over 1,200 products on DHS's operations in such areas as transportation security and emergency management, among others. These management challenges have had a direct impact on DHS's ability to satisfy its missions, such as delivering major acquisitions aimed at delivering important mission capabilities on time and within budget. We have made over 1,600 recommendations to DHS since its creation designed to strengthen the department's management and operations. DHS has implemented many of these recommendations and is in the process of implementing others. Furthermore, our 2011 and 2012 reports on overlapping and duplicative programs discussed later in this statement, identified additional areas where action could be taken to reduce overlap and potential unnecessary duplication.

In addition to integrating and strengthening the management of the components combined to form DHS, our work across the department has identified a number of additional observations that could be useful in informing deliberations on other government reorganizations. These include ensuring adequate and long-term transition support, identifying and addressing legacy issues that existed prior to the reorganization, and building and emphasizing partnerships and coordination mechanisms both internal and external to the new organization, among others.

Reorganization Authority Calls For a Description of Intended Performance Improvements, Estimated Savings, and an Implementation Plan

Given the complex challenges associated with government restructurings, it is important to note that S. 2129 would renew the requirement that the President submit as part of a reorganization plan a description of what it intends to achieve and a plan for implementation. Specifically, the President must estimate any reduction or increase in expenditures (itemized so far as practicable), and describe any improvements in management, delivery of federal services, execution of the laws, and increases in efficiency of government operations, which it is expected will be realized as a result of the reorganizations included in the plan. The implementation section must describe in detail the actions necessary or planned to complete the reorganization, the anticipated nature and substance of any orders, directives, and other administrative and operational actions which are expected to be required for completing or implementing the reorganization, and any preliminary actions which have been taken in the implementation process. It must also contain a projected timetable for completion of the implementation process. These requirements are broadly consistent with some of the aforementioned practices key to successful organizational transformations. The required implementation plan will be most useful to the extent that it covers all of the key practices in at least a preliminary form.

This provision, if implemented properly, could provide useful benchmarks for Congress to use in deciding whether the plan is feasible, whether the Administration has carefully considered the complex implementation issues, and if it will produce sufficient benefits to merit the changes being proposed.

Oversight of Implementation

Congressional involvement is needed not just in the initial design of the organization, but in what can turn out to be a lengthy period of implementation. Congress has an important role to play—both in its legislative and oversight capacities—in establishing, monitoring, and maintaining progress to attain the goals envisioned by government transformation and reorganization efforts. Sustained oversight by Congress is needed to ensure the reorganization is accomplishing its goals and to determine whether it needs further refinement. Assessing progress is important to ensuring implementation is moving in the right direction.

To ensure effective implementation, along with efficient and effective oversight, Congress may need to consider realigning its own structure. For example, the legislation which established DHS instructed both houses of Congress to review their committee structures in light of the reorganization of homeland security responsibilities within the executive

branch. This led to an expansion of the responsibilities of this committee in the Senate, and the formation of the Committee on Homeland Security in the House. However, these committees share oversight of DHS with many other congressional committees and subcommittees.

GPRA Modernization Act Provides Another Tool to Reexamine Government Programs and Improve Coordination

Many federal efforts, including those related to protecting food and agriculture, providing homeland security, and ensuring a well trained and educated workforce, transcend more than one agency, yet agencies face a range of challenges and barriers when they attempt to work collaboratively. Both Congress and the executive branch have recognized this, and in January 2011, the GPRA Modernization Act of 2010 (the Act) was enacted, updating the almost two-decades-old Government Performance and Results Act. The Act establishes a new framework aimed at taking a more crosscutting and integrated approach to focusing on results and improving government performance. Effective implementation of the Act could play an important role in clarifying desired outcomes, addressing program performance spanning multiple organizations, and facilitating future actions to reduce unnecessary duplication, overlap, and fragmentation.

The Act requires OMB to coordinate with agencies to establish outcome-oriented goals covering a limited number of crosscutting policy areas as well as goals to improve management across the federal government, and to develop a government-wide performance plan for making progress toward achieving those goals. The performance plan is to, among other things, identify the agencies and federal activities—including spending programs, tax expenditures, and regulations—that contribute to each goal, and establish performance indicators to measure overall progress toward these goals as well as the individual contribution of the underlying agencies and federal activities. The President's budget for fiscal year 2013 includes 14 such crosscutting goals, including Science, Technology, Engineering, and Math Education, Entrepreneurship and Small Businesses, Job Training, Cybersecurity, Information Technology Management, Procurement and Acquisition Management, and Real Property Management. The Act also requires similar information at the agency level. Each agency is to identify the various federal organizations and activities—both within and external to the agency—that contribute to its goals, and describe how the agency is working with other agencies to achieve its goals as well as any relevant crosscutting goals.

Reducing Duplication, Overlap, and Fragmentation Can Improve Government Efficiency and Effectiveness

In our series of reports on the topic to date, we have identified a number of areas of potential duplication, overlap, or fragmentation, as well as opportunities for agencies or Congress to consider taking action that could either reduce the cost of government operations or enhance revenue collections for the Treasury. For example, our 2012 annual report presents 51 areas where programs may be able to achieve greater efficiencies or become more effective in providing government services.²¹ We have also continued to monitor developments in the 81 areas that we identified a year ago in the first report we issued in this series.²² Our 2011 follow-up report describes the extent to which progress has been made to address these areas.²³ Appendix I presents a summary of our assessment of the overall progress made in each of the 81 areas. Collectively, our 2011 and 2012 annual reports show that, if the actions are implemented, the government could potentially save tens of billions of dollars annually.

2012 Annual Report Identified 51 Opportunity Areas

In our 2012 annual report, we identified a total of 51 areas, including 32 areas of potential duplication, overlap, or fragmentation, as well as 19 opportunities for agencies or Congress to consider taking action that could either reduce the cost of government operations or enhance revenue collections for the Treasury. These areas involve a wide range of government missions including agriculture, defense, economic development, education, energy, general government, health, homeland security, international affairs, science and the environment, and social services. Within and across these missions, the 2012 annual report touches on virtually all major federal departments and agencies. We expanded the scope of our work for this year's report to focus on areas where a mix of federal approaches is used, such as tax expenditures, direct spending, and federal grant or loan programs.

²¹GAO, *2012 Annual Report: Opportunities to Reduce Duplication, Overlap and Fragmentation, Achieve Savings, and Enhance Revenue*, [GAO-12-342SP](#) (Washington, D.C.: Feb. 28, 2012).

²²GAO, *Opportunities to Reduce Potential Duplication in Government Programs, Save Tax Dollars, and Enhance Revenue*, [GAO-11-318SP](#) (Washington, D.C.: Mar. 1, 2011).

²³GAO, *Follow-up on 2011 Report: Status of Actions Taken to Reduce Duplication, Overlap, and Fragmentation, Save Tax Dollars, and Enhance Revenue*, [GAO-12-453SP](#) (Washington, D.C.: Feb. 28, 2012).

We summarized 32 areas where government missions are fragmented across multiple agencies or programs; agencies, offices, or initiatives may have similar or overlapping objectives or may provide similar services to similar populations or target similar users; and when two or more agencies or programs are engaged in the same activities or provide the same services to the same beneficiaries (see table 1). We found instances where multiple government programs or activities have led to inefficiencies, and we determined that greater efficiencies or effectiveness might be achievable.

Table 1: Duplication, Overlap, and Fragmentation Areas Identified

Mission	Areas identified
Agriculture	1. Protection of Food and Agriculture: Centrally coordinated oversight is needed to ensure nine federal agencies effectively and efficiently implement the nation's fragmented policy to defend the food and agriculture systems against potential terrorist attacks and major disasters.
Defense	2. Electronic Warfare: Identifying opportunities to consolidate Department of Defense airborne electronic attack programs could reduce overlap in the department's multiple efforts to develop new capabilities and improve the department's return on its multibillion-dollar acquisition investments. 3. Unmanned Aircraft Systems: Ineffective acquisition practices and collaboration efforts in the Department of Defense unmanned aircraft systems portfolio creates overlap and the potential for duplication among a number of current programs and systems. 4. Counter-Improvised Explosive Device Efforts: The Department of Defense continues to risk duplication in its multibillion-dollar counter-improvised explosive device efforts because it does not have a comprehensive database of its projects and initiatives. 5. Defense Language and Culture Training: The Department of Defense needs a more integrated approach to reduce fragmentation in training approaches and overlap in the content of training products acquired by the military services and other organizations. 6. Stabilization, Reconstruction, and Humanitarian Assistance Efforts: Improving the Department of Defense's evaluations of stabilization, reconstruction, and humanitarian assistance efforts, and addressing coordination challenges with the Department of State and the U.S. Agency for International Development, could reduce overlapping efforts and result in the more efficient use of taxpayer dollars.
Economic development	7. Support for Entrepreneurs: Overlap and fragmentation among the economic development programs that support entrepreneurial efforts require the Office of Management and Budget and other agencies to better evaluate the programs and explore opportunities for program restructuring, which may include consolidation, within and across agencies. 8. Surface Freight Transportation: Fragmented federal programs and funding structures are not maximizing the efficient movement of freight.
Energy	9. Department of Energy Contractor Support Costs: The Department of Energy should assess whether further opportunities could be taken to streamline support functions, estimated to cost over \$5 billion, at its contractor-managed laboratory and nuclear production and testing sites, in light of contractors' historically fragmented approach to providing these functions. 10. Nuclear Nonproliferation: Comprehensive review needed to address strategic planning limitations and potential fragmentation and overlap concerns among programs combating nuclear smuggling overseas.

Mission	Areas identified
General government	<p>11. Personnel Background Investigations: The Office of Management and Budget should take action to prevent agencies from making potentially duplicative investments in electronic case management and adjudication systems.</p> <p>12. Cybersecurity Human Capital: Governmentwide initiatives to enhance the cybersecurity workforce in the federal government need better structure, planning, guidance, and coordination to reduce duplication.</p> <p>13. Spectrum Management: Enhanced coordination of federal agencies' efforts to manage radio frequency spectrum and an examination of incentive mechanisms to foster more efficient spectrum use may aid regulators' attempts to jointly respond to competing demands for spectrum while identifying valuable spectrum that could be auctioned for commercial use, thereby generating revenues for the U.S. Treasury.</p>
Health	<p>14. Health Research Funding: The National Institutes of Health, Department of Defense, and Department of Veterans Affairs can improve sharing of information to help avoid the potential for unnecessary duplication.</p> <p>15. Military and Veterans Health Care: The Departments of Defense and Veterans Affairs need to improve integration across care coordination and case management programs to reduce duplication and better assist servicemembers, veterans, and their families.</p>
Homeland security/Law enforcement	<p>16. Department of Justice Grants: The Department of Justice could improve how it targets nearly \$3.9 billion to reduce the risk of potential unnecessary duplication across the more than 11,000 grant awards it makes annually.</p> <p>17. Homeland Security Grants: The Department of Homeland Security needs better project information and coordination among four overlapping grant programs.</p> <p>18. Federal Facility Risk Assessments: Agencies are making duplicate payments for facility risk assessments by completing their own assessments, while also paying the Department of Homeland Security for assessments that the department is not performing.</p>
Information technology	<p>19. Information Technology Investment Management: The Office of Management and Budget, and the Departments of Defense and Energy need to address potentially duplicative information technology investments to avoid investing in unnecessary systems.</p>
International affairs	<p>20. Overseas Administrative Services: U.S. government agencies could lower the administrative cost of their operations overseas by increasing participation in the International Cooperative Administrative Support Services system and by reducing reliance on American officials overseas to provide these services.</p> <p>21. Training to Identify Fraudulent Travel Documents: Establishing a formal coordination mechanism could help reduce duplicative activities among seven different entities that are involved in training foreign officials to identify fraudulent travel documents.</p>
Science and the environment	<p>22. Coordination of Space System Organizations: Fragmented leadership has led to program challenges and potential duplication in developing multibillion-dollar space systems.</p> <p>23. Space Launch Contract Costs: Increased collaboration between the Department of Defense and the National Aeronautics and Space Administration could reduce launch contracting duplication.</p> <p>24. Diesel Emissions: Fourteen grant and loan programs at the Department of Energy, Department of Transportation, and the Environmental Protection Agency, and three tax expenditures fund activities that have the effect of reducing mobile source diesel emissions; enhanced collaboration and performance measurement could improve these fragmented and overlapping programs.</p> <p>25. Environmental Laboratories: The Environmental Protection Agency needs to revise its overall approach to managing its 37 laboratories to address potential overlap and fragmentation and more fully leverage its limited resources.</p>

Mission	Areas identified
	26. Green Building: To evaluate the potential for overlap or fragmentation among federal green building initiatives, the Department of Housing and Urban Development, the Department of Energy, and the Environmental Protection Agency should lead other federal agencies in collaborating on assessing their investments in more than 90 initiatives to foster green building in the nonfederal sector.
Social services	27. Social Security Benefit Coordination: Benefit offsets for related programs help reduce the potential for overlapping payments but pose administrative challenges. 28. Housing Assistance: Examining the benefits and costs of housing programs and tax expenditures that address the same or similar populations or areas, and potentially consolidating them, could help mitigate overlap and fragmentation and decrease costs.
Training, employment, and education	29. Early Learning and Child Care: The Departments of Education and Health and Human Services should extend their coordination efforts to other federal agencies with early learning and child care programs to mitigate the effects of program fragmentation, simplify children's access to these services, collect the data necessary to coordinate operation of these programs, and identify and minimize any unwarranted overlap and potential duplication. 30. Employment for People with Disabilities: Better coordination among 50 programs in nine federal agencies that support employment for people with disabilities could help mitigate program fragmentation and overlap, and reduce the potential for duplication or other inefficiencies. 31. Science, Technology, Engineering, and Mathematics Education: Strategic planning is needed to better manage overlapping programs across multiple agencies. 32. Financial Literacy: Overlap among financial literacy activities makes coordination and clarification of roles and responsibilities essential, and suggests potential benefits of consolidation.

Source: GAO-12-342SP.

Overlap and fragmentation among government programs or activities can be harbingers of unnecessary duplication. In many cases, the existence of unnecessary duplication, overlap, or fragmentation can be difficult to determine with precision due to a lack of data on programs and activities. Where information has not been available that would provide conclusive evidence of duplication, overlap, or fragmentation, we often refer to “potential duplication” and, where appropriate, we suggest actions that agencies or Congress could take to either reduce that potential or to make programmatic data more reliable or transparent. In some instances of duplication, overlap, or fragmentation, it may be appropriate for multiple agencies or entities to be involved in the same programmatic or policy area due to the nature or magnitude of the federal effort. For issues where information is being reported on for the first time in the 2012 annual report, we sought comments from the agencies involved, and incorporated those comments as appropriate.

Among the 32 areas highlighted in our 2012 annual report are the following examples of opportunities for agencies or Congress to consider

taking action to reduce unnecessary duplication, overlap, or fragmentation.

- *Unmanned Aircraft Systems*: The Department of Defense (DOD) estimates that the cost of current Unmanned Aircraft Systems (UAS) acquisition programs and related systems will exceed \$37.5 billion in fiscal years 2012 through 2016. The elements of DOD's planned UAS portfolio include unmanned aircraft, payloads (subsystems and equipment on a UAS configured to accomplish specific missions), and ground control stations (equipment used to handle multiple mission aspects such as system command and control). We have found that ineffective acquisition practices and collaboration efforts in DOD's UAS portfolio creates overlap and the potential for duplication among a number of current programs and systems. We have also highlighted the need for DOD to consider commonality in UAS—using the same or interchangeable subsystems and components in more than one subsystem to improve interoperability of systems—to reduce the likelihood of redundancies in UAS capabilities.

Military service-driven requirements—rather than an effective departmentwide strategy—have led to overlap in DOD's UAS capabilities, resulting in many programs and systems being pursued that have similar flight characteristics and mission requirements. Illustrative of the overlap, the Department of the Navy (Navy) plans to spend more than \$3 billion to develop the Broad Area Maritime Surveillance UAS, rather than the already fielded Air Force Global Hawk system on which it was based. According to the Navy, its unique requirements necessitate modifications to the Global Hawk airframe, payload interfaces, and ground control station. However, the Navy program office was not able to provide quantitative analysis to justify the variant. According to program officials, no analysis was conducted to determine the cost effectiveness of developing the Broad Area Maritime Surveillance UAS to meet the Navy's requirements versus buying more Global Hawks.

The potential for overlap also exists among UAS subsystems and components, such as sensor payloads and ground control stations. DOD expects to spend about \$9 billion to buy 42 UAS sensor payloads through fiscal year 2016. While the fact that some multiservice payloads are being developed shows the potential for collaboration, the service-centric requirements process still creates the potential for overlap, including 29 sensors in our review. Further, we identified overlap and potential duplication among 10 of 13 ground control stations that DOD plans to acquire at a cost of about \$3 billion through fiscal year 2016. According to a cognizant DOD official, the associated software is about 90 percent

duplicative because similar software is developed for each ground control station. DOD has created a UAS control segment working group, which is chartered to increase interoperability and enable software re-use and open systems. This could allow for greater efficiency, less redundancy, and lower costs, while potentially reducing levels of contractor proprietary data that cannot be shared across UAS programs. However, existing ground control stations already have their own architecture and migration to a new service-oriented architecture will not happen until at least 2015, almost 6 years after it began.

DOD plans to significantly expand the UAS portfolio through 2040, including five new systems in the planning stages that are expected to become formal programs in the near future. While DOD has acknowledged that many UAS systems were acquired inefficiently and has begun to take steps to improve outcomes as it expands these capabilities over the next several years, the department faces challenges in its ability to improve efficiency and reduce the potential for overlap and duplication as it buys UAS capabilities. For example, the Army and Navy are planning to spend approximately \$1.6 billion to acquire separate systems that are likely to have similar capabilities to meet upcoming cargo and surveillance requirements. DOD officials state that current requirements do not preclude a joint program to meet these needs, but the Army and Navy have not yet determined whether such an approach will be used.

To reduce the likelihood of overlap and potential duplication in its UAS portfolio, we have made several prior recommendations to DOD which have not been fully implemented. While DOD generally agreed with our recommendations, the overlap in current UAS programs, as well as the continued potential in future programs, shows that DOD must still do more to implement them. In particular, we have recommended that DOD (1) re-evaluate whether a single entity would be better positioned to integrate all crosscutting efforts to improve the management and operation of UAS; (2) consider an objective, independent examination of current UAS portfolio requirements and the methods for acquiring future unmanned aircraft; and (3) direct the military services to identify specific areas where commonality can be achieved. We believe the potential for savings is significant and with DOD's renewed commitment to UAS for meeting new strategic requirements, all the more imperative.

- *Housing assistance*: In fiscal year 2010, the federal government incurred about \$170 billion in obligations for housing-related programs and estimated revenue forgone for tax expenditures of which tax expenditures

represent \$132 billion (about 78 percent). Support for homeownership in the current economic climate has expanded dramatically with nearly all mortgage originations having direct or indirect federal assistance. The Department of the Treasury (Treasury) and the Board of Governors of the Federal Reserve System together invested more than \$1.67 trillion in Fannie Mae and Freddie Mac, the government-sponsored enterprises, which issue and guarantee mortgage-backed securities. Examining the benefits and costs of housing programs and tax expenditures that address the same or similar populations or areas, and potentially consolidating them, could help mitigate overlap and fragmentation and decrease costs.

We identified 20 different entities that administer 160 programs, tax expenditures, and other tools that supported homeownership and rental housing in fiscal year 2010. In addition, we identified 39 programs, tax expenditures, and other tools that provide assistance for buying, selling, or financing a home and eight programs and tax expenditures that provide assistance to rental property owners. We found overlap in products offered and markets served by the Department of Agriculture's (USDA) Rural Housing Service (RHS) and the Department of Housing and Urban Development's (HUD) Federal Housing Administration (FHA), among others. In September 2000 and again as part of our ongoing work, we questioned the need for maintaining separate programs for rural areas. In September 2000, we recommended that Congress consider requiring USDA and HUD to examine the benefits and costs of merging programs, such as USDA's and HUD's single-family guaranteed loan and multifamily portfolio management programs.²⁴

While USDA and HUD have raised concerns about merging programs, our recent work has shown increased evidence of overlap and that some RHS and FHA programs can be consolidated. For example, the two agencies overlap in products offered (mortgage credit and rental assistance), functions performed (portfolio management and preservation), and geographic areas served. Specifically, RHS and HUD guarantee single-family and multifamily loans, as well as offer rental subsidies using similar income eligibility criteria. And, both agencies have been working to maintain and preserve existing multifamily portfolios. Although RHS may offer its products only in rural areas, it is not always

²⁴GAO, *Rural Housing: Options for Optimizing the Federal Role in Rural Housing Development*, GAO/RCED-00-241 (Washington, D.C.: Sept. 15, 2000).

the insurer of choice in those areas. For example, in fiscal year 2009 FHA insured over eight times as many single-family loans in economically distressed rural counties as RHS guaranteed. And, many RHS loan guarantees financed properties near urban areas—56 percent of single-family guarantees made in fiscal year 2009 were in metropolitan counties.

Regarding consolidation, we found that RHS relies on more in-house staff to oversee its single-family and multifamily loan portfolio of about \$93 billion than HUD relies on to manage its single-family and multifamily loan portfolio of more than \$1 trillion, largely because of differences in how the programs are administered. RHS has a decentralized structure of about 500 field offices that was set up to interact directly with borrowers. RHS relies on over 1,600 full-time equivalent staff to process and service its direct single-family loans and grants. While RHS limits its direct loans to low income households and its guaranteed loans to moderate income households, FHA has no income limits and does not offer a comparable direct loan program. HUD operates about 80 field offices and primarily interacts through lenders, nonprofits, and other intermediaries. RHS and FHA programs both utilize FHA-approved lenders and underwriting processes based on FHA's scorecard—an automated tool that evaluates new mortgage loans. RHS has about 530 full-time equivalent staff to process its single-family guaranteed loans. FHA relies on lenders to process its loans. Although FHA insures far more mortgages than RHS guarantees, FHA has just over 1,000 full-time equivalent staff to oversee lenders and appraisers and contractors that manage foreclosed properties. While the number of RHS field offices decreased by about 40 percent since 2000, its decentralized field structure continues to reflect the era in which it was established—the 1930s, when geography and technology greatly limited communication and transportation. These limitations have diminished and HUD programs can be used in all areas of the country.

We first recommended in September 2000—and have followed up since then—that Congress consider requiring USDA and HUD to examine the benefits and costs of merging those programs that serve similar markets and provide similar products, and require these same agencies to explore merging their single family insured lending and multifamily portfolio management programs. At that time, USDA stated that some of the suggestions made in our report to improve the effectiveness of current programs may better serve rural areas. However, USDA also stated that the gap in housing affordability between rural and urban areas, as well as the importance of rural housing programs to the Department's broader Rural Development mission area, would make merging RHS's programs

with HUD's programs unfeasible and detrimental to rural America. HUD also stated that it believes any opportunity to improve the delivery of rural housing services should be explored, but stated that the differences between RHS's and FHA's single-family programs are sizable and that without legislative changes to product terms, efforts to merge the programs would likely result in a more cumbersome rather than a more efficient delivery system. HUD added that it had been working with USDA in a mutual exchange of information on best practices and would explore possible avenues of coordination.

The agencies have been working to align certain requirements of the various multifamily housing programs. In addition, in February 2011, the Administration reported to Congress that it would establish a task force to evaluate the potential for coordinating or consolidating the housing loan programs of HUD, USDA, and the Department of Veterans Affairs (VA). According to HUD, a benchmarking effort associated with the task force was recently begun. Our ongoing work considers options for consolidating these programs and we expect to make additional related recommendations.

Furthermore, Treasury and the Internal Revenue Service (IRS) provide numerous types of housing assistance through tax expenditures. Although often necessary to meet federal priorities, some tax expenditures can contribute to mission fragmentation and program overlap that, in turn, can create service gaps, additional costs, and the potential for duplication. For example, to qualify for a historic preservation tax credit, rehabilitation must preserve historic character, which may conflict with states' efforts to produce energy-efficient, low-income properties with tax credits, and could increase project costs.

We recommended in September 2005 and reiterated in March 2011 that coordinated reviews of tax expenditures with related spending programs could help policymakers reduce overlap and inconsistencies and direct scarce resources to the most-effective or least-costly methods to deliver federal support.²⁵ Specifically, we recommended that the Director of OMB, in consultation with the Secretary of the Treasury, develop and implement a framework for conducting performance reviews of tax

²⁵See GAO, *Government Performance and Accountability: Tax Expenditures Represent a Substantial Federal Commitment and Need to Be Reexamined*, [GAO-05-690](#) (Washington, D.C.: Sept. 23, 2005) and [GAO-11-318SP](#).

expenditures. OMB, citing methodological and conceptual issues, disagreed with our 2005 recommendations. To date, OMB had not used its budget and performance review processes to systematically review tax expenditures and promote integrated reviews of related tax and spending programs. However, in its fiscal year 2012 budget guidance, OMB instructed agencies, where appropriate, to analyze how to better integrate tax and spending policies with similar objectives and goals. The GPRA Modernization Act of 2010 also envisions such an approach for selected cross-cutting areas. Such an analysis could help identify redundancies.

- *Military and veterans health care:* We found that DOD and VA need to improve integration across care coordination and case management programs to reduce duplication and better assist servicemembers, veterans, and their families. DOD and VA have care coordination²⁶ and case management²⁷ programs that are intended to provide continuity of care for wounded, ill, and injured servicemembers and veterans. DOD and VA established the Wounded, Ill, and Injured Senior Oversight Committee (Senior Oversight Committee) to address identified problems in providing care to wounded, ill, and injured servicemembers as well as veterans. Under the purview of this committee, the departments developed the Federal Recovery Coordination Program (FRCP), a joint program administered by VA that was designed to coordinate clinical and nonclinical services for “severely” wounded, ill, and injured servicemembers—who are most likely to be medically separated from the military—across DOD, VA, other federal agencies, states, and the private sector. Separately, the Recovery Coordination Program (RCP) was established in response to the National Defense Authorization Act for Fiscal Year 2008 to improve the care, management, and transition of recovering servicemembers. It is a DOD-specific program that was designed to provide nonclinical care coordination to “seriously” wounded, ill, and injured servicemembers, who may return to active duty unlike those categorized as “severely” wounded, ill, or injured. The RCP is

²⁶According to the National Coalition on Care Coordination, care coordination is a client-centered, assessment-based interdisciplinary approach to integrating health care and social support services in which an individual’s needs and preferences are assessed, a comprehensive care plan is developed, and services are managed and monitored by an identified care coordinator.

²⁷According to the Case Management Society of America, case management is defined as a collaborative process of assessment, planning, facilitation, and advocacy for options and services to meet an individual’s health needs through communication and available resources to promote quality, cost-effective outcomes.

implemented separately by each of the military services, most of which have implemented the RCP within their existing wounded warrior programs.²⁸

As a result of these multiple efforts, many recovering servicemembers and veterans are enrolled in more than one care coordination or case management program, and they may have multiple care coordinators and case managers, potentially duplicating agencies' efforts and reducing the effectiveness and efficiency of the assistance they provide. For example, recovering servicemembers and veterans who have a care coordinator also may be enrolled in one or more of the multiple DOD or VA programs that provide case management services to "seriously" and "severely" wounded, ill, and injured servicemembers, veterans, and their families. These programs include the military services' wounded warrior programs and VA's Operation Enduring Freedom/Operation Iraqi Freedom Care Management Program, among others.

We found that inadequate information exchange and poor coordination between these programs have resulted in not only duplication of effort, but confusion and frustration for enrollees, particularly when case managers and care coordinators duplicate or contradict one another's efforts. For example, an FRCP coordinator told us that in one instance there were five case managers working on the same life insurance issue for an individual. In another example, an FRCP coordinator and an RCP coordinator were not aware the other was involved in coordinating care for the same servicemember and had unknowingly established conflicting recovery goals for this individual. In this case, a servicemember with multiple amputations was advised by his FRCP coordinator to separate from the military in order to receive needed services from VA, whereas his RCP coordinator set a goal of remaining on active duty. These conflicting goals caused considerable confusion for this servicemember and his family.

DOD and VA have been unsuccessful in jointly developing options for improved collaboration and potential integration of the FRCP and RCP care coordination programs, although they have made a number of attempts to

²⁸The Navy, Air Force, and Marine Corps have all implemented the RCP within their existing wounded warrior programs. The Army and the U.S. Special Operations Command provide services that meet the requirements of the RCP, although they did not specifically implement this program.

do so. Despite the identification of various options, no final decisions to revamp, merge, or eliminate programs have been agreed upon.

The need for better collaboration and integration extends beyond the FRCP and RCP to also encompass other DOD and VA case management programs, such as DOD's wounded warrior programs that also serve seriously and severely wounded, ill, and injured servicemembers and veterans. In October 2011, we recommended that the Secretaries of Defense and Veterans Affairs direct the co-chairs of the Senior Oversight Committee to expeditiously develop and implement a plan to strengthen functional integration across all DOD and VA care coordination and case management programs that serve recovering servicemembers, veterans, and their families, including—but not limited to—the FRCP and RCP.²⁹ DOD and VA provided technical comments on the report, but neither specifically commented on our recommendation. We plan to track the extent to which progress has been made to address our recommendation.

- *Information technology investment management:* OMB reported that in fiscal year 2011, there were approximately 7,200 information technology (IT) investments totaling at least \$79 billion. OMB provides guidance to agencies on how to report on their IT investments and requires agencies to identify each investment by a single functional category and sub-category. These categorizations are intended to enable OMB and others to analyze investments with similar functions, as well as identify and analyze potentially duplicative investments across agencies. We found that DOD and the Department of Energy (DOE) need to address potentially duplicative IT investments to avoid investing in unnecessary systems.

In February 2012, we completed a review that examined the 3 largest categories of IT investments within DOD, DOE, and the Department of Homeland Security (DHS) and found that although the departments use various investment review processes to identify duplicative investments, 37 of our sample of 810 investments were potentially duplicative at DOD

²⁹GAO, *DOD and VA Health Care: Action Needed to Strengthen Integration across Care Coordination and Case Management Programs*, [GAO-12-129T](#) (Washington, D.C.: Oct. 6, 2011).

and DOE.³⁰ These investments account for about \$1.2 billion in IT spending for fiscal years 2007 through 2012 for these two agencies. We found that DOD and DOE had recently initiated specific plans to address potential duplication in many of the investments we identified—such as plans to consolidate or eliminate systems—but these initiatives had not yet led to the consolidation or elimination of duplicative investments or functionality.

In addition, while we did not identify any potentially duplicative investments at DHS within our sample, DHS officials have independently identified several duplicative investments and systems. DHS has plans to further consolidate systems within these investments by 2014, which it expects to produce approximately \$41 million in cost savings. DHS officials have also identified 38 additional systems that they have determined to be duplicative.

Further complicating agencies' ability to identify and eliminate duplicative investments is that investments are, in certain cases, misclassified by function. For example, one of DHS's Federal Emergency Management Agency (FEMA) investments was initially categorized within the Employee Performance Management sub-function, but DHS agreed that this investment should be assigned to the Human Resources Development sub-function. Proper categorization is necessary in order to analyze and identify duplicative IT investments, both within and across agencies.

In February 2012, we recommended that the Secretaries of DOD and DOE direct their Chief Information Officers to utilize existing transparency mechanisms to report on the results of their efforts to identify and eliminate, where appropriate, each potentially duplicative investment that we identified, as well as any other duplicative investments. The agencies agreed with our recommendation. We also recommended that DOD, DOE, and DHS correct the miscategorizations of the investments we identified and ensure that investments are correctly categorized in agency submissions, which would enhance the agencies' ability to identify opportunities to consolidate or eliminate duplicative investments. DOD and DHS agreed with our recommendation, but DOE disagreed that two of the four investments we identified were miscategorized, explaining that its

³⁰GAO, *Information Technology: Departments of Defense and Energy Need to Address Potentially Duplicative Investments*, [GAO-12-241](#) (Washington, D.C.: Feb. 17, 2012).

categorizations reflect funding considerations. However, OMB guidance indicates that investments should be classified according to their intended purpose. Consequently, we believe the recommendation is warranted.

- *Department of Homeland Security grants:* From fiscal years 2002 through 2011, FEMA, under DHS, allocated about \$20.3 billion to grant recipients through four specific programs (the State Homeland Security Program, Urban Areas Security Initiative, Port Security Grant Program, and Transit Security Grant Program) to enhance the capacity of states, localities, and other entities, such as ports or transit agencies, to prevent, respond to, and recover from a terrorism incident. We found that DHS needs better project information and coordination to identify and mitigate potential unnecessary duplication among four overlapping grant programs.

In February 2012, we identified multiple factors that contributed to the risk of FEMA potentially funding unnecessarily duplicative projects across these four grant programs. These factors include overlap among grant recipients, goals, and geographic locations, combined with differing levels of information that FEMA had available regarding grant projects and recipients.³¹ We also reported that FEMA lacked a process to coordinate application reviews across the four grant programs and grant applications were reviewed separately by program and were not compared across each other to determine where possible unnecessary duplication may occur. Specifically, FEMA's Homeland Security Grant Program branch administered the Urban Areas Security Initiative and State Homeland Security Program while the Transportation Infrastructure Security branch administered the Port Security Grant Program and Transit Security Grant Program. We and the DHS Inspector General have concluded that coordinating the review of grant projects internally would give FEMA more complete information about applications across the four grant programs, which could help FEMA identify and mitigate the risk of unnecessary duplication across grant applications.³²

We also identified actions FEMA could take to identify and mitigate any unnecessary duplication in these programs, such as collecting more

³¹GAO, *Homeland Security: DHS Needs Better Project Information and Coordination among Four Overlapping Grant Programs*, [GAO-12-303](#) (Washington, D.C.: Feb. 28, 2012).

³²Department of Homeland Security Office of Inspector General, *Efficacy of DHS Grant Programs*, OIG-1069 (Washington, D.C.: Mar. 22, 2010).

complete project information as well as exploring opportunities to enhance FEMA's internal coordination and administration of the programs. We suggested that Congress may wish to consider requiring DHS to report on the results of its efforts to identify and prevent duplication within and across the four grant programs, and consider these results when making future funding decisions for these programs.

- *Science, Technology, Engineering, and Math education programs:* Federal agencies obligated \$3.1 billion in fiscal year 2010 on Science, Technology, Engineering, and Mathematics (STEM) education programs. These programs can serve an important role both by helping to prepare students and teachers for careers in STEM fields and by enhancing the nation's global competitiveness. In addition to the federal effort, state and local governments, universities and colleges, and the private sector have also developed programs that provide opportunities for students to pursue STEM education and occupations. Recently, both Congress and the administration have called for a more strategic and effective approach to the federal government's investment in STEM education. For example, Congress directed the Office of Science and Technology Policy, within the Executive Office of the President, to establish a committee under its component National Science and Technology Council to, among other things, develop a 5-year governmentwide STEM education strategic plan and identify areas of duplication among federal programs.³³ We found that strategic planning is needed to better manage overlapping programs across multiple agencies.

In January 2012, we reported that 173 of the 209 (83 percent) STEM education programs administered by 13 federal agencies overlapped to some degree with at least 1 other program in that they offered similar services to target groups—such as K-12 students, postsecondary students, K-12 teachers, and college faculty and staff—to achieve similar objectives.³⁴ These overlapping programs largely resulted from federal efforts to both create and expand programs across many agencies in an effort to improve STEM education and increase the number of students going into related fields. Overlapping programs can lead to individuals and institutions being eligible for similar services in similar STEM fields

³³Pub. L. No. 111-358, § 101, 124 Stat. 3982, 3984 (2011).

³⁴GAO, *Science, Technology, Engineering, and Mathematics Education: Strategic Planning Needed to Better Manage Overlapping Programs across Multiple Agencies*, [GAO-12-108](#) (Washington, D.C.: Jan. 20, 2012).

offered through multiple programs. For example, 177 of the 209 programs (85 percent) were primarily intended to serve two or more target groups. Overlap can frustrate federal officials' efforts to administer programs in a comprehensive manner, limit the ability of decision makers to determine which programs are most cost-effective, and ultimately increase program administrative costs.

Even when programs overlap, the services they provide and the populations they serve may differ in meaningful ways and would therefore not necessarily be duplicative. There may be important differences between the specific STEM field of focus and the program's stated goals. For example, we identified 31 programs that provided scholarships or fellowships to doctoral students in the field of physics. However, one program's goal was to increase environmental literacy related to estuaries and coastal watersheds while another program focused on supporting education in nuclear science, engineering, and related trades. In addition, programs may be primarily intended to serve different specific populations within a given target group. Of the 34 programs providing services to K-12 students in the field of technology, 10 are primarily intended to serve specific underrepresented, minority, or disadvantaged groups and 2 are limited geographically to individual cities or universities.

However, little is known about the effectiveness of federal STEM education programs. Since 2005, when we first reported on this issue, we have found that the majority of programs have not conducted comprehensive evaluations of how well their programs are working. Agency and program officials would benefit from guidance and information sharing within and across agencies about what is working and how to best evaluate programs. This would not only help to improve individual program performance, but could also inform agency- and governmentwide decisions about which programs should continue to be funded. Furthermore, although the National Science and Technology Council is in the process of developing a governmentwide strategic plan for STEM education, we found that agencies have not used outcome measures for STEM programs in a way that is clearly reflected in their own performance plans and performance reports—key strategic planning documents. The absence of clear links between the programs and agencies' planning documents may hinder decision makers' ability to assess how agencies' STEM efforts contribute to agencywide performance goals and the overall federal STEM effort.

We reported in January 2012 that numerous opportunities exist to improve the planning for STEM programs. For example, we

recommended that the National Science and Technology Council develop guidance for how agencies can better incorporate governmentwide STEM education strategic plan goals and their STEM education efforts into their respective performance plans and reports, as well as determining the types of evaluations that may be feasible and appropriate for different types of STEM education programs. We also recommended that the National Science and Technology Council work with agencies, through the strategic planning process, to identify STEM education programs that might be candidates for consolidation or elimination. OMB stated that our recommendations are critical to improving the provision of STEM education across the federal government. In separate comments, the Office of Science and Technology Policy said its own analysis of STEM education programs identified no duplicative programs and where it identified overlapping programs it found that some program characteristics differed. As an illustration, the Office of Science and Technology Policy explained that there could be two STEM education programs, one that worked with inner city children in New York City and another with rural children in North Dakota. We agree that it may be important to serve both of these populations, but it is not clear that two separate administrative structures are necessary to ensure both populations are served. The Office of Science and Technology Policy said it would address our recommendations in the 5-year Federal STEM Education Strategic Plan, which will be released in spring 2012. Furthermore, the President's Fiscal Year 2013 budget established STEM education programs as one of fourteen cross-agency priority goals. These goals are intended to enhance progress in areas needing more cross-government collaboration.

- *Coordination of space system organizations:* U.S. government space systems—such as the Global Positioning System (GPS) and space-based weather systems—provide a wide range of capabilities to a large number of users, including the federal government, U.S. businesses and citizens, and other countries. Space systems are usually very expensive, often costing billions of dollars to acquire. More than \$25 billion a year is appropriated to agencies for developing space systems. These systems typically take a long time to develop, and often consist of multiple components, including satellites, ground control stations, terminals, and user equipment. Moreover, the nation's satellites are put into orbit by rockets that can cost more than \$100 million per launch. We have found that costs of space programs tend to increase significantly from initial cost estimates. A variety of agencies, such as the Federal Aviation Administration, the National Oceanic and Atmospheric Administration, and DHS rely on government space systems to execute their missions,

but responsibilities for acquiring space systems are diffused across various DOD organizations as well as the intelligence community and the National Aeronautics and Space Administration. Fragmented leadership has led to program challenges and potential duplication in developing multi-billion dollar space systems. In some cases, problems with these systems have been so severe that acquisitions were either canceled or the needed capabilities were severely delayed.

Fragmented leadership and lack of a single authority in overseeing the acquisition of space programs have created challenges for optimally acquiring, developing, and deploying new space systems. This fragmentation is problematic not only because of a lack of coordination that has led to delays in fielding systems, but also because no one person or organization is held accountable for balancing governmentwide needs against wants, resolving conflicts and ensuring coordination among the many organizations involved with space acquisitions, and ensuring that resources are directed where they are most needed. For example, we reported in April 2009 that the coordination of GPS satellites and user equipment segments is not adequately synchronized due to funding shifts and diffuse leadership in the program, likely leading to numerous years of missed opportunities to utilize new capabilities.³⁵ DOD has taken some steps to better coordinate the GPS segments by creating the Space and Intelligence Office within the Office of the Under Secretary of Defense for Acquisition, Technology, and Logistics and conducting enterprise level reviews of the GPS program. However, DOD has not yet established a single authority responsible for ensuring that all GPS segments, including user equipment, are synchronized to the maximum extent practicable.

DOD has also undertaken a number of initiatives to improve leadership over defense space acquisitions, but these actions have not been in place long enough to determine whether acquisition outcomes will improve. Moreover, the initiatives do not extend to the space activities across the government. We and others, including the Commission to Assess United States National Security Space Management and Organization, have previously recommended a number of changes to the leadership of the space community and have consistently reported that a lack of strong, centralized leadership has led to inefficiencies and other problems. But the question as to what office or leadership structure above the

³⁵GAO, *Global Positioning System: Significant Challenges in Sustaining and Upgrading Widely Used Capabilities*, [GAO-09-325](#) (Washington, D.C.: Apr. 30, 2009).

department level would be effective and appropriate for coordinating all U.S. government space programs and setting priorities has not been addressed.

We have suggested that OMB work with the National Security Council to assess whether a governmentwide oversight body for space acquisitions is needed. OMB agreed that coordinating space activities across the U.S. government has been and continues to be a major challenge, but is concerned that our recommendation would add an extra layer of space bureaucracy on top of ongoing coordination efforts as well as additional costs and possible confusion regarding roles and authorities among the existing mechanisms. We believe that the recommendation is sufficiently flexible to allow for an implementation approach that would address these concerns.

- *Defense Language and Culture Training*: DOD has emphasized the importance of developing language skills and knowledge of foreign cultures within its forces to meet the needs of current and future military operations and it has invested millions of dollars to provide language and culture training to thousands of servicemembers, including those deploying to ongoing operations. For example, we estimated that DOD invested about \$266 million for fiscal years 2005 through 2011 to provide general purpose forces with training support, such as classroom instruction, computer-based training, and training aids. We found that DOD has not developed an integrated approach to reduce fragmentation in the military services' language and culture training approaches and overlap in the content of training products acquired by the military services and other organizations.

In May 2011, we reported that language and culture training within DOD is not provided through a single department- or servicewide program, but rather multiple DOD organizations oversee the development and acquisition of language and culture training and related products and deliver training.³⁶ We recommended that the Office of the Under Secretary of Defense for Personnel and Readiness establish internal mechanisms to assist the department in reaching consensus with the military services and other DOD entities on training priorities, synchronize

³⁶GAO, *Military Training: Additional Actions Needed to Improve Planning and Coordination of Army and Marine Corps Language and Culture Training*, [GAO-11-456](#) (Washington, D.C.: May 26, 2011).

the development of service- and departmentwide plans with the budget process, and guide efforts to monitor progress. DOD agreed with our recommendation.

We also found that the military services have not fully coordinated efforts to develop and acquire language and culture training products. As a result, the services have acquired overlapping and potentially duplicative products, such as reference materials containing country- or region-specific cultural information and computer software or web-based training programs that can be used within a distributed learning training environment. To illustrate, we analyzed 18 DOD language and culture training products and found that the content overlapped to some extent with at least one other training product. For Afghan languages, DOD invested in at least five products that were intended to build basic foreign language skills or specific language skills needed to perform military tasks.

We suggested that the Office of the Under Secretary of Defense for Personnel and Readiness and the military services designate organizational responsibility and a supporting process to inventory and evaluate existing language and culture products and plans for additional investments, eliminate any unnecessary overlap and duplication, and adjust resources accordingly, as well as take steps to develop and contract for new products that can be used by more than one military service. DOD agreed that departmentwide coordination efforts could be improved and noted that our analysis would be useful in targeting specific areas for improvement.

- *Federal facility risk assessments:* Federal facilities continue to be vulnerable to terrorist attacks and other acts of violence, as evidenced by the 2010 attacks on the IRS building in Austin, Texas, and the federal courthouse in Las Vegas, Nevada, which resulted in loss of life. DHS's Federal Protective Service (FPS) is the primary federal agency responsible for providing physical security and law enforcement services—including conducting risk assessments—for the approximately 9,000 federal facilities under the control and custody of the General Services Administration. We found that agencies are making duplicate payments for facility risk assessments by completing their own assessments, while also paying DHS for assessments that the department is not performing.

We reported in June 2008 and also have recently found that multiple federal agencies are expending additional resources to assess their own facilities; although, according to an FPS official, the agency received \$236

million from federal agencies for risk assessments and other security services in fiscal year 2011.³⁷ For example, an IRS official stated that IRS completed risk assessments based on concerns about risks unique to its mission for approximately 65 facilities that it also paid FPS to assess. Additionally, Environmental Protection Agency officials said that the agency has conducted its own assessments based on concerns with the quality and thoroughness of FPS's assessments. These assessments are conducted by teams of contractors and agency employees, cost an estimated \$6,000, and can take a few days to a week to complete.

FPS's planned risk assessment tool is intended to provide FPS with the capability to assess risks at federal facilities based on threat, vulnerability, and consequence; and track countermeasures to mitigate those risks, but it is unclear if the tool will help minimize duplication. According to an official, FPS planned to use its Risk Assessment and Management Program to complete assessments of about 700 federal facilities in fiscal year 2010 and 2,500 facilities in fiscal year 2011. However, as we reported in July 2011, FPS experienced cost overruns, schedule delays, and operational issues with developing this program and as a result the agency could not use it to complete risk assessments.³⁸ We found that since November 2009, the agency has only completed four risk assessments using its Risk Assessment and Management Program.

We identified several steps that DHS could take to address duplication in FPS's risk assessments. For example, in July 2011 we recommended that DHS develop interim solutions for completing risk assessments while addressing challenges with the Risk Assessment and Management Program. In addition, in February 2012, we suggested DHS work with federal agencies to determine their reasons for duplicating the activities included in FPS's risk assessments and identify measures to reduce this duplication. DHS agreed with our July 2011 recommendation and has begun taking action to address it, but did not comment on the action we identified in February 2012.

³⁷GAO, *Homeland Security: The Federal Protective Service Faces Several Challenges That Hamper Its Ability to Protect Federal Facilities*, [GAO-08-683](#) (Washington, D.C.: June 11, 2008).

³⁸GAO, *Federal Protective Service: Actions Needed to Resolve Delays and Inadequate Oversight Issues with FPS's Risk Assessment and Management Program*, [GAO-11-705R](#) (Washington, D.C.: July 15, 2011).

Our 2012 annual report also summarized 19 areas—beyond those directly related to duplication, overlap, or fragmentation—describing other opportunities for agencies or Congress to consider taking action that could either reduce the cost of government operations or enhance revenue collection for the Treasury. These cost saving and revenue-enhancing opportunities also span a wide range of federal government agencies and mission areas (see table 2).

Table 2: Cost-Saving or Revenue-Enhancing Opportunities Identified

Mission	Areas identified
Defense	<p>33. Air Force Food Service: The Air Force has opportunities to achieve millions of dollars in cost savings annually by reviewing and renegotiating food service contracts, where appropriate, to better align with the needs of installations.</p> <p>34. Defense Headquarters: The Department of Defense should review and identify further opportunities for consolidating or reducing the size of headquarters organizations.</p> <p>35. Defense Real Property: Ensuring the receipt of fair market value for leasing underused real property and monitoring administrative costs could help the military services' enhanced use lease programs realize intended financial benefits.</p> <p>36. Military Health Care Costs: To help achieve significant projected cost savings and other performance goals, DOD needs to complete, implement, and monitor detailed plans for each of its approved health care initiatives.</p> <p>37. Overseas Defense Posture: The Department of Defense could reduce costs of its Pacific region presence by developing comprehensive cost information and re-examining alternatives to planned initiatives.</p> <p>38. Navy's Information Technology Enterprise Network: Better informed decisions are needed to ensure a more cost-effective acquisition approach for the Navy's Next Generation Enterprise Network.</p>
Economic development	<p>39. Auto Recovery Office: Unless the Secretary of Labor can demonstrate how the Auto Recovery Office has uniquely assisted auto communities, Congress may wish to consider prohibiting the Department of Labor from spending any of its appropriations on the Auto Recovery Office and instead require that the department direct the funds to other federal programs that provide funding directly to affected communities.</p>
Energy	<p>40. Excess Uranium Inventories: Marketing the Department of Energy's excess uranium could provide billions in revenue for the government.</p>
General government	<p>41. General Services Administration Schedules Contracts Fee Rates: Re-evaluating fee rates on the General Services Administration's Multiple Award Schedules contracts could result in significant cost savings governmentwide.</p> <p>42. U.S. Currency: Legislation replacing the \$1 note with a \$1 coin would provide a significant financial benefit to the government over time.</p> <p>43. Federal User Fees: Regularly reviewing federal user fees and charges can help Congress and federal agencies identify opportunities to address inconsistent federal funding approaches and enhance user financing, thereby reducing reliance on general fund appropriations.</p> <p>44. Internal Revenue Service Enforcement Efforts: Enhancing the Internal Revenue Service's enforcement and service capabilities can help reduce the gap between taxes owed and paid by collecting billions in tax revenue and facilitating voluntary compliance.</p>

Mission	Areas identified
Health	<p>45. Medicare Advantage Payment: The Centers for Medicare and Medicaid Services could achieve billions of dollars in additional savings by better adjusting for differences between Medicare Advantage plans and traditional Medicare providers in the reporting of beneficiary diagnoses.</p> <p>46. Medicare and Medicaid Fraud Detection Systems: The Centers for Medicare and Medicaid Services needs to ensure widespread use of technology to help detect and recover billions of dollars of improper payments of claims and better position itself to determine and measure financial and other benefits of its systems.</p>
Homeland security/Law enforcement	<p>47. Border Security: Delaying proposed investments for future acquisitions of border surveillance technology until the Department of Homeland Security better defines and measures benefits and estimates life-cycle costs could help ensure the most effective use of future program funding.</p> <p>48. Passenger Aviation Security Fees: Options for adjusting the passenger aviation security fee could further offset billions of dollars in civil aviation security costs.</p> <p>49. Immigration Inspection Fee: The air passenger immigration inspection user fee should be reviewed and adjusted to fully recover the cost of the air passenger immigration inspection activities conducted by Department of Homeland Security's U.S. Immigration and Customs Enforcement and U.S. Customs and Border Protection rather than using general fund appropriations.</p>
International affairs	<p>50. Iraq Security Funding: When considering new funding requests to train and equip Iraqi security forces, Congress should consider the government of Iraq's financial resources, which afford it the ability to contribute more toward the cost of Iraq's security.</p>
Social services	<p>51. Domestic Disaster Assistance: The Federal Emergency Management Agency could reduce the costs to the federal government related to major disasters declared by the President by updating the principal indicator on which disaster funding decisions are based and better measuring a state's capacity to respond without federal assistance.</p>

Source: GAO-12-342SP.

Examples of opportunities for agencies or Congress to consider taking action that could either reduce the cost of government operations or enhance revenue collections include:

- *Air Force food service:* According to Air Force officials, most Air Force installations have their own individual contracts for food service, with a total cost of approximately \$150 million per year for all Air Force installations. We found that the Air Force has opportunities to reduce its overall food service costs by millions of dollars annually by reviewing food service contracts and adjusting them, when appropriate, to better meet the needs of its installations, including aligning labor needs with the actual number of meals served by the dining facilities.

The Air Force recently undertook an initiative to improve food service at six pilot installations, with intentions to eventually expand this initiative to more Air Force installations. Among other intended outcomes, Air Force officials stated that the first group of pilot installations achieved cost

savings when compared to their previous contracts while also increasing hours of operation in the dining facilities and serving an additional 500,000 meals per year. We compared the estimated amount of food service labor at the six pilot installations under prior contracts to the projected work schedules under the initiative and found that by adjusting staffing levels for contractor staff at dining facilities, the contractor reduced the total number of labor hours at five of the six pilot installations by 53 percent. For example, at one installation, the number of estimated labor hours decreased from approximately 2,042 hours per week to 920. For the sixth installation where the labor hours did not decrease, the Air Force Audit Agency had recently conducted a review that found that the number of food service personnel did not align with workload estimates. As a result, the Air Force renegotiated its workload estimates and pay rates, resulting in savings of approximately \$77,000 annually.

During our review, we discussed the potential opportunity for achieving additional savings by reviewing staffing levels at other installations outside of the initiative with Air Force officials. As a result, the Air Force issued a memorandum directing a review of existing food service contracts to determine if the contracts meet current mission needs. The memorandum indicated that special attention must be given to whether the food service contract workload estimates were properly aligned with the actual number of meals served. In July 2011, we recommended that the Secretary of the Air Force monitor the actions taken in response to the direction to review food service contracts, and take actions, as appropriate, to ensure that cost-savings measures are implemented.³⁹ According to Air Force officials, eight installations have recently reviewed and renegotiated their food service contracts for a total savings of over \$2.5 million per year. The potential exists for other installations that rely on contracts to meet their food service needs to achieve similar financial benefits. For example, the Air Force has requested that each of its installations conduct a 100 percent review of existing food service contracts to determine if their current contract workload estimates meet current mission needs or if the contracts require modification. In addition, the Office of the Secretary of Defense planned to share the results of the Air Force's review of its food service labor costs to achieve cost savings with the other military services.

³⁹GAO, *Defense Management: Actions Needed to Improve Management of Air Force's Food Transformation Initiative*, [GAO-11-676](#) (Washington, D.C.: July 26, 2011).

-
- *Navy information technology network:* In 2007, the Navy established the Next Generation Enterprise Network program (NGEN) to replace and improve the Navy Marine Corps Intranet. According to the President's fiscal year 2012 budget request, the NGEN program has spent about \$434 million on work associated with the transition from the Navy Marine Corps Intranet. The Navy estimated that NGEN would cost approximately \$50 billion to develop, operate, and maintain through fiscal year 2025. We found that better informed decisions were needed to ensure a more cost-effective acquisition approach for the Navy's NGEN program.

We reported in March 2011 that the Navy selected an approach that was not considered as part of its analysis of alternatives and that it estimated would cost at least \$4.7 billion more than any of the four assessed alternatives.⁴⁰ In addition, we reported that the Navy's schedule for NGEN also did not provide a reliable basis for program execution because it did not adequately satisfy key schedule estimating best practices, such as establishing the critical path (the sequence of activities that, if delayed, impacts the planned completion date of the project) and assigning resources to all work activities. We also found that the Navy's acquisition decisions were not always performance- or risk-based. In particular, senior executives approved the NGEN program's continuing progress in the face of known performance shortfalls and risks.

To address these weaknesses, we recommended in March 2011 that the Navy limit further investment in NGEN until it conducts an immediate interim review to reconsider the selected acquisition approach. We also identified an additional action that the Navy could take to facilitate implementation of the approach resulting from this review by ensuring that the NGEN schedule reflects key schedule estimating practices and future program reviews and decisions fully reflect the program's performance and exposure to risk. DOD agreed with our recommendation to ensure that future NGEN acquisition reviews and decisions fully reflect the state of the program's performance and its exposure to risks. The department did not agree with our recommendation to reconsider its acquisition approach; however, the Navy is currently in the process of reviewing and making changes to the NGEN acquisition strategy. We are undertaking work that will assess the extent to which the Navy has

⁴⁰GAO, *Information Technology: Better Informed Decision Making Needed on Navy's Next Generation Enterprise Network Acquisition*, [GAO-11-150](#) (Washington, D.C.: Mar. 11, 2011).

conducted its interim review to reconsider its acquisition approach and evaluate the revised strategy.

- *DOD health care costs*: DOD spends billions of dollars annually on its worldwide healthcare system. Currently, health care costs constitute nearly 10 percent of DOD's baseline budget request. For its fiscal year 2012 budget, according to DOD documentation, DOD received \$52.7 billion⁴¹ to provide health care to approximately 9.6 million active duty servicemembers, reservists, retirees, and their dependents. DOD recognizes that it must address the rate at which health care costs are rising and has stated that it intends to continue to develop health care initiatives that will improve the quality and standard of care, while reducing growth in overall costs.⁴² Our ongoing work has found that DOD has identified 11 initiatives intended to slow the rise in its health care costs, but it has not fully applied results-oriented management practices to its efforts or an overall monitoring process, which limits its effectiveness in implementing these initiatives and achieving related cost savings goals.

DOD's initiatives consist primarily of changes to clinical and business practices in areas ranging from primary care to psychological health to purchased care reimbursement practices. Partly in response to our ongoing work assessing DOD's management of its initiatives, the department has taken some initial steps toward managing their implementation by developing a number of high-level, non-monetary metrics and corresponding goals for each strategic initiative, and other management tools, such as implementation plans that will include key elements such as investment costs and savings estimates. However, DOD currently has completed only one implementation plan, which contains the one available cost savings estimate among all the initiatives. Without completing its plans and incorporating elements such as problem definitions, resources needed, goals, performance measures, and cost estimates into them, DOD will not be fully aware if these initiatives are achieving projected cost savings and other performance goals.

⁴¹DOD's fiscal year 2012 budget of \$52.7 billion for its Unified Medical Budget includes \$32.5 billion for the Defense Health Program, \$8.3 billion for military personnel, \$1.1 billion for military construction, and \$10.8 billion for the Medicare Eligible Retiree Health Care Fund. The total excludes overseas contingency operations funds and other transfers.

⁴²DOD, *Quadrennial Defense Review Report*, February 2010.

In addition, DOD has not completed the implementation of an overall monitoring process across its portfolio of initiatives for overseeing the initiatives' progress or identified accountable officials and their roles and responsibilities for all of its initiatives. DOD's 2007 *Task Force on the Future of Military Health Care* noted that the current Military Health System does not function as a fully integrated health care system.⁴³ For example, while the Assistant Secretary of Defense for Health Affairs controls the Defense Health Program budget, the services directly supervise their medical personnel and manage their military treatment facilities. Therefore, as Military Health System leaders develop and implement their plans to control rising health care costs, they will need to work across multiple authorities and areas of responsibility. Until DOD fully implements a military-wide mechanism to monitor progress and identify accountable officials, including their roles and responsibilities across its portfolio of initiatives, DOD may be hindered in its ability to achieve a more cost-efficient military health system.

In order to enhance its efforts to manage rising health care costs and demonstrate sustained leadership commitment for achieving the performance goals of the Military Health System's strategic initiatives, we plan to recommend as part of our ongoing work that DOD complete and fully implement detailed implementation plans for each of the approved health care initiatives in a manner consistent with results-oriented management practices, such as the inclusion of upfront investment costs and cost savings estimates; and complete the implementation of an overall monitoring process across its portfolio of initiatives for overseeing the initiatives' progress and identifying accountable officials and their roles and responsibilities for all of its initiatives. We believe that DOD may realize projected cost savings and other performance goals by taking these actions to help ensure the successful implementation of its cost savings initiatives. Given that DOD identified these initiatives as steps to slow the rapidly growing costs of its medical program, if implemented these initiatives could potentially save DOD millions of dollars. DOD generally agreed with our planned recommendations.

- *Excess uranium inventories*: DOE maintains large inventories of depleted and natural uranium that it no longer requires for nuclear weapons or fuel for naval nuclear propulsion reactors. We reported in March and April

⁴³Defense Health Board, *Task Force on the Future of Military Health Care* (December 2007).

2008 and again in June 2011 that under certain conditions, the federal government could generate billions of dollars by marketing inventories of excess uranium to commercial power plants to use in their reactors.⁴⁴

Specifically, we identified options that DOE could take to market the excess uranium inventories for commercial use. For example, DOE could contract to re-enrich inventories of depleted uranium hexafluoride (a by-product of the uranium enrichment process), consisting of hundreds of thousands of metric tons of material that are stored at DOE's uranium enrichment plants. Although DOE would have to pay for processing, the resulting re-enriched uranium could be potentially sold if the sales price of the uranium exceeded processing costs. DOE could also pursue an option of selling the depleted uranium inventory "as-is". This approach would require DOE to obtain the appropriate statutory authority to sell depleted uranium in its current unprocessed form. Firms such as nuclear power utilities and enrichment companies might find it cost effective to purchase the uranium and re-enrich it as a source of nuclear fuel.

If executed in accordance with federal law, DOE sales of natural uranium could generate additional revenue for the government. Natural uranium on its own cannot fuel nuclear reactors and weapons. Rather, it is shipped to a conversion facility, where it is converted for the enrichment process. We reported in September 2011 that in 7 transactions executed since 2009 DOE has, in effect, sold nearly 1,900 metric tons of natural uranium into the market, using a contractor as a sales agent, to fund environmental cleanup services.⁴⁵ DOE characterized these sales as barter transactions—exchanges of services (environmental cleanup work) for materials (uranium). While DOE received no cash directly from the transactions, it allowed its contractor to keep cash from the sales, which DOE would otherwise have owed to the United States Treasury. Because federal law requires an official or agent of the government receiving money for the

⁴⁴See GAO, *Nuclear Material: DOE Has Several Potential Options for Dealing with Depleted Uranium Tails, Each of Which Could Benefit the Government*, [GAO-08-606R](#) (Washington, D.C.: Mar. 31, 2008); *Nuclear Material: Several Potential Options for Dealing with DOE's Depleted Uranium Tails Could Benefit the Government*, [GAO-08-613T](#) (Washington, D.C.: Apr. 3, 2008); and *Nuclear Material: DOE's Depleted Uranium Tails Could Be a Source of Revenue for the Government*, [GAO-11-752T](#) (Washington, D.C.: June 13, 2011).

⁴⁵GAO, *Excess Uranium Inventories: Clarifying DOE's Disposition Options Could Help Avoid Further Legal Violations*, [GAO-11-846](#) (Washington, D.C.: Sept. 26, 2011).

government from any source to deposit the money in the Treasury, we found that these transactions violated the miscellaneous receipts statute.

We have reported that congressional action may be needed to overcome legal obstacles to the pursuit of certain options for the sale of depleted and natural uranium. Specifically, our March 2008 report suggested that Congress may wish to explicitly provide direction about whether and how DOE may sell or transfer depleted uranium in its current form. Our September 2011 report suggested that if Congress sees merit in using the proceeds from the barter, transfer, or sale of federal uranium assets to pay for environmental cleanup work, it could consider providing DOE with explicit authority to barter excess uranium and to retain the proceeds from these transactions. We also suggested that Congress could direct DOE to sell uranium for cash and make those proceeds available by appropriation for environmental cleanup work.

Congress has taken some actions in response to our work. For example, the Consolidated Appropriations Act, 2012, among other things, requires the Secretary of Energy to provide congressional appropriations committees with information on the transfer, sale, barter, distribution, or other provision of uranium in any form and an estimate of the uranium value along with the expected recipient of the material. The Consolidated Appropriations Act, 2012 also requires the Secretary to submit a report evaluating the economic feasibility of re-enriching depleted uranium.

- *Medicare and Medicaid fraud detection systems:* We have designated Medicare and Medicaid as high-risk programs, in part due to their susceptibility to improper payments—estimated to be about \$65 billion in fiscal year 2011. To integrate data about all types of Medicare and Medicaid claims and improve its ability to detect fraud, waste, and abuse in these programs, the Centers for Medicare and Medicaid Services (CMS) initiated two information technology programs—the Integrated Data Repository, which is intended to provide a centralized repository of claims data for all Medicare and Medicaid programs, and One Program Integrity, a set of tools that enables CMS contractors and staff to access and analyze data retrieved from the repository. According to CMS officials, the systems are expected to provide financial benefits of more than \$21 billion by the end of fiscal year 2015. We found that CMS needs to ensure widespread use of technology to help detect and recover billions of dollars of improper payments of claims and better position itself to determine and measure financial and other benefits of its systems.

We reported in June 2011 that CMS had developed and begun using both systems, but was not yet positioned to identify, measure, or track benefits realized from these programs.⁴⁶ For example, although in use since 2006, the Integrated Data Repository did not have Medicaid claims data or information from other CMS systems that store and process data related to the entry, correction, and adjustment of claims due to funding and other technical issues. These data are needed to help analysts prevent improper payments. Program officials told us that they had begun incorporating these data in September 2011 and planned to make them available to program integrity analysts in spring 2012. Regarding Medicaid data, agency officials stated that they did not account for difficulties associated with integrating data from the various types and formats of data stored in disparate state systems or develop reliable schedules for its efforts to incorporate these data. In particular, program officials did not consider certain risks and obstacles, such as technical challenges, as they developed schedules for implementing the Integrated Data Repository. Lacking reliable schedules, CMS may face additional delays in making available all the data that are needed to support enhanced program integrity efforts.

In addition, CMS had not trained its broad community of analysts to use the One Program Integrity system because of delays introduced by a redesign of initial training plans that were found to be insufficient. Specifically, program officials planned for 639 analysts to be using the system by the end of fiscal year 2010; however only 41—less than 7 percent—were actively using it as of October 2010. Because of these delays, the initial use of the system was limited to a small number of CMS staff and contractors. In updating the status of the training efforts in November 2011, although we did not validate these data, CMS officials reported that a total of 215 program integrity analysts had been trained and were using the system. However, program officials had not finalized plans and schedules for training all intended users.

In June 2011, we recommended that CMS take a number of actions to help ensure the program's success toward achieving the billions of dollars in financial benefits that program integrity officials projected, such as finalizing plans and reliable schedules for incorporating additional data

⁴⁶GAO, *Fraud Detection Systems: Centers for Medicare and Medicaid Services Needs to Ensure More Widespread Use*, [GAO-11-475](#) (Washington, D.C.: June 30, 2011).

into the Integrated Data Repository and conducting training for all analysts who are intended to use the One Program Integrity system. CMS agreed with our recommendations and identified steps the agency is taking to implement them. We plan to conduct additional work to determine whether CMS has addressed our recommendations and identified financial benefits and progress toward meeting agency goals resulting from the implementation of its fraud detection systems.

- *Medicare Advantage*: In fiscal year 2010, the federal government spent about \$113 billion on the Medicare Advantage program, a private plan alternative to the original Medicare program that covers about a quarter of Medicare beneficiaries. CMS, the agency that administers Medicare, adjusts payments to Medicare Advantage plans based on the health status of each plan's enrollees. The agency could achieve billions of dollars in additional savings by better adjusting for differences between Medicare Advantage plans and traditional Medicare providers in the reporting of beneficiary diagnoses.

CMS calculates a risk score for every beneficiary—a relative measure of health status—which is based on a beneficiary's demographic characteristics, such as age and gender, and major medical conditions. To obtain information on the medical conditions of beneficiaries in traditional Medicare, CMS generally analyzes diagnoses—numerically coded by providers into Medicare defined categories—on the claims that providers submit for payment. For beneficiaries enrolled in Medicare Advantage plans, which do not submit claims, CMS requires plans to submit diagnostic codes for each beneficiary. Analysis has shown that risk scores are higher for Medicare Advantage beneficiaries than for beneficiaries in traditional Medicare with the same characteristics.

Medicare Advantage plans have a financial incentive to ensure that all relevant diagnoses are coded, as this can increase beneficiaries' risk scores and, ultimately, payments to the plans. Many traditional Medicare providers are paid for services rendered, and providers have less incentive to code all relevant diagnoses. Policymakers have expressed concern that risk scores for Medicare Advantage beneficiaries have grown at a faster rate than those for traditional Medicare, in part because of differences in coding diagnoses. In 2005, Congress directed CMS to analyze and adjust risk scores for differences in coding practices, and in 2010, CMS estimated that 3.41 percent of Medicare Advantage risk scores were due to differences in diagnostic coding practices. It reduced the scores by an equal percentage, thereby saving \$2.7 billion.

We identified shortcomings in CMS's method for adjusting Medicare Advantage payments to reflect differences in diagnostic coding practices between Medicare Advantage and traditional Medicare. CMS did not use the most recent risk score data for its estimates; account for the increasing annual impact of coding differences over time; or account for beneficiary characteristics beyond differences in age and mortality between the Medicare Advantage and traditional Medicare populations, such as sex, Medicaid enrollment status, and beneficiary residential location. We estimated that a revised methodology that addressed these shortcomings could have saved Medicare between \$1.2 billion and \$3.1 billion in 2010 in addition to the \$2.7 billion in savings that CMS's 3.41 percent adjustment produced. We expect that savings in future years will be greater. In January 2012, we recommended that CMS take action to help ensure appropriate payments to Medicare Advantage plans and improve the accuracy of the adjustment made for differences in coding practices over time.⁴⁷ The Department of Health and Human Services characterized our results as similar to those obtained by CMS.

- *User fees:* User fees assign part or all of the costs of federal programs and activities—the cost of providing a benefit that is above and beyond what is normally available to the general public—to readily identifiable users of those programs and activities. Regularly reviewing federal user fees and charges can help Congress and federal agencies identify opportunities to address inconsistent federal funding approaches and enhance user financing, thereby reducing reliance on general fund appropriations.

The Chief Financial Officers Act of 1990 (CFO Act) requires agencies to biennially review their fees and to recommend fee adjustments, as appropriate; additionally, OMB Circulars No. A-11 and No. A-25 direct agencies to discuss the results of these reviews and any resulting proposals, such as adjustments to fee rates, in the CFO annual report required by the CFO Act.⁴⁸ In 2011, we surveyed the 24 agencies covered by the CFO Act on their review of user fees. Twenty-one of the 23 agencies that responded reported charging more than 3,600 fees and

⁴⁷GAO, *Medicare Advantage: CMS Should Improve the Accuracy of Risk Score Adjustments for Diagnostic Coding Practices*, [GAO-12-51](#) (Washington, D.C.: Jan. 12, 2012).

⁴⁸Pub. L. No. 101-576 (1990).

collecting nearly \$64 billion in fiscal year 2010, but agency responses indicated varying levels of adherence to the biennial review and reporting requirements. The survey responses indicated that for most fees, agencies (1) had not discussed fee review results in annual reports, and (2) had not reviewed the fees and were inconsistent in their ability to provide fee review documentation.

We found specific examples where a comprehensive review of user fees could lead to cost savings or enhanced revenues for the government. For example, reviewing and adjusting as needed the air passenger immigration inspection user fee to fully recover the cost of the air passenger immigration inspection activities could reduce general fund appropriations for those activities. International air passengers arriving in the United States are subject to an immigration inspection to ensure that they have legal entry and immigration documents. International air passengers pay the immigration inspection fee when they purchase their airline tickets, but the rate has not been adjusted since fiscal year 2002. In recent years, U.S. Immigration and Customs Enforcement and U.S. Customs and Border Protection, the agencies responsible for conducting inspection activities, have relied on general fund appropriations to help fund activities for which these agencies have statutory authority to fund with user fees. In fiscal year 2010, this amounted to over \$120 million for the U.S. Customs and Border Protection alone. In September 2007, we recommended that the Secretary of Homeland Security report immigration inspection activity costs to ensure fees are divided between U.S. Immigration and Customs Enforcement and U.S. Customs and Border Protection according to their respective immigration inspection activity costs and to develop a legislative proposal to adjust the air passenger immigration inspection fee if it was found to not recover the costs of inspection activities. DHS agreed with our recommendations, but some of the recommendations remain unimplemented.⁴⁹ In February 2012, we suggested that Congress may wish to require the Secretary of Homeland Security to fully implement these recommendations which would serve to help to better align air passenger immigration inspection fee revenue with the costs of providing these services and achieve cost savings by reducing the reliance on general fund appropriations.

⁴⁹GAO, *Federal User Fees: Key Aspects of International Air Passenger Inspection Fees Should Be Addressed Regardless of Whether Fees Are Consolidated*, [GAO-07-1131](#) (Washington, D.C.: Sept. 24, 2007).

Similarly, we identified options for adjusting the passenger aviation security fee, a uniform fee on passengers of U.S. and foreign air carriers originating at airports in the United States. Passenger aviation security fees collected offset amounts appropriated to the Transportation Security Administration for aviation security. In recent years, several options have been considered for increasing the passenger aviation security fee. However, the fee has not been increased since it was imposed in February 2002. We suggested that Congress may wish to consider increasing the passenger security fee. Such an increase could further offset the need for appropriated funds to support civil aviation security costs from about \$2 billion to \$10 billion over 5 years.

- *Tax gap:* The financing of the federal government depends largely on the IRS's ability to collect federal taxes every year, which totaled \$2.34 trillion in 2010. For the most part, taxpayers voluntarily report and pay their taxes on time. However the size and persistence of the tax gap—estimated in 2012 for the 2006 tax year to be a \$385 billion difference between the taxes owed and taxes IRS ultimately collected for that year—highlight the need to make progress in improving compliance by those taxpayers who do not voluntarily pay what they owe. Given that tax noncompliance ranges from simple math errors to willful tax evasion, no single approach is likely to fully and cost-effectively address the tax gap. A multifaceted approach to improving compliance that includes enhancing IRS's enforcement and service capabilities can help reduce the tax gap.

One approach we have identified is the expansion of third-party information reporting, which improves taxpayer compliance and enhances IRS's enforcement capabilities. The tax gap is due predominantly to taxpayer underreporting and underpayment of taxes owed. At the same time, taxpayers are much more likely to report their income accurately when the income is also reported to IRS by a third party. By matching information received from third-party payers with what payees report on their tax returns, IRS can detect income underreporting, including the failure to file a tax return. Expanding information reporting to cover payments for services by all owners of rental real estate and to cover payments to corporations for services would improve payee compliance. The Joint Committee on Taxation estimated revenue increases of \$5.9 billion over a 10-year period for just these two expansions.

Status of Actions Taken to Address the Areas Identified in 2011 Annual Report

In our 2011 annual report, we suggested a wide range of actions for Congress and the executive branch to consider such as developing strategies to better coordinate fragmented efforts, implementing executive initiatives to improve oversight and evaluation of overlapping programs, considering enactment of legislation to facilitate revenue collection and examining opportunities to eliminate potential duplication through streamlining, collocating, or consolidating efforts or administrative services. For our 2011 follow-up report, we assessed the extent to which Congress and the executive branch addressed the 81 areas—including a total of 176 actions—to reduce or eliminate unnecessary duplication, overlap, or fragmentation or achieve other potential financial benefits.

Our assessment of progress made as of February 10, 2012, found that 4 (or 5 percent) of the 81 areas GAO identified were addressed; 60 (or 74 percent) were partially addressed; and 17 (or 21 percent) were not addressed. Appendix I presents GAO's assessment of the overall progress made in each area. In updating the actions we identified in the 2011 annual report, we asked the agencies involved and the Office of Management and Budget (OMB) for their review and incorporated comments as appropriate. We applied the following criteria in making these overall assessments for the 81 areas. We determined that an area was:

- “addressed” if all actions needed in that area were addressed;
- “partially addressed” if at least one action needed in that area showed some progress toward implementation, but not all actions were addressed; and
- “not addressed” if none of the actions in that area were addressed.

As of February 10, 2012, the majority of 176 actions needed within the 81 areas identified by GAO have been partially addressed. Specifically, 23 (or 13 percent) were addressed;⁵⁰ 99 (or 56 percent) were partially addressed; 54 (or 31 percent) were not addressed. We applied the following criteria in making these assessments.

⁵⁰In one instance, the legislative action needed required Congress to consider several options, including allowing a tax credit to expire. Thus, because Congress did not renew the provision, the action was considered addressed.

For legislative branch actions:

- “addressed,” means relevant legislation is enacted and addresses all aspects of the action needed;⁵¹
- “partially addressed,” means a relevant bill has passed a committee, the House or Senate, or relevant legislation has been enacted, but only addressed part of the action needed; and
- “not addressed,” means a bill may have been introduced, but did not pass out of a committee, or no relevant legislation has been introduced.

For executive branch actions:

- “addressed,” means implementation of the action needed has been completed;
- “partially addressed,” means the action needed is in development; started but not yet completed; and
- “not addressed,” means the administration and/or agencies have made minimal or no progress toward implementing the action needed.

In addition to the actions reported above, Congress has held a number of hearings and OMB has provided guidance to executive branch agencies on areas that we identified that could benefit from increased attention and ongoing oversight. Since the issuance of our March 2011 report, we have testified numerous times on our first annual report and on specific issues highlighted in the report. Further, OMB has instructed agencies to consider areas of duplication or overlap identified in our 2011 report and by others in their fiscal year 2013 budget submissions and management plans. The OMB guidance also advised agencies to take a number of other steps to enhance efficiency, such as identifying and including in their budget submissions cost-saving efforts that will improve operational efficiency and taxpayers’ rate of return, including program integration,

⁵¹In situations where the action we identified as needed suggested that Congress should let a provision expire, we classified it as “addressed” if Congress permitted such expiration to happen.

reorganizations within and between agency components, and resource realignment to improve public services.

In conclusion Mr. Chairman, Ranking Member Collins, and Members of the Committee, options exist for Congress and agencies to reexamine the federal government's structure and operations in order to improve its efficiency and effectiveness. A number of the issues are difficult to address and implementing many of the actions identified will take time and sustained leadership. This concludes my prepared statement. I would be pleased to answer any questions you may have. Thank you.

The information in this statement is based upon work conducted for completed GAO products and certain ongoing audits, which were conducted in accordance with generally accepted government auditing standards or with our Quality Assurance Framework as appropriate. For further information on this testimony, please contact Janet St. Laurent, Managing Director, Defense Capabilities and Management, who may be reached at (202) 512-4300, or StLaurentJ@gao.gov; and Zina Merritt, Director, Defense Capabilities and Management, who may be reached at (202) 512-4300, or MerrittZ@gao.gov. Specific questions about individual issues may be directed to the area contact listed at the end of each area summary in the reports. Contact points for our Congressional Relations and Public Affairs offices may be found on the last page of this statement.

Appendix I: Overall Progress Made in Each of the 81 Areas Identified in GAO's 2011 Annual Report

This appendix presents a summary of GAO's assessment of the overall progress made in each of the 81 areas that we identified in our March 2011 report¹ in which Congress and the executive branch could take actions to reduce or eliminate potential duplication, overlap, and fragmentation or achieve other potential financial benefits. For each of the 34 areas related to duplication, overlap, or fragmentation that GAO identified, table 3 presents GAO's assessment of the overall progress made in implementing the actions needed in that area. For each of the 47 areas where GAO identified cost saving or revenue enhancement opportunities, table 4 presents GAO's assessment of the overall progress made in implementing the actions GAO identified.

Table 3: Overall Progress Made in Each of the GAO Identified Areas of Potential Duplication, Overlap, and Fragmentation, as of February 10, 2012

Mission	Areas identified	Assessment
Agriculture	1. Fragmented food safety system has caused inconsistent oversight, ineffective coordination, and inefficient use of resources	●
Defense	2. Realigning DOD's military medical command structures and consolidating common functions could increase efficiency and result in projected savings ranging from \$281 million to \$460 million annually	●
	3. Opportunities exist for consolidation and increased efficiencies to maximize response to warfighter urgent needs	●
	4. Opportunities exist to avoid unnecessary redundancies and improve the coordination of counter-improvised explosive device efforts	●
	5. Opportunities exist to avoid unnecessary redundancies and maximize the efficient use of intelligence, surveillance, and reconnaissance capabilities	●
	6. A departmentwide acquisition strategy could reduce DOD's risk of costly duplication in purchasing Tactical Wheeled Vehicles	●
	7. Improved joint oversight of DOD's prepositioning programs for equipment and supplies may reduce unnecessary duplication	●
	8. DOD's business systems modernization: opportunities exist for optimizing business operations and systems	●
Economic development	9. The efficiency and effectiveness of fragmented economic development programs are unclear	●
	10. The federal approach to surface transportation is fragmented, lacks clear goals, and is not accountable for results	●

¹GAO, *Opportunities to Reduce Potential Duplication in Government Programs, Save Tax Dollars, and Enhance Revenue*, [GAO-11-318SP](#) (Washington, D.C.: Mar. 1, 2011).

**Appendix I: Overall Progress Made in
Each of the 81 Areas Identified in GAO's 2011
Annual Report**

Mission	Areas identified	Assessment
	11. Fragmented federal efforts to meet water needs in the U.S.-Mexico border region have resulted in an administrative burden, redundant activities, and an overall inefficient use of resources	○
Energy	12. Resolving conflicting requirements could more effectively achieve federal fleet energy goals	○
	13. Addressing duplicative federal efforts directed at increasing domestic ethanol production could reduce revenue losses by more than \$5.7 billion annually	●
General government	14. Enterprise architectures: key mechanisms for identifying potential overlap and duplication	◐
	15. Consolidating federal data centers provides opportunity to improve government efficiency	◐
	16. Collecting improved data on interagency contracting to minimize duplication could help the government leverage its vast buying power	◐
	17. Periodic reviews could help identify ineffective tax expenditures and redundancies in related tax and spending programs, potentially reducing revenue losses by billions of dollars	○
Health	18. Opportunities exist for DOD and VA to jointly modernize their electronic health record systems	◐
	19. VA and DOD need to control drug costs and increase joint contracting wherever it is cost-effective	◐
	20. The Department of Health and Human Services needs an overall strategy to better integrate nationwide public health information systems	○
Homeland security/ Law enforcement	21. Strategic oversight mechanisms could help integrate fragmented interagency efforts to defend against biological threats	◐
	22. DHS oversight could help eliminate potential duplicating efforts of interagency forums in securing the northern border	○
	23. The Department of Justice plans actions to reduce overlap in explosives investigations , but monitoring is needed to ensure successful implementation	●
	24. The Transportation Security Administration's (TSA) security assessments on commercial trucking companies overlap with those of another agency, but efforts are under way to address the overlap	◐
	25. DHS could streamline mechanisms for sharing security-related information with public transit agencies to help address overlapping information	◐
	26. FEMA needs to improve its oversight of grants and establish a framework for assessing capabilities to identify gaps and prioritize investments	◐
International affairs	27. Lack of information sharing could create the potential for duplication of efforts between U.S. agencies involved in development efforts in Afghanistan	◐
	28. Despite restructuring, overlapping roles and functions still exist at the Department of State's Arms Control and Nonproliferation Bureaus	●
Social services	29. Actions needed to reduce administrative overlap among domestic food assistance programs	○
	30. Better coordination of federal homelessness programs may minimize fragmentation and overlap	◐

**Appendix I: Overall Progress Made in
Each of the 81 Areas Identified in GAO's 2011
Annual Report**

Mission	Areas identified	Assessment
	31. Further steps needed to improve cost-effectiveness and enhance services for transportation-disadvantaged persons	●
Training, employment, and education	32. Multiple employment and training programs: providing information on collocating services and consolidating administrative structures could promote efficiencies	●
	33. Teacher quality : proliferation of programs complicates federal efforts to invest dollars effectively	●
	34. Fragmentation of financial literacy efforts makes coordination essential	●

Legend:

- = Addressed, meaning all actions needed in that area were addressed.
- = Partially addressed, meaning at least one action needed in that area showed some progress toward implementation, but not all actions were addressed.
- = Not addressed, meaning none of the actions needed in that area were addressed.

Source: GAO analysis.

As noted above, table 4 presents GAO's assessment of the overall progress made in addressing the 47 cost-saving and revenue-enhancing areas.

Table 4: Overall Progress Made to Address GAO-Identified Cost-Saving and Revenue-Enhancing Areas, as of February 10, 2012

Mission	Areas identified	Assessment
Agriculture	35. Reducing some farm program payments could result in savings from \$800 million over 10 years to up to \$5 billion annually	○
Defense	36. DOD should assess costs and benefits of overseas military presence options before committing to costly personnel realignments and construction plans, thereby possibly saving billions of dollars	●
	37. Total compensation approach is needed to manage significant growth in military personnel costs	●
	38. Employing best management practices could help DOD save money on its weapon systems acquisition programs	●
	39. More efficient management could limit future costs of DOD's spare parts inventory	●
	40. More comprehensive and complete cost data can help DOD improve the cost-effectiveness of sustaining weapon systems	●
	41. Improved corrosion prevention and control practices could help DOD avoid billions in unnecessary costs over time	●
Economic development	42. Revising the essential air service program could improve efficiency	●
	43. Improved design and management of the universal service fund as it expands to support broadband could help avoid cost increases for consumers	●
	44. The Corps of Engineers should provide Congress with project-level information on unobligated balances	●

**Appendix I: Overall Progress Made in
Each of the 81 Areas Identified in GAO's 2011
Annual Report**

Mission	Areas identified	Assessment
Energy	45. Improved management of federal oil and gas resources could result in approximately \$1.8 billion over 10 years ^a	●
General government	46. Efforts to address governmentwide improper payments could result in significant cost savings	●
	47. Promoting competition for the over \$500 billion in federal contracts could potentially save billions of dollars over time	●
	48. Applying strategic sourcing best practices throughout the federal procurement system could save billions of dollars annually	●
	49. Adherence to new guidance on award fee contracts could improve agencies' use of award fees to produce savings	●
	50. Agencies could realize cost savings of at least \$3 billion by continued disposal of unneeded federal real property	●
	51. Improved cost analyses used for making federal facility ownership and leasing decisions could save tens of millions of dollars	●
	52. OMB's IT Dashboard reportedly has already resulted in \$3 billion in savings and can further help identify opportunities to invest more efficiently in information technology	●
	53. Increasing electronic filing of individual income tax returns could reduce IRS's processing costs and increase revenues by hundreds of millions of dollars	●
	54. Using return on investment information to better target IRS enforcement could reduce the tax gap; for example, a 1 percent reduction would increase tax revenues by \$3.8 billion ^b	●
	55. Better management of tax debt collection may resolve cases faster with lower IRS costs and increase debt collected	●
	56. Broadening IRS's authority to correct simple tax return errors could facilitate correct tax payments and help IRS avoid costly, burdensome audits	○
	57. Enhancing mortgage interest information reporting could improve tax compliance	○
	58. More information on the types and uses of canceled debt could help IRS limit revenue losses of forgiven mortgage debt	●
	59. Better information and outreach could help increase revenues by tens or hundreds of millions of dollars annually by addressing overstated real estate tax deductions	●
	60. Revisions to content and use of Form 1098-T could help IRS enforce higher education requirements and increase revenues	●
61. Many options could improve the tax compliance of sole proprietors and begin to reduce their \$68 billion portion of the tax gap	○	
62. IRS could find additional businesses not filing tax returns by using third-party data, which show such businesses have billions of dollars in sales	●	
63. Congress and IRS can help S corporations and their shareholders be more tax compliant, potentially increasing tax revenues by hundreds of millions of dollars each year	●	
64. IRS needs an agencywide approach for addressing tax evasion among the at least 1 million networks of businesses and related entities	●	
65. Opportunities exist to improve the targeting of the \$6 billion research tax credit and reduce forgone revenue	○	

**Appendix I: Overall Progress Made in
Each of the 81 Areas Identified in GAO's 2011
Annual Report**

Mission	Areas identified	Assessment
	66. Converting the new markets tax credit to a grant program may increase program efficiency and significantly reduce the \$3.8 billion 5-year revenue cost of the program	○
	67. Limiting the tax-exempt status of certain governmental bonds could yield revenue	○
	68. Adjusting civil tax penalties for inflation potentially could increase revenues by tens of millions of dollars per year, not counting any revenues that may result from maintaining the penalties' deterrent effect	◐
	69. IRS may be able to systematically identify nonresident aliens reporting unallowed tax deductions or credits	●
	70. Tracking undisbursed balances in expired grant accounts could facilitate the reallocation of scarce resources or the return of funding to the Treasury	○
Health	71. Preventing billions in Medicaid improper payments requires sustained attention and action by CMS	◐
	72. Federal oversight over Medicaid supplemental payments needs improvement, which could lead to substantial cost savings	○
	73. Better targeting of Medicare's claims review could reduce improper payments	◐
	74. Potential savings in Medicare's payment for health care	◐
Homeland security/ Law enforcement	75. DHS's management of acquisitions could be strengthened to reduce cost overruns and schedule and performance shortfalls	◐
	76. Improvements in managing research and development could help reduce inefficiencies and costs for homeland security	◐
	77. Validation of TSA's behavior-based screening program is needed to justify funding or expansion	◐
	78. More efficient baggage screening systems could result in about \$470 million in reduced TSA personnel costs over the next 5 years	◐
	79. Clarifying availability of certain customs fee collections could produce a one-time savings of \$640 million	◐
Income security	80. Social Security needs data on pensions from noncovered earnings to better enforce offsets and ensure benefit fairness, estimated to result in \$2.4-\$2.9 billion savings over 10 years	○
International affairs	81. Congress could pursue several options to improve collection of antidumping and countervailing duties	○

Legend:

● = Addressed, meaning all actions needed in that area were addressed.

◐ = Partially addressed, meaning at least one action needed in that area showed some progress toward implementation, but not all actions were addressed.

○ = Not addressed, meaning none of the actions needed in that area were addressed.

Source: GAO analysis.

^aThe Department of the Interior, Bureau of Land Management, updated the anticipated revenues from \$1.75 billion to \$1.8 billion in its fiscal year 2012 budget justification.

^bThe net tax gap was updated in 2012 and estimated to be \$385 billion for the 2006 tax year. Thus, a 1 percent reduction would increase tax revenues by \$3.8 billion.

GAO's Mission

The Government Accountability Office, the audit, evaluation, and investigative arm of Congress, exists to support Congress in meeting its constitutional responsibilities and to help improve the performance and accountability of the federal government for the American people. GAO examines the use of public funds; evaluates federal programs and policies; and provides analyses, recommendations, and other assistance to help Congress make informed oversight, policy, and funding decisions. GAO's commitment to good government is reflected in its core values of accountability, integrity, and reliability.

Obtaining Copies of GAO Reports and Testimony

The fastest and easiest way to obtain copies of GAO documents at no cost is through GAO's website (www.gao.gov). Each weekday afternoon, GAO posts on its website newly released reports, testimony, and correspondence. To have GAO e-mail you a list of newly posted products, go to www.gao.gov and select "E-mail Updates."

Order by Phone

The price of each GAO publication reflects GAO's actual cost of production and distribution and depends on the number of pages in the publication and whether the publication is printed in color or black and white. Pricing and ordering information is posted on GAO's website, <http://www.gao.gov/ordering.htm>.

Place orders by calling (202) 512-6000, toll free (866) 801-7077, or TDD (202) 512-2537.

Orders may be paid for using American Express, Discover Card, MasterCard, Visa, check, or money order. Call for additional information.
