Formed in January 2004, the Financial Services Institute's (FSI) mission is to create a healthier regulatory environment for independent broker-dealers and their affiliated independent financial advisors through aggressive and effective advocacy, education and public awareness. FSI is a tax-exempt, non-profit association formed under section 501(c)(6) of the Internal Revenue Code. Our members are independent broker-dealers who do business with the public and independent financial advisors affiliated with broker-dealers.

We are pleased to offer the *2010 FSI Broker-Dealer Financial Performance Study* as an exclusive benefit to FSI broker-dealer members and wish to thank all of the participating firms who contributed to the success of this annual project. We encourage you to take advantage of all the exclusive benefits of your firm's membership and look forward to your participation again next year. For more information, please visit our Web site at <http://www.financialservices.org>.

FA Insight LLC provides research and consulting services to financial advisory firms and those that service or work with these firms. FA Insight provides clients with actionable insight that is based on a powerful combination of unique marketplace data, consulting and analytical expertise, and deep knowledge of financial advisors and their business environment. Core services focus on: performance benchmarking, "best practices" research, strategic business planning, organizational design and compensation modeling. For more detail please visit the FA Insight Web site at <http://www.fainsight.com>.

## Acknowledgments

We gratefully acknowledge the 51FSI member firms who committed their time to compile and report data for the benefit of this initiative. We extend a special thanks to the volunteers on the 2010 Broker-Dealer Financial Performance Study Task Force: Amy Webber, Bardea Huppert, Milton Fritts, Greg Williams and Matt Bauler.

# 2010 Financial Performance Study

## Analysis of Results

### Overview/Executive Summary

The sudden and sharp downturn of financial markets in late 2008 continued to plague broker-dealers in 2009. The combination of greatly decreased revenue and an inability to adequately reduce expenses resulted in the operating profit margin dropping significantly for the typical broker-dealer in our survey. The median margin fell from 2.1% in 2008 to 0.01% in 2009 (Figure 1).

**Figure 1: Median Operating Profit Margin, 2004–2009**

The industry average profit margin of .05% for 2009 was only marginally higher than median profit, and much less than the average operating profit margin of 3.3% experienced by last year's participating broker-dealers. Even the largest firms were barely profitable, reporting an average operating profit margin of just 0.2%.

Reviewing the different types of broker-dealers discloses a wide disparity in profitability between independent firms and those affiliated with an insurance company. Both firm types experienced declines in operating profit margin between 2008 and 2009 of about two percentage points. Similar to past years, however, the typical independent firms maintained profitability with a 1.9% margin while insurance affiliates, on median, registered a 2.8% operating loss.

**Figure 2: Median Operating Profit Margin for Independent and Insurance Firms, 2008–2009**

Regardless of whether an insurance broker-dealer is run as a profit center (71% of insurance firms) or a cost center, most of them failed to earn a positive operating profit in 2009. Insurance firms with a goal to maximize profit earned a median of -1.3% operating profit margin. Those operating with a goal to just break even fared even worse, with a median operating profit margin of -5.2%.

Barely half of all firms earned a positive operating profit in 2009, the lowest percentage of firms with positive income in the survey in more than a decade. Figure 3 details the percentage share of participating firms making a positive operating profit as well as the market return over the last decade. The Russell 3000® broad market securities index is used as a proxy for financial market performance.

**Figure 3: Percentage of Profitable Firms and US Equity Market Return, 1999–2009**

While annual market return was 28% by the end of 2009, a notable increase from the prior year, this recovery did not get underway until the spring of 2009 and broker-dealers' revenue clearly lagged further behind. As a result of the presently improving economic picture, next year's study results for 2010 should show a significantly higher proportion of profitable firms. This pattern could very well mimic what the industry experienced after coming out of the last bear market in 2003.

Figure 4 further demonstrates the disparity of profitability achieved by this year's participating firms. More firms had a profit margin below negative 4.0% than firms exceeding positive 4.0%. Only 16% of firms reported an operating profit margin greater than 4.0%, compared with 28% of firms last year.

**Figure 4: Number of Firms by Operating Profit Margin**

Like operating profits, gross profit (revenue less direct expenses) decreased both in median and average terms this year. Average gross profit margin showed the biggest drop, decreasing from 23.1% in 2008 to 20.9% in 2009. Declining revenues acted as a powerful catalyst to compress profit margins. Reviewing financials for just the group of 43 firms that participated in both this year's and last year's studies, the typical drop in firm revenue was 14%.

Shrinking revenue also served to shift the composition of participating firms when grouped by level of revenue. The study's largest firms, those with more than \$250 million in revenue, accounted for 20% of participants last year but just 10% of firms this year. Figure 5 further details the change in overall survey participants by revenue size between 2008 and 2009.

**Figure 5: Percentage of Study Participants by Revenue, 2008–2009**

While revenue dropped dramatically for broker-dealers, their composition of revenue changed less so, particularly when we look at the firms that participated in both this year’s and last year’s studies (Figure 6). The share of revenues generated from mutual fund commissions registered the biggest changes, dropping from 16.6% of revenues to 11.7% from 2008 to 2009. Revenue not paid out grew from 7.0% to 9.4%.

**Figure 6: Distribution of Firm Revenue for Repeat Survey Participants, 2008–2009**

On the expense side, firms continued to struggle as well. For the survey's group of 43 repeat participants, average operating expenses jumped from 17.9% in 2008 to 20.4%. Reviewing changes in both overall firms' expenses and those of the repeat participant firms, the biggest increases came in the form of parent/third-party administrative fees, computer expenses and employee benefits. For repeating firms, expenses related to salaries and wages grew 0.6% between 2008 and 2009. Firms have not had either the interest or flexibility to adjust staffing levels in response to the economic climate, as the revenue per employee fell again, from \$952,518 in 2008 to \$859,186 in 2009.

## **High-Profit Firms**

Despite the struggles with revenue and expenses that plagued many firms in 2009, a select group of firms were able to achieve a respectable level of profitability. Review of the common practices among these more successful firms can help other firms identify ways to improve their own profitability.

The top-performing firms are distinguished on the basis of profitability and are referred to in the study results as "high-profit" firms. High-profit firms are defined as any firm in the top 25% or upper quartile of respondents in terms of operating profit margin. Results for high-profit firms are separated from "other" firms. For this year's report, respondents with an operating profit margin of 3.0% or higher were designated high-profit. In 2008, the high profitability barometer was set at 4.5%, indicating even the industry's better-performing firms are not immune to the effects of the economic climate.

The typical high-profit firm earned a profit margin of 5.5% in 2009, compared with their lower-earning peers who operated at a loss with a median margin of -1.4%. This year the distribution of high-profit firms shifted more toward the larger firms. In 2008, 71% of high-profit firms made at least \$54 million in annual revenue. This year, nearly all of the firms, 91%, achieved that revenue level and higher. As shown in Figure 7, 40% of all firms grossing more than \$250 million in revenue were deemed high-profit.

**Figure 7: Distribution of High-Profit Firms by Revenue Size**

While small firms have tended to demonstrate lower profitability in past years, the weak economic climate appears to have exacerbated the performance imbalance between larger and smaller broker-dealers.

Whether the high-profit firm is small or large, there are several themes that are common among high-profit firms compared with others. Most noteworthy are the following:

- Greater productivity per advisor
- Higher payouts for mid-range producers
- Greater acceptance and reliance on fee business
- Greater productivity per employee
- Lower operating expenses

All of these factors interact to drive greater profitability but perhaps the most important distinguishing characteristic of high-profit firms is their ability to get more productivity out of advisors as well as their home-office employees.

The advantage in revenue per advisor is most significant. At high-profit firms in 2009, a typical advisor generated \$225,198 in revenue, which is 34% greater than the \$167,714 generated per advisor at other firms. At high-profit firms the majority of advisors, 56%, are above \$75,000 in production. In contrast, a similar share of advisors, 57%, are at or *below* \$75,000 in production at other firms.

High-profit firms managed to extend this advantage in 2009. Across the industry, firms increased their average revenue per advisor during the year largely due to net depletion of smaller-producing advisors. High-profit firms appeared to be more aggressive in pruning and refining their advisor base, however. Relative to the typical high-profit firm in 2008, per advisor revenue for high-profits in 2009 was 48% greater. This compares to a 30% increase for other firms.

Bigger producing advisors have consistently been a hallmark of high-profit firms for several years running. These firms prosper by avoiding the tremendous cost drag associated with a larger stable of small producers given that a certain minimum level of fixed costs is associated with servicing any advisor, regardless of size.

Two other distinctive traits related to high-profit firms support their ability to attract and retain higher-producing advisors: payout structure and openness toward fee business. Consistent with their greater share of \$75,000 plus producers, high-profit firms offer a payout structure that, relative to other firms, becomes more favorable once an advisor gets beyond \$75,000 in production (Figure 8). Between \$100,000 and \$500,000 in production the gap in payout is greatest. This is the production range that is likely the most profitable to serve—these advisors are big enough for the broker-dealer to sufficiently cover fixed costs, yet not so big that advisors demand a greater and more costly level of ongoing service.

**Figure 8: Median Advisor Payout by Production Level, High-Profit Firms and Others**

A greater acceptance and reliance on fees as related to asset management and advice is also a common theme and a factor that tends to attract bigger-producing advisors. As noted in Figure 9, fees averaged 30% of revenue for high-profit firms, a share that is much higher than the 22% of revenue found in other firms.

**Figure 9: Average Distribution of Fees by Revenue Source, High-Profit Firms and Others**

In addition to more frequent use of fee business in their corporate RIA, high-profit broker-dealers are also more likely to allow advisor-owned RIAs. This is particularly true for “planning-only” RIAs. Advisors are allowed to have their own RIA for planning purposes in 77% of high-profit firms compared with 60% of other firms.

Greater revenue per advisor, in turn, contributes to greater revenue per home office employee, lower expenses, and ultimately a more profitable broker-dealer. In 2009 high-profit firms generated 8% more revenue per employee than other firms. While high-profit firms experienced a 3% decline in revenue per employee from 2008 to 2009, the drop was not as severe as the 19% decline experienced by other firms. This finding suggests that among other measures high-profit firms may be quicker than others to preserve profitability by more assertively trimming back home-office employees.

High-profit firms also have significantly lower operating expenses as a percentage of their revenues, with total expenses being 6.5 percentage points lower than other firms. The major component of that difference is the amount spent on staff salaries. High-profit firms pay out 5.5% of revenue in salaries and wages compared with 8.3% of revenue spent in other firms. This does not necessarily mean they are skimping on their compensation levels to employees, however. These firms may simply be applying better processes and management techniques to achieve more with lower-cost or more productive employees.

## Advisor Compensation

Both independent and insurance firms made noticeable changes to their payout grids this year (Figures 10 and 11). These revisions are significant in light of payout schedules having been left largely unchanged in previous years. A tough economic climate provided the likely motivation and confidence for both firm types to generally adjust payout percentages downward. The production ranges where adjustments were applied differed, however, according to firm type.

**Figure 10: Median Advisor Payout in Independent Firms, 2008–2009**

Decreases for the typical independent firm targeted the lower end of the production scale. For advisors between \$50,000 and \$250,000 in production, payout decreases ranged from two to five percentage points. Insurance firms dropped payouts most notably at the low and high ends of the production spectrum. The \$25,000 producer suffered the largest decline, dropping to a 60% payout compared with 65% last year for the typical firm. Payouts dropped two to three percentage points for insurance-affiliated advisors with \$350,000 or more in production.

**Figure 11: Median Advisor Payout in Insurance Firms, 2008–2009**

Relative to independent firms, insurance payouts are lower at every production level—a five-percentage-point gap is typical with the widest differences at the lower and higher ends of the production spectrum. As a result, the average amount of commissions paid out as a percentage of revenue for an insurance broker-dealer is 73.6%, more than a percentage point lower than the 74.8% average for independent broker-dealers.

While the insurance broker-dealer may be paying out less in commissions, these firms tend to pay out more for advisor services. Insurance broker-dealers are more apt to cover 100% of the cost for most all major advisor service items, ranging from stock quotes to client relationship management software. Factoring in the tendency to provide these services narrows the cost gap for advisors who affiliate with an insurance broker-dealer. This is especially true for large producers who tend to rely more heavily on these services.

**Figure 12: Propensity to Cover Various Service Costs**

| Service Item                  | Percentage of Firms Covering 100% of Cost |           |
|-------------------------------|-------------------------------------------|-----------|
|                               | Independent                               | Insurance |
| Technology Fee                | 25%                                       | 46%       |
| Delayed Quotes                | 33%                                       | 77%       |
| Portfolio Management Software | 14%                                       | 57%       |
| Investment Research           | 0%                                        | 31%       |
| Client Account Access         | 39%                                       | 87%       |
| CRM Software                  | 38%                                       | 58%       |
| Help Desk                     | 56%                                       | 82%       |

### **Recruiting and Retention**

According to industry trade press, many independent broker-dealers experienced a banner recruiting year in 2009, picking up new advisors in particular who had become disenchanted with the wirehouse system. But how accurately do these reports reflect the independent broker-dealer's ability to expand its talent base? In many respects, with regard to recruiting and retention, the challenges for independent broker-dealers grow more serious each year.

Recruiting success is only part of the equation for growing a broker-dealer's talent base. The average advisor continues to age but broker-dealers are making limited progress in offering succession solutions, grooming less-experienced advisors from within and improving overall retention of talent. As noted in past FSI benchmarking studies, a good share of advisors is approaching retirement age. This proportion gets larger every year. Just two years ago, 32% of advisors were age 55 or older. Today this share has grown to 36% (Figure 13).

**Figure 13: Distribution of Advisors by Age**

Despite the large numbers of advisors trending toward retirement, broker-dealers are making only limited investments in providing solutions for these advisors to succeed out of their practices. Offering succession solutions can be a key means for a broker-dealer to retain client accounts, remain attractive for experienced advisors and establish career path opportunities for less-experienced advisors.

The good news is more broker-dealers are making educational assistance available with regard to succession. Succession education is now offered by 70% of firms, up from 65% last year. All of the survey's largest firms offered succession education (Figure 14). Less encouraging is the fact that only the largest firms tend to have dedicated budgets for succession assistance, which are minimal at best. For firms with more than \$250 million in revenue the typical budget in 2009 for succession programs was \$60,000 with no increase in budget planned for 2010.

**Figure 14: Use of Succession Programs by Firm Size**

Independent and insurance firms are both very likely to offer succession education programs. However, the insurance firms fall behind the independents when it comes to offering buyer/seller matching programs. Seventy-three percent of independent firms offer a formal or informal matching program compared with only 57% of insurance firms. Similarly, more than half of independent firms offer advisors some type of transaction assistance, such as access to a recommended network of service providers, or preferred pricing on professional services. Only 37% of independent firms offer this type of assistance to their advisors. It is conceivable, however, that the parent of the insurance broker-dealer is providing assistance related to buying and selling a practice, which was not captured in the survey. If this is the case the current survey data may underestimate the extent to which insurance-affiliated advisors have access to assistance.

While there may be lack of focus concerning succession, this is not the case with firms' emphasis on recruiting. The typical firm directly spends nearly half of a million dollars annually on recruiting. Proportionately, recruiting effort is heaviest for small firms, as demonstrated in Figure 15.

**Figure 15: Proportional Recruiting Effort, Smallest and Largest Firms**

| Ratio                                             | Firm Size in Annual Revenue |                            |
|---------------------------------------------------|-----------------------------|----------------------------|
|                                                   | Less than \$25 Million      | Greater than \$250 Million |
| Recruiting Budget as a Share of Revenue (Average) | 1.5%                        | 0.3%                       |
| Advisors Per Internal Recruiter (Median)          | 78                          | 274                        |

Through recruiting efforts, the number of new advisors firms added during 2009 represented, on average, a 13% increase compared with the number of advisors they started with at the end of 2008. Despite firms' best efforts, however, the recruitment of new advisors has not kept pace with firms' ability to retain advisors. Over the course of 2009, for every five advisors a firm recruited, another six on average were lost.

Figure 16 further details the dynamics of advisor gains and losses according to ranges of advisor production. The figure demonstrates that much of the movement into and out of a broker-dealer is relegated to advisors producing less than \$50,000 in revenue. Additionally, it is this group that is largely responsible for the net outflow in advisors, which can be interpreted as a positive in that, on net, firms are shedding their least productive advisors. This is a second-best solution, however, compared with growing weaker producers into stronger and profitable advisors.

**Figure 16: Median Advisors Lost and Added by Level of Production**

A certain amount of turnover is healthy for any organization in terms of weeding out stagnant performers and bringing in new energy and fresh thinking to the firm. High turnover, however, is costly in terms of the inability of the firm to recoup start-up costs related to getting an advisor up to speed. Extraordinary turnover also places a drag on the firm's ability to foster a sense of community and shared culture within its advisor base. During 2009 advisor turnover across all firms, at 15%, remained unchanged from 2008. The industry's smallest, as well as largest, firms experienced the lowest turnover (Figure 17).

**Figure 17: Median Advisor Turnover by Firm Size**

While aging advisors may also be a contributor, the high broker-dealer turnover rates are largely a result of independent broker-dealers being heavily reliant on other independent broker-dealers as a source of new recruits (Figure 18). Firms expect more than two-thirds of recruits to come from their direct competitors in 2010. This dominant share is down from the expectation of 72%, however, in 2008. Relative to 2009, firms also expect to be less reliant on wirehouses for recruits, now that these firms appear to have stabilized compared with the tumult experienced in late in 2008 and early 2009. An encouraging sign is the strong growth in "Other" or non-traditional sources, increasing from 12% in 2008 to 20% in 2010. Much of the "Other" share in 2010, 13% of all recruits, is expected to be individuals new to the industry.

**Figure 18: Expected Sources of New Advisors, 2008–2010**

## Asset Management and Advisory Fees

Based on all participating firms both this year and last, it would appear that asset management and advisory fees as a percentage of revenue decreased from 2008 to 2009. The trend appears to result simply from a different mix of firms participating in this year's study, however. When we isolate the group of 43 firms who participated in both last year's and this year's studies, asset management and advisory fees averaged 25.3% of all firm revenue in 2009, up slightly from the 24.8% this same firm group reported last year. The bulk of broker-dealer fee revenue, slightly more than half, originates from advisor directed accounts (Figure 19).

**Figure 19: Composition of Asset Management and Advisory Fee Revenue**

The industry's largest firms, as well as independent firms, are most reliant on fee business. As illustrated in Figure 20, firms with revenue greater than \$250 million are nearly twice as dependent on fees relative to the industry's smallest broker-dealers, those firms with revenues less than \$25 million.

Valid arguments exist either way with regard to whether firms conduct more fee business because they are large or whether firms become large because they accommodate fee business. In support of the former, certain economies of scale may better equip larger firms in accommodating and profiting from fee business. For example, larger firms may have the ability to more cost-effectively provide infrastructure and monitor compliance required for advisors to conduct fee business. In support of the latter argument, fee-friendly firms tend to have an advantage in attracting and retaining larger producing and more profitable advisors, which facilitates growth of the broker-dealer.

**Figure 20: Percentage of Revenue Derived from Fees by Firm Size**

Relative to insurance firms, independent firms have long applied more liberal policies with their advisors concerning conduct of fee business. The great majority of independent broker-dealers tend to allow advisors to maintain their own RIAs for both financial planning as well as asset management (Figure 21) and the share has increased in recent years. In contrast, the share of insurance firms allowing advisor-owned RIAs for either purpose has declined over the year.

**Figure 21: Allowance of Advisor-Owned RIAs in Independent and Insurance Firms**

As a result, the independent firms have a history of generating more fee revenue. The most recent year was no exception when independents garnered 30% of revenue from fees compared with just 22% for insurance broker-dealers (Figure 22).

**Figure 22: Average Fees as a Percentage of Revenue in Independent and Insurance Firms**

Additionally, as we have observed in years past, fee business is also associated with broker-dealer profits. High-profit firms generate a much greater share of revenue from asset management and advisory fees than other firms. Fees average 30% of revenue for firms in the highest quartile of profitability compared with 22% of revenues for other firms.

Another recurring observation is that those broker-dealers that allow advisor-owned RIAs are more profitable than those that do not. Further, those firms that allow planning-only RIAs are the most profitable of all firms, generating a typical profit margin of 3.9% compared with a negative 3.0% margin for those firms that do not allow advisors to maintain any type of RIA.

These results may help to explain why the proportion of firms that allow an RIA for financial planning has held steady in recent years, yet firms appear less interested in having advisors manage assets through an advisor-owned RIA. While 63% of broker-dealers allowed their advisors to oversee assets through their own RIA in 2007, in 2009 just 53% allow this. Related, the typical firm reported declining AUM relative to their advisors' own RIA, with advisor RIA AUM in 2009 at less than half of what was managed in 2007 (Figure 23). In contrast corporate RIA assets have increased.

**Figure 23: AUM in Corporate and Advisor-Owned RIAs, 2007–2009**

## Compliance and Litigation

Increasing regulations imposed upon the financial industry and the costs associated with complying with them are an important issue for all broker-dealer firms. The good news is that based on some of the trends we saw this year, broker-dealers seem to be better equipped to handle the regulations.

Comparing the same 43 firms that participated in studies for the past two years, the overall expenses paid toward legal fees, litigation and customer settlements as a percentage of revenue decreased slightly, from 0.9% to 0.8%. The typical number of new complaints throughout the year is also down slightly, from 30 in 2008 to 29 this year. The typical broker-dealer's cost to defend complaints is down 17% from 2008, and the typical amount of total settlement dollars paid is down 32% from last year.

Perhaps one reason for the decrease in complaints and litigation could be an increased focus in staffing compliance and licensing positions. The total number of FTE dedicated to compliance and licensing in a typical firm grew one position this year to 15 employees. Looking at our group of repeat participants, the number of compliance/licensing FTE in the typical firm grew from 15 in 2008 to 17 in 2009.

Understandably, the number of FTE dedicated to compliance and licensing varies depending on the size and type of broker-dealer. As broker-dealers grow and take on more advisors and clients, the need for additional compliance staff increases. On a per advisor basis, however, more compliance and licensing staff is required by the industry's smallest firms. For example, the typical less than \$25 million firm employs 1 compliance or licensing staff member for every 18 affiliated advisors. This ratio ranges from 27 to 29 for larger firms.

A distinction also arises between the numbers of staff in independent firms compared with insurance firms. Due to the amount and type of products they offer, insurance firms require more oversight and therefore, more staff members dedicated to those tasks. The typical insurance firm in this year's study employed 21 compliance and licensing personnel, compared with only 8 in independent firms. Because of their need for additional oversight, they typically employ one compliance/licensing staff member for every 28 advisors. Compliance/licensing staff at independent firms handle 31 advisors per staff member.

A sign of stepped up enforcement, one area that did not decrease this year is regulatory inquiries. Among repeat participants, about a quarter of firms experienced inquiries in 2008. That percentage nearly doubled in 2009. The triggers for regulatory inquiries varied depending on firm but included late filings, variable annuity sales practices and REIT-related issues.

While it is an encouraging sign that the financial burden of compliance appears to be holding fairly constant as of late, it is critical for firms to remain focused on the importance of compliance. The potential cost of failing to conform to regulations far outweighs the cost of hiring a few additional staff members dedicated to the firm's oversight.

### **Independent Broker-Dealers**

Independent broker-dealers comprised 44% of the respondents in this year's study, which is the same proportion that participated in 2008. In this study, the "independent" group consists of any broker-dealer that does not have a parent company in the business of insurance. As Figure 24 shows, average pre-tax operating profit margin for independent broker-dealers has changed little in recent years. Despite the challenging economic climate margins declined only slightly, from 4.6% in 2008 to 4.4% in 2009. Compared with 2008, independents became much stronger at managing their expenses in 2009. Overhead as a percentage of revenue for independent firms dropped from 20.3% in 2008 to 15.5% this year. As they did last year, independents easily outperformed insurance broker-dealers in terms of average operating profit margin.

**Figure 24: Average Independent Broker-Dealer Profit Margins, 2007–2009**

For independent broker-dealers, staff salaries were the biggest area of decrease for overhead expenses—decreasing from 8.5% of revenue in 2008 to 5.9% in 2009. In a trend similar to what we see with high-profit versus other firms, independents tend to have higher revenue per staff member than insurance firms.

As we have seen in the last few years, advisors that affiliate with independent broker-dealers maintained higher levels of production than those tied to insurance broker-dealers. Smaller-producing advisors who generated less than \$100,000 last year comprise only 59% of all advisors in independent firms, compared with 73% of advisors in insurance firms. Figure 25 details the distribution of advisors by production in the independent and insurance advisor networks.

**Figure 25: Distribution of Advisors by Production, Independent and Insurance Firms**

### Insurance Broker-Dealers

Broker-dealers with a parent in the business of insurance comprised 56% of respondents in this year's study. As insurance firms struggled with the challenging economic climate, the downward trend of operating profits continued in 2009. As Figure 26 displays, insurance firms averaged a negative 1.8% profit margin in 2009.

**Figure 26: Average Operating Profit Margin for Insurance Broker-Dealers, 2004-2009**

The 2009 fiscal year was another tough one for insurance broker-dealers, with two-thirds of insurance broker-dealer participants failing to earn a profit, the highest percentage of insurance firms with negative operating profit margins in recent years. Figure 27 demonstrates that higher overhead expenses on top of lower gross profit margins both contributed to the negative pre-tax profit margins experienced by insurance broker-dealers in 2009.

**Figure 27: Average Insurance Broker-Dealer Profit Margins, 2007–2009**

Insurance broker-dealers are showing signs of improvement in their performance, however, in other areas. In particular, their advisor productivity is up sharply. Revenue per advisor is up 78% from 2008 and commission per advisor is up 52%. The productivity figures are now very similar to their independent counterparts, which is a major change from last year when they generated less than half the revenue per advisor of independent firms.

# Reader's Guide

## Report Organization

The *2010 FSI Broker-Dealer Financial Performance Study* reviews in detail the financial as well as operating practices of FSI broker-dealer members. Results are typically presented by size of firm, type of broker-dealer and profitability. In addition to this reader's guide, this report has two other major sections:

- Results Analysis
- Detailed Data Tables

### ***2010 Results Analysis***

This summary offers a detailed review and interpretation of the survey findings, including a perspective on this year's trends as they relate to recent history.

### ***Detailed Data Tables***

Detailed data tables are presented at the back of this report. These financial and operating statistics begin on page 32. Survey results are provided based on all participating firms. Additionally, the data is typically broken out by firm profitability, size and ownership type. Figures are provided for a total of up to nine sub-groups in all.

## Methodology

### ***Data Collection***

Survey data collected from 51 FSI broker-dealer member firms formed the basis for this study. Participation in the study was voluntary and restricted to members of FSI. The survey fielded in 2010, from February 12 to May 7, with firms reporting data as of year-end 2009.

All surveys were submitted directly to FA Insight. All firm-specific information provided is strictly confidential. No persons other than FA Insight project team members were, or will be, granted access to individual company data.

FSI study task force members, representatives from FSI and FA Insight designed the survey form for this year's study.

### ***Data Compilation***

The data for each participant were reviewed separately following submission and all ratios were calculated for individual participants. While FA Insight did not verify the accuracy of the information submitted, respondents were frequently contacted to clear up any discrepancies noted in their submission.

A number of participants provided their financial information in the firm's original chart of accounts rather than the one used in the survey form. To make statements comparable across companies, FA Insight translated firms' existing charts of accounts to the survey form's chart of accounts, consulting with participants when clarification was needed.

In order to present on as much of the reported data as possible, compiled data was based on all responses regardless of whether a firm completed all parts of a question. When data groupings yielded fewer than three responses, however, no estimates were published. In these cases "N/A" is used in the data tables to indicate an insufficient sample size.

### ***Common-Sized Financial Statements***

Fifty broker-dealers completed detailed income statement and balance sheet forms using 2009 financial data. Respondent surveys not containing sufficient detail were excluded from the calculation of the common-sized financial statements. For example, if commission revenue was not detailed by product type, the survey data was not used in calculating the common-sized income statements. To calculate the common-sized financial statements for all respondents, a simple average was used.

### ***Averages, Medians and Quartiles***

The bulk of presented data in this report is composed of averages or medians. While averages are often the best representation for the industry or a group as a whole, medians tend to better represent the experience of the typical broker-dealer firm.

The median is the halfway point in a data group, where half the survey results have greater value and half have lesser value. Because extreme outliers in the sample have less influence, medians are more helpful than averages for depicting the typical value in a group of values.

If the group contains an odd number of values, the median is the value precisely in the middle when the values are ranked in order of magnitude. When the group has an even number of values, the median is defined as half the distance between the two values in the middle.

Median ratios are often a common source of confusion. Median revenue per advisor, for example, is correctly calculated by first calculating revenue per advisors for all the firms in the survey. Next, the median is derived from this group of firm ratios. While median revenue for all firms divided into median number of advisors produces a benchmark ratio as well, this calculation cannot be considered a true median.

Quartiles are a natural extension of a median. An upper quartile is used to distinguish a group of high-profit firms in the results analysis and the detailed data tables. The upper-quartile dividing line is a value such that 75% of the values in the sample are below it. Similarly, the lower quartile begins with the value such that 75% of the values in the group are above it.

### **Reporting Groups**

In addition to presenting survey results for all participating broker-dealers, this report groups survey data according to firm profitability, size and ownership. Estimates are provided for a total of nine sub-groups.

### ***Profitability***

Results for high-profit firms are distinguished from “all others” based on operating profit margin. High-profit firms are defined as any firm in the top 25% or upper quartile of respondents. For this year’s report, respondents with an operating profit margin of 3.0% or higher were designated high-profit. Firms with lower profitability made up the “all other” group.

### ***Firm Size***

Participants were grouped by size based on reported 2009 total annual revenue. Revenue categories are as follows: Under \$25 million, \$25 million to \$54 million, \$54 million to \$100 million, \$100 million to \$250 million and greater than \$250 million. In previous years, the smallest group comprised firms under \$17 million in revenue. However, due to the low number of participants in this group last year, this category was expanded to under \$25 million. This allows for data to be reported in more categories than last year for this revenue group.

### ***Ownership***

This year, we modified the ownership-related questions in the survey to better distinguish the “Insurance” and “Independent” groups. Respondents were asked if they were owned by a parent company and, if so, if the parent was in the business of insurance. Those who said yes to both of those questions comprise the “Insurance” group of firms. The firms that are either not parent-owned or owned by a holding company or parent other than an insurance company are included in the “Independent” group.

## **Explanation of Financial Information**

---

### **Liquidity**

Liquidity ratios measure a company’s ability to meet its short-term obligations.

#### ***Current Ratio***

*Formula:*

*Total Current Assets/  
Total Current Liabilities*

The current ratio shows a company’s ability to pay obligations due within 12 months with assets that are expected to turn to cash within 12 months. A higher current ratio indicates better liquidity, and a lower current ratio may indicate that the company will have difficulty meeting short-term obligations. The key factors that influence this ratio are accounts receivable, commissions, payables and turnover.

**Working Capital**

Formula:

$$\frac{\text{Total Current Assets}}{\text{Total Current Liabilities}}$$

Working capital is the capital a company needs on a day-to-day basis to produce revenue. For a broker-dealer operation, the working capital typically consists of commissions receivable and securities held for resale less the commissions payable to the advisors and the amounts payable to vendors. A high-dollar number for working capital may indicate either very good financial health (if the cash balance is high) or problems with managing the receivables (if the cash balance is low).

**Sales-to-Working Capital Ratio**

Formula:

$$\frac{\text{Total Revenue}}{\text{Working Capital}}$$

The sales-to-working capital ratio measures how much revenue a company produces for a dollar of working capital. The higher the ratio, the more effective the company is in managing its working capital.

---

**Safety**

Safety ratios measure a company's ability to withstand adversity.

---

**Debt-to-Equity**

Formula:

$$\frac{\text{Total Liabilities}}{\text{Total Equity}}$$

Debt-to-equity, also known as leverage or debt-to-net-worth, compares the amount of funds invested by creditors with the amount of funds invested by owners.

The higher the debt-to-equity ratio, the more at-risk the business is in the event of an economic downturn. A heavy debt load increases a company's ability to grow during good times; however, a heavy debt load decreases a company's ability to withstand a downturn in profitability. The key factors that influence the debt-to-equity ratio are the company's borrowing, profitability and capital (i.e., sources of funds other than debt).

---

**Profitability**

Profitability ratios measure a company's profitability at various levels.

---

**Gross Profit Margin %**

Formula:

$$\left(\frac{\text{Gross Profit}}{\text{Total Revenue}}\right) \times 100$$

The gross profit margin equals gross profit divided by revenue. It represents the percentage of each revenue dollar available for operating expenses.

**Operating Profit Margin %**

Formula:  
 $(\text{Operating Profit} / \text{Total Revenue}) \times 100$

The operating profit margin is the percentage return on revenue after all operating expenses and before other income and expense.

**Pre-Tax Profit Margin %**

Formula:  
 $(\text{Pre-Tax Profit} / \text{Total Revenue}) \times 100$

The pre-tax profit margin is the percentage profit on revenue after all expenses except income taxes.

**Net Profit Margin %**

Formula:  
 $(\text{Net Profit} / \text{Total Revenue}) \times 100$

The net profit margin is the percentage return on revenue after all expenses, including income taxes.

---

**Employee/Office Productivity**

Employee productivity ratios measure a company's employees' productivity using different measures of efficiency.

---

**Revenue per Employee (FTE)**

Formula:  
 $\text{Total Revenue} / \text{Number of Full-time Equivalent Employees}$

The revenue per employee provides a measure of the productivity of employees.

**Commission per Advisor**

Formula:  
 $\text{Total Commission Revenue} / \text{Number of Advisors}$

The commission per advisor measures the productivity of the typical advisor.

**Revenue per Advisor**

Formula:  
 $\text{Total Revenue} / \text{Number of Advisors}$

The revenue per advisor is another measure of productivity. Compared with commission per advisor, revenue per advisor also includes assets under management and other non-commissionable production.

---

**Commission Analysis**

Commission analysis looks at how many times a year commissions are paid, as well as by number of days and what the commission payout percentage is based on, financial statement values for commissions received and commissions paid during the year.

**Commission Payable Turnover**

Formula:

$\frac{\text{Commissions Paid}}{\text{Commissions Payable}}$

This is a modified version of accounts payable turnover using commissions paid and total commissions payable at end of the year.

**Commission Payable—Days**

Formula:

$\frac{365}{(\text{Commissions Paid} / \text{Commissions Payable})}$

The median commission payable in days.

**Payout Ratio**

Formula:

$\frac{\text{Commissions Paid}}{\text{Commissions Received}}$

The payout ratio is simply the ratio of commissions paid to commissions received based on financial statement data.

---

**Cash Flow Analysis**

Cash flow analysis looks at a broker-dealer's ability to generate operating cash flow from revenues and profits and the relationship of cash flow to assets and equity. Cash flow is a critical measure of a firm's ability to withstand an economic downturn, as well as measuring debt serviceability.

**Cash Conversion Efficiency**

Formula:

$\frac{\text{Operating Cash Flow}}{\text{Total Revenue}}$

The cash conversion efficiency ratio measures the ability of revenue to generate operating cash flow. It indicates how much operating cash flow each dollar of revenue generates.

**Operating Cash Flow to Profit**

Formula:

$\frac{\text{Operating Cash Flow}}{\text{Net Income}}$

Operating cash flow to profit indicates how much operating cash flow each dollar of profit (net income) generates.

**Operating Cash Flow Return on Assets (ROA)**

Formula:

$\frac{\text{Operating Cash Flow}}{\text{Total Assets}}$

Operating cash flow ROA measures the return on assets generated by operating cash flow.

***Operating Cash Flow  
Return on Equity  
(ROE)***

*Formula:*

*Operating Cash Flow/  
Total Equity*

Operating cash flow ROE measures the return on equity generated by operating cash flow.

---

**Common-Sized  
Statements**

Common-sized financial statements express each account as a percentage of either revenue (for the income statement) or total assets (for the balance sheet). The common-sized statements allow for a consistent comparison between firms and different historic periods and establish a relationship between revenue and expenses or between the items on the balance sheet. The common-sized financial statements for broker-dealers were calculated by taking the average value for all accounts and expressing them as a percentage of the average total.

# Common-Sized Income Statements

| Common-Sized Income Statement - All, High-Profit, and Non-High-Profit Broker-Dealers |                    |                    |                      |    |                    |               |    |                    |               |

Formed in January 2004, the Financial Services Institute's (FSI) mission is to create a healthier regulatory environment for independent broker-dealers and their affiliated independent financial advisors through aggressive and effective advocacy, education, and public awareness. FSI is a tax-exempt, non-profit association formed under section 501(c)(6) of the Internal Revenue Code. Our members are independent broker-dealers who do business with the public and independent financial advisors affiliated with broker-dealers.

We are pleased to offer the *2011 FSI Broker-Dealer Financial Performance Study* as an exclusive benefit to FSI broker-dealer members and wish to thank all of the participating firms who contributed to the success of this annual project. We encourage you to take advantage of all the exclusive benefits of your firm's membership and look forward to your participation again next year. For more information, please visit our Web site at <http://www.financialservices.org>.

FA Insight LLC provides research and consulting services to financial advisory firms and those that service or work with these firms. FA Insight provides clients with actionable insight that is based on a powerful combination of unique marketplace data, consulting, and analytical expertise, and deep knowledge of financial advisors and their business environment. Core services focus on: performance benchmarking, "best practices" research, strategic business planning, organizational design, and compensation modeling. For more detail please visit the FA Insight Web site at <http://www.fainsight.com>.

## Acknowledgments

We gratefully acknowledge the 58 FSI member firms who committed their time to compile and report data for the benefit of this initiative. We extend a special thanks to the volunteers on the 2011 Broker-Dealer Financial Performance Study Task Force: Gadder Feaman, Milton Fritts, Brock Guice, Bardi Huppert, Eileen Quint, and Amy Webber.

# 2011 Financial Performance Study Analysis of Results

## Overview/Executive Summary

### **Profitability**

The market recovery that took hold in late 2009 continued through 2010, leading to increased revenues for most broker-dealers. Overall, average revenue grew 18% based on the same group of 42 broker-dealers who participated in the study both this year and last year. Concurrently in 2010, firms pared back and better managed operating expenses following weak profit performance in 2009. Total operating expense as a percentage of revenue fell to 16.7%, down from 20.4% in 2009. Much of the expense drop related to salaries, wages, and payroll taxes in addition to declining parent or third-party administrative fees.

Greater revenue and a lower overhead expense margin combined for an improved median operating profit margin of 1.3% in 2010. While this is markedly higher than the median operating profit margin of 0.0% experienced in 2009, it is still far off the peak margin of 2.8% achieved in 2007 (Figure 1).

**Figure 1: Median Operating Profit Margin, 2004–2010**

A healthier economic environment is also reflected in the percentage of profitable respondents participating in the survey. More than 70% of firms realized profits in 2010, the highest share over the last three years and up sharply from the barely half of all firms that achieved positive profitability just one year prior. Despite the significantly more profitable firms in 2010 relative to 2009, the year's share was far short of the high percentages of profitable firms in 2006 and 2007. Figure 2 details the percentage share of participating firms making a positive operating profit as well as the market return over the last decade. The Russell 3000® broad market securities index is used as a proxy for financial market performance.

**Figure 2: Percentage of Profitable Firms and U.S. Equity Market Return, 2000–2010**

Consistent with an increase in profitable firms, the distribution of participating firms by operating profit margin shifted in 2010. In 2009, more firms had a profit margin below negative 4.0% than those with a profit margin above positive 4.0%. One year later, more than twice the number of firms experienced a 4.0% or better profit margin than those firms that were below negative 4% (Figure 3). Overall, 26% of firms enjoyed a margin of 4.0% or better, compared with only 16% of firms last year.

**Figure 3: Number of Firms by Operating Profit Margin**

**Revenue**

The revenue distribution of all the firms participating in the study has shifted since last year as well. Of this year’s participants, about 16% of firms were in the largest revenue size category with more than \$250 million in revenue; whereas only 10% of firms participating in last year’s study were in that category. Figure 4 shows the percentage share of current participants by total revenue.

**Figure 4: Participating Firms by Revenue**

In terms of revenue sources, as is often the case as security markets recover, the distribution of revenues shifted from commissions to fees (Figure 5). In particular, the combined revenues of mutual fund and insurance commissions fell from 40.2% of broker-dealer revenue in 2009 to 36.3% in 2010. As commission revenue cooled, asset management and advisory fees as a percentage of revenue grew more predominant—up to 28.1% in 2010 compared with 25.1% the year before. Because fees are often linked to the amount of assets managed, the 2010 increase is likely fueled most by market recovery as opposed to changing rep business practices.

**Figure 5: Distribution of Firm Revenue, 2009–2010**

**Independent and Insurance Broker-Dealers**

As in prior years’ studies, participating firms are also distinguished based on the extent to which a broker-dealer has ties to an insurance parent. This provides another useful perspective for analysis as insurance-affiliated broker-dealers often have different business goals and practices relative to other broker-dealers. In recent years our methodology for distinguishing “Insurance” firms from “Independent” firms has become increasingly tighter.

In the 2010 report, a broker-dealer was classed as insurance if the firm was owned by a parent that was in the business of insurance. In 2011 the standard narrowed, requiring that an insurance broker-dealer must not only be insurance-owned but the broker-dealer must also service agents of the insurance parent. All other firms, including those who are owned by an insurance-related parent but not catering to agents of the parent, were classified as “Independent.”<sup>1</sup>

<sup>1</sup>The revised methodology has been applied throughout this report. This includes all historical data where insurance and independent firms are distinguished, which were re-calculated to preserve comparability.

This year independent firms comprised approximately two-thirds of all firms in the study. As observed in recent years, independent firms continue to be more profitable, with a median operating profit margin of 1.7% in 2010 compared with 0.3% for their insurance-affiliated counterparts. The performance gap has narrowed considerably relative to 2009, however. While the median profit margin for independent firms only increased by a tenth of a percentage point since last year, insurance firms experienced a substantial increase (Figure 6).

**Figure 6: Median Operating Profit Margin, Independent vs. Insurance Broker-Dealers, 2009–2010**

Operating profits for insurance broker-dealers improved significantly from 2009 despite the fact that their gross profit margin (total revenue minus direct expenses) is actually down from that same year. The improved operating profit margin appears to be due solely to reduced operating expenses. In particular, the amount of revenue spent on parent or third-party administrative fees and salaries, wages, and payroll taxes is off substantially from 2009.

### High-Profit Firms

While the majority of firms this year were able to achieve some level of profitability, a select group of firms did exceedingly well in this area. Consideration of the common practices of these firms can help other firms identify ways to improve their own profitability.

Similar to past studies, the top-performing firms this year are distinguished based on their operating profit margin. Throughout the study they are referred to as “high-profit” firms, defined as any firm in the top 25% (or upper quartile) of respondents in terms of operating profit margin. Results of this high-profit group are separated from “other” firms in order to better gauge their performance and practices. This year respondents with an operating

profit margin of 4.5% were considered high-profit, which is up from last year’s profitability barometer of 3.0% and equal to the level set in 2008.

In 2010 the typical high-profit firm achieved a 9.5% profit margin, up sharply from the median of 5.5% for high-profit firms in 2009. This 2010 jump served to further widen the profitability gap between high-profit firms and others. Other firms also experienced a profit margin increase, but at nowhere near the level of improvement achieved by high-profits. In 2009 other firms operated at a median loss of 1.4%; in 2010 they were marginally profitable, achieving a 0.5% profit.

In 2009 profitability was closely correlated with firm size, with all but one of that year’s high-profit firms earning at least \$54 million in annual revenue. In 2010 the industry’s biggest firms still had a greater propensity to be high-profit, but firms of all sizes were able to achieve impressive levels of profitability. Figure 7 specifies the proportion of high-profit firms in the current study within each revenue size band.

**Figure 7: Distribution of High-Profit Firms by Revenue Size**

Better management of operating expenses surfaces as a key financial characteristic driving profitability for high-profit firms. The operating expense ratio for high-profit firms is 5.4 percentage points lower relative to other firms. The key areas for savings include employee benefits, parent administrative fees, and legal fees.

Consistent with lower legal fees, the typical high-profit firm had fewer new and total complaints than other firms, paid less toward legal defense and settlements, and also had fewer regulatory inquiries in 2010 than other firms. Surprisingly, high-profit firms achieve these results with proportionately less compliance/licensing staff. This suggests that either better processes and systems are in place to make compliance staff more effective, or high-profit firms are simply attracting high-quality reps who are less prone to be compliance risks.

Without question, superior-producing representatives are one major key to the success of high-profit firms in 2010 and in years past. The typical high-profit firm generates 63% more revenue per rep and 20% more commission per rep than other firms. Nearly one-third of reps with high-profit firms (32%) produce more than \$150,000 per year while 13% of reps in high-profit firms produce more than \$350,000 per year. In comparison, 23% of reps with other firms are over \$150,000 in production and just 8% are beyond \$350,000.

Payout structure helps to support the ability of high-profit firms to attract and retain higher producing reps. As shown in Figure 8, high-profit firms tend to have better payouts in the \$100,000–\$350,000 production range. This range incidentally can be an overlooked sweet spot for many firms in the sense that reps of this size are big enough to be profitable but not big enough that they are expecting or needing expensive servicing options.

**Figure 8: Median Payout Rate, High-Profit Firms and Others**

Another factor behind the ability of high-profit broker-dealers to attract and retain bigger-producing representatives is the broker-dealers’ openness to fee business and rep-owned RIAs. This is a common theme for high-profit firms that has been observed for several years running. High-profit firms earn more than one-third of their revenue through asset management and advisory fees, as opposed to only 23% in other firms (Figure 9).

**Figure 9: Average Distribution of Fees by Revenue Source, High-Profit Firms and Others**

High-profit firms are also more likely to allow representatives to have their own RIA for financial planning and/or asset management. Despite a lower median number of reps, the typical high-profit broker-dealer has nearly three times as many rep-owned RIAs as other firms and about five times the amount of assets in those RIAs. Assets in high-profit firm rep-owned RIAs, however, have dropped 12% on average since 2009. At the same time, AUM in the average high-profit’s corporate RIA has increased about 18% and is nearly twice as much as corporate RIA assets with other firms

This increase in corporate RIA AUM and decrease in rep-owned RIA assets suggests that broker-dealers are making their corporate RIA programs more attractive to reps. High-profit broker-dealers are more apt to allow reps to utilize third-party accounts such as turnkey asset management programs and separately managed accounts. They are also far more likely to pay out fees generated through assets on a different schedule than commission business, providing the opportunity for an increased payout in order to entice reps to utilize the corporate RIA for their fee business.

Another source of advantage for the high-profit broker-dealer is retention. Their overall median turnover rate is 10.5%, compared with 15.8% in other firms, and is superior at almost all production levels. While other firms on average lost five reps for every four new recruits, high-profit firms recruited almost the same amount of reps that they lost in 2010. The lower turnover for high-profit firms reduces total costs for transition assistance and onboarding. Additionally, better retention enables high-profit recruiters to be more focused on the quality of the representative recruited and be less concerned about the quantity of recruits, an approach which helps to perpetuate strong retention.

An aid for recruiting and retention alike, succession and practice management assistance seems to be a higher priority for high-profits than other firms. While other firms seem to be decreasing the succession education offered to reps, more high-profit firms offer it. High-profit firms are also more likely to offer a succession program to help match buyers and sellers. Additionally, they are more likely to offer transaction assistance to their reps, on both the sell side and the buy side. Even though high-profit firms and other firms have roughly the same amount of full-time staff members, the high-profit firms dedicate two full-time equivalents (FTE) to practice management compared with one in other firms. The additional employee may enable high-profit firms to dedicate more time assisting each rep, as they are supporting 265 reps per FTE, compared with 416 reps per FTE in other firms.

A final key observation concerning high-profit firms is their propensity to apply rep fees in order to better reflect cost of service. Although they are less likely to have a minimum production requirement for reps, they are much more likely to charge a low production fee for reps who are low producers. The typical implementation level for the fee is at \$40,000. Further, high-profit firms are far less likely to cover the full cost of many rep-related fees. Figure 10 provides an example of many services offered where the tendency to cover the full cost is vastly different between high-profit and non-high-profit firms. While offering these services is important for attracting reps, high-profit firms support their higher level of profitability by charging reps who actually want those particular services, rather than offering them for free to everyone.

**Figure 10: Propensity to Cover Various Service Costs**

| Service Item                   | Percentage of Firms Covering 100% of the Cost |             |
|--------------------------------|-----------------------------------------------|-------------|
|                                | High-Profit Firms                             | Other Firms |
| Compliance Fee                 | 16.7%                                         | 72.7%       |
| Overall Technology Fee         | 0.0%                                          | 40.0%       |
| Client Account Access          | 40.0%                                         | 60.0%       |
| Client Relationship Management | 16.7%                                         | 41.7%       |
| Data Mining                    | 0.0%                                          | 63.2%       |
| Help Desk                      | 50.0%                                         | 87.0%       |

**Representative Production and Compensation**

After a dramatic decrease in 2009, median revenue per rep increased sharply in 2010, rising 28% (Figure 11). Improving security markets and a rebounding economy helped to fuel this improvement. Other important contributing factors behind the rise, as will be discussed in the section ahead, include broker-dealer efforts to “prune” lower producers and rely on an increasingly concentrated, gradually aging but more experienced, base of reps.

**Figure 11: Median Revenue Per Representative, 2007–2010**

Similar to past years, production as measured by median revenue per rep in 2010 was much higher among independents relative to insurance broker-dealers—\$150,931 versus \$80,823. About 18% of independent reps are producing \$250,000 or more, compared with only 9% of insurance-affiliated representatives. Both of these percentages are improvements over last year. Insurance firms have also reduced their percentage of lowest producing reps, those with \$25,000 or less in annual production. Last year they comprised about 60% of the total reps in the broker-dealer; this year the lowest producers make up about 55% of all reps. For independent firms the smallest producers made up 31% of all reps in the firm, which was unchanged from last year.

**Figure 12: Distribution of Representatives by Production**

The typical representative payout among independent broker-dealers remained virtually unchanged since 2009, except for minor increases at the \$100,000 and \$250,000 levels, as demonstrated in Figure 13. In contrast, insurance-affiliated broker-dealers made substantial increases in payout at nearly every level. Insurance broker-dealers may be reacting to pressure to more effectively compete with the more superior payouts of independent firms. Although insurance payouts are still lower than independent broker-dealers at all levels, they have increased substantially over the last year, with the biggest increases found at the \$25,000 and \$100,000 levels (Figure 14).

**Figure 13: Median Representative Payout in Independent Firms, 2009–2010**

**Figure 14: Median Representative Payout in Insurance Firms, 2009–2010**

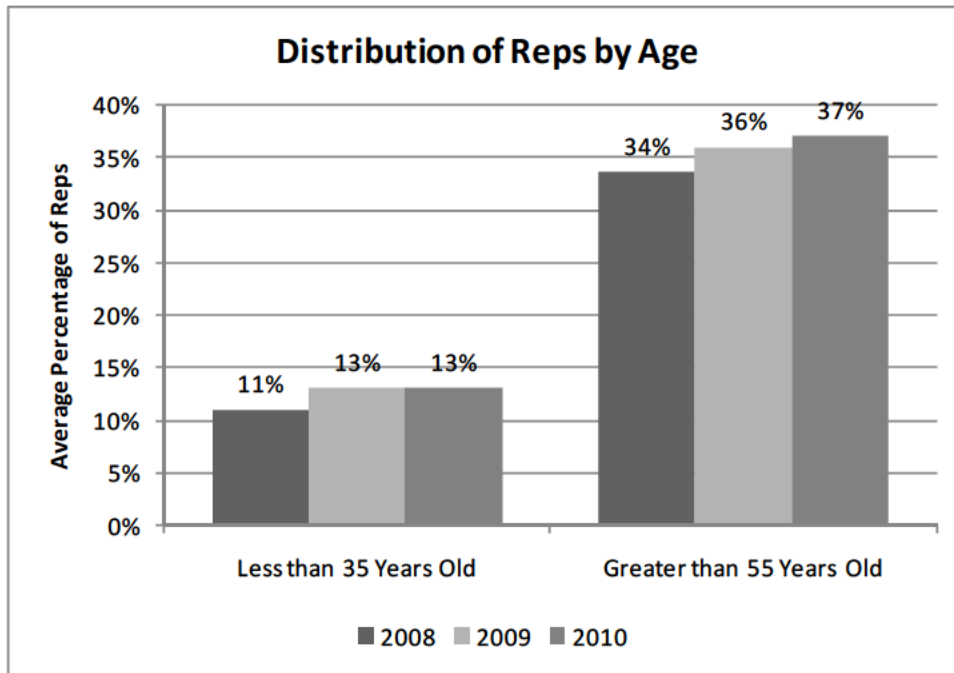

In addition to providing reps with higher payouts, independent firms are also more likely to offer additional services, such as account aggregation technology, to their reps and allow client access to consolidated statements. Further, independents are more likely to offer special services to their best representatives. The most common benefits offered by independent firms to their top-performing reps are specialized customer service and reduced pricing or fees. These benefits are also the most common offered by insurance firms, along with providing reps with various technology upgrades.

As noted in last year’s study, insurance-affiliated broker-dealers are more likely to cover 100% of the costs of many rep fees or services compared with independent broker-dealers. However, the gap in willingness to pay across firm types is narrowing and it appears that independent firms have stepped up their contribution coverage over the last year. Several fee types, such as help desk support, client relationship management software, and overall technology fees, are now more likely to be 100% covered by independent broker-dealers.

### Recruiting and Retention

For the past few years it has been all too clear that broker-dealers across the industry are facing a diminishing workforce of experienced representatives as reps continue to age and get closer to retirement while the percentage of younger representatives stagnates, as indicated in Figure 15.

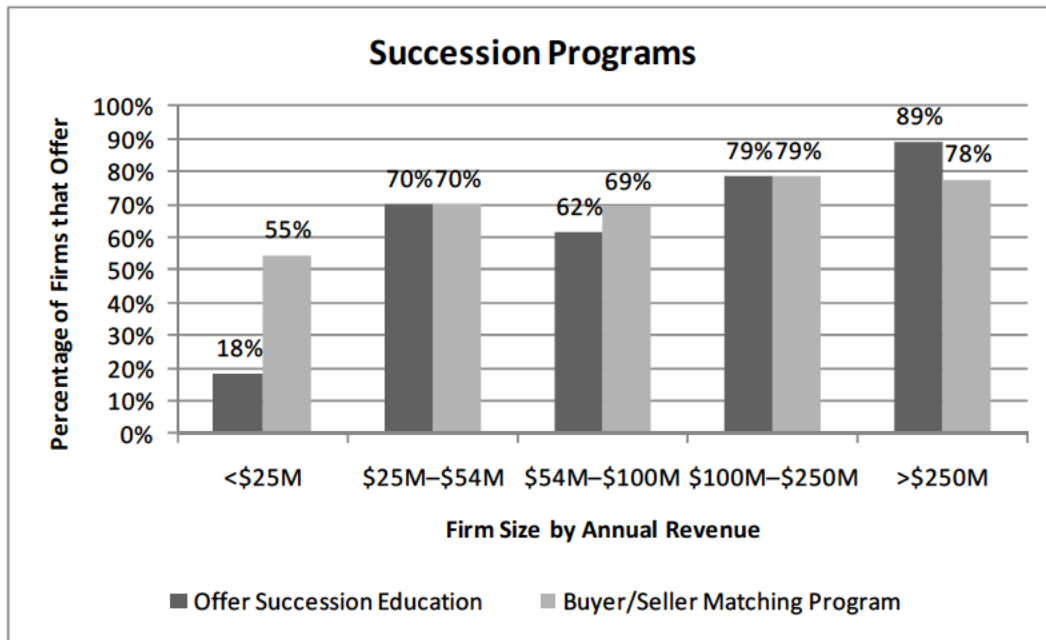

**Figure 15: Distribution of Youngest and Oldest Representatives, 2008–2010**

In the face of an aging rep base and a growing need to groom a younger generation of representatives in the industry, succession planning does not seem to be an area of importance for all firms. The percentage of firms offering succession education for representatives fell in 2010, from 70% to 63% of broker-dealers. The most common form of education is a conference presentation or breakout session dedicated to succession.

Very few firms indicated that they have a budget specific to succession-related programs. The budget for the few that do have one is small, with the average firm spending only about \$73,000 on programs in 2010. Their expected spending for 2011 is only marginally higher, at \$79,000. The propensity to offer succession programs increases in larger firms as shown in Figure 16; however, even the industry’s largest firms tend to have little or no money set aside for succession programs.

**Figure 16: Utilization of Succession Programs by Firm Size**

Succession education is much less common in insurance firms, as only 44% of firms offer them compared with 72% of independent firms. Insurance firms are also less likely to offer their representatives a buyer/seller matching program or transaction assistance, such as a recommended network of professional service providers or preferred pricing.

While emphasis on succession programs is minimal for most firms, total recruiting expenditures have increased about 18% for the typical firm since last year. A rise of recruiter costs and recruiting bonuses had the most impact on the increase in spending. About one-third of firms pay their new recruits a signing bonus and two-thirds offer a referral bonus to reps that refer new recruits. Most firms offer a variety of forms of transaction assistance to help newly recruited reps set up with their new broker-dealer, as shown in Figure 17.

**Figure 17: Most Common Transaction Assistance Offered to Newly Recruited Reps**

On average, firms recruited 13% more reps in 2010 than they had at the end of 2009. Yet, firms are still losing more reps than they are gaining. The ratio has not improved from last year—for every five reps recruited, another six on average were lost. Not surprisingly the majority of movement was among the lowest producers (Figure 18).

**Figure 18: Median Representatives Lost and Added by Level of Production**

The median turnover rate for all firms, 15%, was virtually unchanged from last year. The highest turnover rates were observed in the smallest and middle revenue categories, as demonstrated in Figure 19.

**Figure 19: Typical Representative Turnover by Firm Size**

It has been clear over the last few years that firms have become less reliant on other broker-dealers as a source of new recruits. While this is still the most common source of their new reps, firms estimated filling 62% of their positions in 2011 with reps from other broker-dealers, which is down from 68% in 2010. As reliance on other broker-dealers decreases, hiring individuals who are new to the industry or from RIA firms has become more prevalent (Figure 20).

**Figure 20: Expected Sources of New Hires, 2010 vs. 2011**

**Asset Management and Advisory Fees**

Over the last few years a clear trend has emerged of broker-dealers increasing the percentage of their revenue that is derived from asset management and advisory fees. As mentioned earlier, fee-related revenue continued to increase slightly in 2010. Similarly the group of 42 firms who participated in this year and last year’s studies also increased their percentage of revenue from fees by about 2 percentage points. Across all firms, the bulk of this revenue is from advisor-directed accounts, which makes up a little over half of the fees (Figure 21). This is unchanged from 2009.

**Figure 21: Composition of Asset Management and Advisory Fee Revenue**

The industry’s largest firms are also the most reliant on fee business, with 35.1% of their revenue derived from fees. In contrast, the smallest broker-dealers (less than \$25 million) derive only 15.5% of revenue from fees.

A similar distinction arises in the use of fee business for independent versus insurance broker-dealers. As shown in Figure 22, independent firms took in about 31% of their revenue through fees, compared with only 21% in insurance firms. The biggest difference between the two firm types is in advisor-directed accounts, which account for much more revenue in independent firms.

**Figure 22: Average Fees as a Percentage of Revenue in Independent and Insurance Broker-Dealers**

As in years past, independent firms are much more likely to allow reps to have their own RIA for financial planning and/or asset management. However, the practice of allowing an advisor-owned RIA has decreased since last year, even among independent firms (Figure 23). Further, few firms anticipate making a change to allow advisor-owned RIAs for financial planning or asset management in the next year.

**Figure 23: Independent Firms' Approach to Advisor-Owned RIAs, 2009 vs. 2010**

Despite the fact that fewer firms allow reps to have their own RIA, those that do appear to be successfully growing their assets under management. From 2009 to 2010 the typical AUM in a rep-owned RIA grew 51% while the typical AUM in corporate RIAs increased 27%.

**Figure 24: AUM in Corporate and Rep-Owned RIAs, 2008–2010**

## Compliance and Litigation

As industry regulations have increased over the last several years, compliance continues to be an important focus for all broker-dealers. Review of the 42 firms that participated in both this year and last year's studies indicates that the percentage of revenue firms spent on legal, litigation, and customer settlement fees is virtually unchanged this year. Further, the number of new complaints and total complaints at the end of the year is down for the typical repeat participant firm.

However, for those that do have complaints, they are more expensive than in the past. Repeat study participants typically spent about \$128,000 to defend complaints in 2009, compared with nearly \$250,000 in 2010. Similarly the total settlement dollars paid out by the typical firm has increased from \$141,000 in 2009 to \$183,000 in 2010.

The percentage of firms experiencing regulatory inquiries in 2010 was down from 47% to 39% among repeat participants. However, those that did have inquiries had more of them—the typical firm only had two in 2009 compared with 15 in 2010. The most common triggers of inquiries were related to variable annuity sales practices and investment advisor activities.

When reviewing the results of all this year's participants, it appears that the typical firm actually has one fewer full-time equivalent dedicated to compliance and licensing compared with last year. However among repeat participants, the numbers have actually increased by 2 FTEs, from 17 last year to 19 this year.

# Reader's Guide

## Report Organization

The *2011 FSI Broker-Dealer Financial Performance Study* reviews in detail the financial as well as operating practices of FSI broker-dealer members. Results are typically presented by size of firm, type of broker-dealer, and profitability. In addition to this reader's guide, this report has two other major sections:

- Results Analysis
- Detailed Data Tables

### ***2011 Results Analysis***

This summary offers a detailed review and interpretation of the survey findings, including a perspective on this year's trends as they relate to recent history.

### ***Detailed Data Tables***

Detailed data tables are presented at the back of this report. These financial and operating statistics begin on page 27. Survey results are provided based on all participating firms. Additionally, the data is typically broken out by firm profitability, size, and ownership type. Figures are provided for a total of up to nine sub-groups in all.

## Methodology

### ***Data Collection***

Survey data collected from 58 FSI broker-dealer member firms formed the basis for this study. Participation in the study was voluntary and restricted to members of FSI. The survey fielded in 2011, from February 11 to May 6, with firms reporting data as of year-end 2010.

All surveys were submitted directly to FA Insight. All firm-specific information provided is strictly confidential. No persons other than FA Insight project team members were, or will be, granted access to individual company data, other than a few general data points that firms gave permission to provide to FSI.

FSI study task force members, representatives from FSI, and FA Insight designed the survey form for this year's study.

### ***Data Compilation***

The data for each participant was reviewed separately following submission and all ratios were calculated for individual participants. While FA Insight did not verify the accuracy of the information submitted, respondents were frequently contacted to clear up any discrepancies noted in their submission.

A few participants provided their financial information in the firm's original chart of accounts rather than the one used in the survey form. To make statements comparable across

companies, FA Insight translated firms' existing charts of accounts to the survey form's chart of accounts, consulting with participants when clarification was needed.

In order to present on as much of the reported data as possible, compiled data was based on all responses regardless of whether a firm completed all parts of a question. When data groupings yielded fewer than three responses, however, no estimates were published. In these cases "N/A" is used in the data tables to indicate an insufficient sample size.

### ***Common-Sized Financial Statements***

Fifty-eight broker-dealers completed detailed income statement and balance sheet forms using 2010 financial data. To calculate the common-sized financial statements for all respondents, a simple average was used.

### ***Averages, Medians, and Quartiles***

The bulk of presented data in this report is composed of averages or medians. While averages are often the best representation for the industry or a group as a whole, medians tend to better represent the experience of the typical broker-dealer firm.

The median is the halfway point in a data group, where half the survey results have greater value and half have lesser value. Because extreme outliers in the sample have less influence, medians are more helpful than averages for depicting the typical value in a group of values.

If the group contains an odd number of values, the median is the value precisely in the middle when the values are ranked in order of magnitude. When the group has an even number of values, the median is defined as half the distance between the two values in the middle.

Median ratios are often a common source of confusion. Median revenue per rep, for example, is correctly calculated by first calculating revenue per rep for all the firms in the survey. Next, the median is derived from this group of firm ratios. While median revenue for all firms divided into median number of reps produces a benchmark ratio as well, this calculation cannot be considered a true median.

Quartiles are a natural extension of a median. An upper quartile is used to distinguish a group of high-profit firms in the results analysis and the detailed data tables. The upper-quartile dividing line is a value such that 75% of the values in the sample are below it. Similarly, the lower quartile begins with the value such that 75% of the values in the group are above it.

## **Reporting Groups**

In addition to presenting survey results for all participating broker-dealers, this report groups survey data according to firm profitability, size, and ownership. Estimates are provided for a total of nine sub-groups.

**Profitability**

Results for high-profit firms are distinguished from “all others” based on operating profit margin. High-profit firms are defined as any firm in the top 25% or upper quartile of respondents. For this year’s report, respondents with an operating profit margin of 4.5% or higher were designated high-profit. Firms with lower profitability made up the “all other” group.

**Firm Size**

Participants were grouped by size based on reported 2010 total annual revenue. Revenue categories are as follows: Less than \$25 million, \$25 million to \$54 million, \$54 million to \$100 million, \$100 million to \$250 million, and greater than \$250 million.

**Ownership**

This year a new methodology was utilized to form the “Insurance” and “Independent” groups. Last year, respondents were asked if they were owned by a parent company and, if so, if the parent was in the business of insurance. Those who said yes to both of those questions comprised the “Insurance” group of firms. The firms that were either not parent-owned or owned by a holding company or parent other than an insurance company were included in the “Independent” group.

In this year’s survey, participants were asked if they were owned by a parent and, if so, if the parent was in the business of insurance. If they answered yes to those questions, they were asked whether they primarily service agents of the parent insurance company, representatives not closely affiliated with the parent, or a hybrid of both types of representatives. If they answered that they primarily service agents of the parent or a hybrid of representative types, they were classified as “Insurance.” All other firms, including those that are not parent-owned, were classified as “Independent.”

Because of this change in methodology, last year’s results have been recalculated utilizing the new definitions. All historical data including “Insurance” and “Independent” comparisons in this report is based off the calculations resulting from the new methodology.

**Explanation of Financial Information**

**Liquidity**

Liquidity ratios measure a company’s ability to meet its short-term obligations.

**Current Ratio**

*Formula:*  

$$\frac{\text{Total Current Assets}}{\text{Total Current Liabilities}}$$

The current ratio shows a company’s ability to pay obligations due within 12 months with assets that are expected to turn to cash within 12 months. A higher current ratio indicates better liquidity, and a lower current ratio may indicate that the company will have difficulty meeting short-term obligations. The key factors that influence this ratio are accounts receivable, commissions, payables, and turnover.

**Working Capital**

*Formula:*

*Total Current Assets – Total  
Current Liabilities*

Working capital is the capital a company needs on a day-to-day basis to produce revenue. For a broker-dealer operation, the working capital typically consists of commissions receivable and securities held for resale less the commissions payable to the reps and the amounts payable to vendors. A high-dollar number for working capital may indicate either very good financial health (if the cash balance is high) or problems with managing the receivables (if the cash balance is low).

**Sales-to-Working  
Capital Ratio**

*Formula:*

*Total Revenue/Working  
Capital*

The sales-to-working capital ratio measures how much revenue a company produces for a dollar of working capital. The higher the ratio, the more effective the company is in managing its working capital.

---

**Safety**

Safety ratios measure a company's ability to withstand adversity.

**Debt-to-Equity**

*Formula:*

*Total Liabilities/Total  
Equity*

Debt-to-equity, also known as leverage or debt-to-net-worth, compares the amount of funds invested by creditors with the amount of funds invested by owners.

The higher the debt-to-equity ratio, the more the business is at risk in the event of an economic downturn. A heavy debt load increases a company's ability to grow during good times; however, a heavy debt load decreases a company's ability to withstand a downturn in profitability. The key factors that influence the debt-to-equity ratio are the company's borrowing, profitability, and capital (i.e., sources of funds other than debt).

|                                                                                                      |                                                                                                                                                       |
|------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Profitability</b>                                                                                 | Profitability ratios measure a company's profitability at various levels.                                                                             |
| <b>Gross Profit Margin %</b>                                                                         | The gross profit margin equals gross profit divided by revenue. It represents the percentage of each revenue dollar available for operating expenses. |
| <p><i>Formula:</i><br/> <i>(Gross Profit/<br/> Total Revenue) x 100</i></p>                          |                                                                                                                                                       |
| <b>Operating Profit Margin %</b>                                                                     | The operating profit margin is the percentage return on revenue after all operating expenses and before other income and expense.                     |
| <p><i>Formula:</i><br/> <i>(Operating Profit/<br/> Total Revenue) x 100</i></p>                      |                                                                                                                                                       |
| <b>Pre-Tax Profit Margin %</b>                                                                       | The pre-tax profit margin is the percentage profit on revenue after all expenses except income taxes.                                                 |
| <p><i>Formula:</i><br/> <i>(Pre-Tax Profit/<br/> Total Revenue) x 100</i></p>                        |                                                                                                                                                       |
| <b>Net Profit Margin %</b>                                                                           | The net profit margin is the percentage return on revenue after all expenses, including income taxes.                                                 |
| <p><i>Formula:</i><br/> <i>(Net Profit/<br/> Total Revenue) x 100</i></p>                            |                                                                                                                                                       |
| <b>Employee/Office Productivity</b>                                                                  | Employee productivity ratios measure a company's employees' productivity using different measures of efficiency.                                      |
| <b>Revenue per Employee (FTE)</b>                                                                    | The revenue per employee provides a measure of the productivity of employees.                                                                         |
| <p><i>Formula:</i><br/> <i>Total Revenue/<br/> Number of Full-time<br/> Equivalent Employees</i></p> |                                                                                                                                                       |
| <b>Commission per Rep</b>                                                                            | The commission per rep measures the productivity of the typical rep.                                                                                  |
| <p><i>Formula:</i><br/> <i>Total Commission<br/> Revenue/Number of Reps</i></p>                      |                                                                                                                                                       |

**Revenue per Rep**

*Formula:*  
*Total Revenue/*  
*Number of Reps*

The revenue per rep is another measure of productivity. Compared with commission per rep, revenue per rep also includes assets under management and other non-commissionable production.

**Commission Analysis**

Commission analysis looks at how many times a year commissions are paid, as well as by number of days and what the commission payout percentage is based on, financial statement values for commissions received, and commissions paid during the year.

**Commission Payable Turnover**

*Formula:*  
*Commissions Paid/*  
*Commissions Payable*

This is a modified version of accounts payable turnover using commissions paid and total commissions payable at the end of the year.

**Commission Payable—Days**

*Formula:*  
*365/(Commissions Paid/*  
*Commissions Payable)*

The median commission payable in days.

**Payout Ratio**

*Formula:*  
*Commissions Paid/*  
*Commissions Received*

The payout ratio is simply the ratio of commissions paid to commissions received based on financial statement data.

**Cash Flow Analysis**

Cash flow analysis looks at a broker-dealer's ability to generate operating cash flow from revenues and profits and the relationship of cash flow to assets and equity. Cash flow is a critical measure of a firm's ability to withstand an economic downturn, as well as measuring debt serviceability.

**Cash Conversion Efficiency**

*Formula:*  
*Operating Cash Flow/*  
*Total Revenue*

The cash conversion efficiency ratio measures the ability of revenue to generate operating cash flow. It indicates how much operating cash flow each dollar of revenue generates.

**Operating Cash Flow to Profit**

Operating cash flow to profit indicates how much operating cash flow each dollar of profit (net income) generates.

Formula:

$$\frac{\text{Operating Cash Flow}}{\text{Net Income}}$$

**Operating Cash Flow Return on Assets (ROA)**

Operating cash flow ROA measures the return on assets generated by operating cash flow.

Formula:

$$\frac{\text{Operating Cash Flow}}{\text{Total Assets}}$$

**Operating Cash Flow Return on Equity (ROE)**

Operating cash flow ROE measures the return on equity generated by operating cash flow.

Formula:

$$\frac{\text{Operating Cash Flow}}{\text{Total Equity}}$$

---

**Common-Sized Statements**

Common-sized financial statements express each account as a percentage of either revenue (for the income statement) or total assets (for the balance sheet). The common-sized statements allow for a consistent comparison between firms and different historic periods and establish a relationship between revenue and expenses or between the items on the balance sheet. The common-sized financial statements for broker-dealers were calculated by taking the average value for all accounts and expressing them as a percentage of the average total.

**Re: Fiduciary Data Request for Proposed Rule**

Dear Mr. Piacentini:

I am responding to your letter dated February 10, 2012, which I received on February 16, 2012. Since the Department released its proposal to re-define the term “Fiduciary” on October 21, 2010, the Financial Services Roundtable<sup>1</sup> and other industry participants have actively participated in the regulatory process, including filing comment letters, testifying at the Department’s March 2011 hearing, and attending meetings with the Department. As the Department prepares to re-propose its definition of “Fiduciary,” we believe the most effective process would be an iterative collaboration with the financial services industry, consumer groups, other financial regulators, and Congress. The Roundtable believes the Department should clearly and publicly identify the specific harms it seeks to redress, and narrowly tailor proposed changes to address those harms.

You initially requested our assistance with a collection of information request for up to ten years of *customer-specific* data on millions of individual investment accounts (including IRAs) in a letter dated December 15, 2011. You noted in your letter that this collection of information was being sought for the Department’s expanded regulatory impact analysis. We received the letter on December 21, 2011, and the deadline for our response was January 15, 2011.

Within hours of receiving your request to assist with the collection of information, I contacted your office on December 21st and eventually spoke to you directly about your request. I also sought an in-person meeting to clarify the Department’s collection of information request. As we have been throughout this rulemaking proceeding, the Roundtable was fully engaged and responded quickly.

---

<sup>1</sup> The Roundtable represents 100 of the largest integrated financial services companies providing banking, insurance, and investment products and services to the American consumer.

On January 24, 2012, you and your colleagues and Securities and Exchange Commission staff met with representatives of several financial services trade organizations. At that meeting, Roundtable staff informed you that the data identified in your December 15th letter is not currently collected in any form by the Roundtable. The Roundtable is a trade association consisting of member companies. The Roundtable has no customers or customer data. We do not collect or have access to the information you requested. As we stated during the meeting (and reiterated in a joint trade letter dated February 1, 2012), we are committed to communicating with our members regarding your collection of information request, and to researching additional sources of data that may help the Department with its data analysis.

More recently, your February 10th letter asked us to identify which data elements we can provide and when the Department can expect to receive them (our original response deadline of February 17th was extended to February 24th). In several ways, the data specified in the Department's collection of information request is not information that broker-dealers and investment advisers are required to record and maintain under the federal securities laws or regulations. First, broker-dealers and investment advisers generally do not make and keep some of the data requested by the Department, such as whether a specific recommendation was solicited or whether a customer followed the recommendation. Second, even in cases where our members make and keep the individual account-level data specified in the request (*e.g.*, Item 2), the data generally is not maintained in a format that easily lends itself to complying with the Department's collection of information request. Finally, neither broker-dealers nor investment advisers are required to make or maintain customer transaction information for ten years.

The effort to collect, compile, extract, and analyze the requested data across millions of individual client accounts held by our member companies is an extraordinarily expensive endeavor in terms of time and resources as well as costs. The complexity of this industry-wide collection of information request negatively impacts companies of all sizes and business models. An effort to collect this kind of information would drain valuable resources and dramatically reduce the time companies have to serve their clients.

Despite the enormous challenge the Department's collection of information request presents, we continue to seek out sources of information that you and your colleagues may find useful. Accordingly, we will supplement this letter with additional correspondence shortly. In the interim, it would be helpful if you could provide greater context concerning how the Department intends to use, distribute, and store the collection of information to ensure the financial privacy and confidentiality of the information. This customer-specific data is confidential information of these customers, and it is essential that it remain so. The Department, however, has not provided any assurance concerning the confidentiality of this information.

Advice encompasses information that makes customers aware of all options available to them, including (but not limited to) the importance of saving and planning for retirement. Because investment decisions take into account many more factors, a direct correlation between the advice given and the investment result would be tenuous. Therefore, we disagree with the Department's thesis that the quality of advice can be evaluated based solely on investment results.

In summary, as the Department moves forward in its efforts to collect information to prepare its expanded regulatory impact analysis, we respectfully request that the Department clearly identify the problem it seeks to rectify through further revisions to the definition of “Fiduciary.” The reasoning behind the current data request remains unclear. Next, as a trade association we do not have any customers or any ability to obtain confidential customer-specific data from our members. Furthermore, the implementation of an industry-wide collection of information involving millions of customer-specific data points would be extremely burdensome and costly, particularly without any clearly identified policy goal or benefit to investors.

Revisions to the definition of “Fiduciary” raise important policy issues. Therefore, we encourage the Department to develop any revised definition in a way that would address the specific concerns identified by the Department without eliminating customers’ ability to work with their preferred financial professional or to select from a broad range of retirement services and products provided by a variety of service providers.

If you have any additional questions, or need to contact the Roundtable in a timely fashion, please do not hesitate to contact Brian Tate on my staff at [REDACTED] [@fsround.org](mailto:[REDACTED]@fsround.org) or [REDACTED]. We look forward to continuing our constructive engagement with the Department on this important public policy issue.

Best Regards,

Steve Bartlett  
President and CEO

Joe,

We will not have our response to the Department completed by today, as I am still awaiting responses from some of our members. I walked through with our members each element of the request and what they might have and what format that might be in, before then trying to figure out what data might be kept in any common formats. We hope to be able to fully respond by the end of next week.

Lisa

Dear Joe,

I am writing on behalf of Cathy Weatherford, President and CEO of IRI, in regards to your letter dated February 10, 2012. Unfortunately, we only received your letter today. We are unable to formulate a formal response in time for your February 17 deadline. I am also aware that many of the other trades had not received their letters as of this morning. Please know that we want to do everything we can to assist your efforts on the fiduciary rule. We are working with our members and our sister trades to formulate a formal response to your request and we will be back to you as soon as possible. We apologize for the delay. Please do not hesitate to contact me if you have questions or if I can be of assistance. Thanks JL

February 10, 2012

Mr. Walter Welsh  
Executive Vice President, Taxes & Retirement Security  
American Council of Life Insurers  
101 Constitution Ave, NW  
Washington, D.C. 20001

Dear Mr. Welsh:

Thank you for attending the January 27, 2012, meeting with Department of Labor and Securities Exchange Commission staff regarding the Department's request for data related to the economic analysis for the re-proposal of its definition of fiduciary rule. At the meeting, you reported that your organization did not have all of the requested data. We answered your questions and clarified that the request was for any portion of the data requested. You stated that you would ascertain whether your organization would be able to provide any of the requested data and report back to us.

As the Department moves forward with its re-proposal, it is very important that we know which, if any, of the data elements enumerated in my December 15, 2011, letter you will be able to provide and when we can expect to receive these data. If you do not have any of these data, please inform us of any other data or data sources you are aware of that could help the Department evaluate the impact, if any, of conflicts of interest faced by brokers or others who advise IRA investors. I am hereby requesting your organization's response by February 17, 2012. Please send the response to:

Joseph S. Piacentini,  
Director, Office of Policy and Research  
Employee Benefits Security Administration  
U.S. Department of Labor, [REDACTED]  
200 Constitution Ave  
Washington, DC 20210  
Attention: Definition of Fiduciary RIA Data Request

If you prefer, you may email me directly at [REDACTED]@dol.gov. We appreciate your assistance in this matter.

Sincerely,

  
Joseph S. Piacentini  
Director, Office of Policy and Research

Washington, D.C. 20036

Dear Mr. Keegan:

Thank you for attending the January 27, 2012, meeting with Department of Labor and Securities Exchange Commission staff regarding the Department's request for data related to the economic analysis for the re-proposal of its definition of fiduciary rule. At the meeting, you reported that your organization did not have all of the requested data. We answered your questions and clarified that the request was for any portion of the data requested. You stated that you would ascertain whether your organization would be able to provide any of the requested data and report back to us.

As the Department moves forward with its re-proposal, it is very important that we know which, if any, of the data elements enumerated in my December 15, 2011, letter you will be able to provide and when we can expect to receive these data. If you do not have any of these data, please inform us of any other data or data sources you are aware of that could help the Department evaluate the impact, if any, of conflicts of interest faced by brokers or others who advise IRA investors. I am hereby requesting your organization's response by February 17, 2012. Please send the response to:

Ms. Cathy Weatherford  
Executive Vice President  
Insured Retirement Institute  
1101 New York Avenue, NW  
[REDACTED]  
Washington, DC 20005

Dear Ms. Weatherford:

Thank you for attending the January 27, 2012, meeting with Department of Labor and Securities Exchange Commission staff regarding the Department's request for data related to the economic analysis for the re-proposal of its definition of fiduciary rule. At the meeting, you reported that your organization did not have all of the requested data. We answered your questions and clarified that the request was for any portion of the data requested. You stated that you would ascertain whether your organization would be able to provide any of the requested data and report back to us.

As the Department moves forward with its re-proposal, it is very important that we know which, if any, of the data elements enumerated in my December 15, 2011, letter you will be able to provide and when we can expect to receive these data. If you do not have any of these data, please inform us of any other data or data sources you are aware of that could help the Department evaluate the impact, if any, of conflicts of interest faced by brokers or others who advise IRA investors. I am hereby requesting your organization's response by February 17, 2012. Please send the response to:

**Date:** Friday, April 04, 2014 11:53:49 AM

---

Thanks for meeting with us yesterday. As we discussed, we would like to meet with you in a smaller group setting to see what we can achieve. As an initial matter, it would be especially helpful to work with you on the "global" exemption. I would think that we should start by focusing on establishing parameters for the policy and procedures condition that both reduce the dangers posed by conflicts of interest and that are workable. But we would also appreciate detailed discussions about the disclosure provisions, the audit requirement, and any other aspect of the exemption or alternative approaches that you'd care to discuss. We'll be happy to come to you, and we'll move schedules around to meet with you for as long and for as many meetings as you can stand. Please just let me know what works for you.

Thanks again for what I thought was a very constructive meeting and for your willingness to work with us on this challenging project.

Tim

Tim,

Sorry for the delay in getting back to you – as you know, scheduling things can be a little tricky. Following up from last week's discussion, we agree that a small-group discussion of options for how a workable exemption could be crafted (as opposed to a specific drafting session) could be helpful. Having just looked at my schedule and David's, I think that the following dates/times would work for a small-group follow-up. We would need to check a couple of other people's schedules before

confirming, but let us know if any of these dates/times work:

- Wednesday, 4/9, 12:00-1:00
- Thursday, 4/10, any time between 12:00 and 3:00
- Friday, 4/11, 10:00-11:00 or 12:00-1:00

Thanks,

Jennifer

It looks like 1-3 Thursday works best for us. There's a training program that's creating a problem for some of our folks on Wednesday (although not for me, if you'd like a bonus meeting with just me!)

Please just let me know if Thursday still works and where we need to go, and we'll be there.

Thanks,

Tim

Tim,

Sorry for the delay in getting back to you – as you know, scheduling things can be a little tricky. Following up from last week's discussion, we agree that a small-group discussion of options for how a workable exemption could be crafted (as opposed to a specific drafting session) could be helpful. Having just looked at my schedule and David's, I think that the following dates/times would work for a small-group follow-up. We would need to check a couple of other people's schedules before confirming, but let us know if any of these dates/times work:

- Wednesday, 4/9, 12:00-1:00
- Thursday, 4/10, any time between 12:00 and 3:00
- Friday, 4/11, 10:00-11:00 or 12:00-1:00

Thanks,

Jennifer

Thanks for meeting with us yesterday. As we discussed, we would like to meet with you in a smaller group setting to see what we can achieve. As an initial matter, it would be especially helpful to work with you on the "global" exemption. I would think that we should start by focusing on establishing parameters for the policy and procedures condition that both reduce the dangers posed by conflicts of interest and that are workable. But we would also appreciate detailed discussions about the disclosure provisions, the audit requirement, and any other aspect of the exemption or alternative approaches that you'd care to discuss. We'll be happy to come to you, and we'll move schedules around to meet with you for as long and for as many meetings as you can stand. Please just let me know what works for you.

Thanks again for what I thought was a very constructive meeting and for your willingness to work with us on this challenging project.

Thanks. I thought I'd send an outline over today that sketches out a revised approach to the policies and procedures based on our discussions earlier in the week, and also try to flag some other issues for discussion. My staff has given me revised exemption text that I thought I'd try to work through over the weekend as well. It might make more sense to meet early next week if your staff is available. Of course, I'm happy to come over today, but it might make more sense to circulate some additional paper first. Are there dates next week that work?

**Cc:** Hauser, Timothy - EBSA  
**Subject:** DOL's Fiduciary Project

Thanks for meeting with us yesterday. As we discussed, we would like to meet with you in a smaller group setting to see what we can achieve. As an initial matter, it would be especially helpful to work with you on the "global" exemption. I would think that we should start by focusing on establishing parameters for the policy and procedures condition that both reduce the dangers posed by conflicts of interest and that are workable. But we would also appreciate detailed discussions about the disclosure provisions, the audit requirement, and any other aspect of the exemption or alternative approaches that you'd care to discuss. We'll be happy to come to you, and we'll move schedules around to meet with you for as long and for as many meetings as you can stand. Please just let me know what works for you.

Thanks again for what I thought was a very constructive meeting and for your willingness to work with us on this challenging project.

Tim

**Subject:** RE: DOL's Fiduciary Project

Tim,

Sorry for the delay in getting back to you – as you know, scheduling things can be a little tricky. Following up from last week's discussion, we agree that a small-group discussion of options for how a workable exemption could be crafted (as opposed to a specific drafting session) could be helpful. Having just looked at my schedule and David's, I think that the following dates/times would work for a small-group follow-up. We would need to check a couple of other people's schedules before confirming, but let us know if any of these dates/times work:

- Wednesday, 4/9, 12:00-1:00
- Thursday, 4/10, any time between 12:00 and 3:00
- Friday, 4/11, 10:00-11:00 or 12:00-1:00

Thanks,

Jennifer

Thanks. I thought I'd send an outline over today that sketches out a revised approach to the policies and procedures based on our discussions earlier in the week, and also try to flag some other issues for discussion. My staff has given me revised exemption text that I thought I'd try to work through over the weekend as well. It might make more sense to meet early next week if your staff is available. Of course, I'm happy to come over today, but it might make more sense to circulate some additional paper first. Are there dates next week that work?

Tim,

Sorry for the delay in getting back to you – as you know, scheduling things can be a little tricky. Following up from last week's discussion, we agree that a small-group discussion of options for how a workable exemption could be crafted (as opposed to a specific drafting session) could be helpful. Having just looked at my schedule and David's, I think that the following dates/times would work for a small-group follow-up. We would need to check a couple of other people's schedules before confirming, but let us know if any of these dates/times work:

- Wednesday, 4/9, 12:00-1:00
- Thursday, 4/10, any time between 12:00 and 3:00
- Friday, 4/11, 10:00-11:00 or 12:00-1:00

Thanks,

Jennifer

**Cc:** Hauser, Timothy - EBSA  
**Subject:** DOL's Fiduciary Project

Thanks for meeting with us yesterday. As we discussed, we would like to meet with you in a smaller group setting to see what we can achieve. As an initial matter, it would be especially helpful to work with you on the "global" exemption. I would think that we should start by focusing on establishing parameters for the policy and procedures condition that both reduce the dangers posed by conflicts of interest and that are workable. But we would also appreciate detailed discussions about the disclosure provisions, the audit requirement, and any other aspect of the exemption or alternative approaches that you'd care to discuss. We'll be happy to come to you, and we'll move schedules around to meet with you for as long and for as many meetings as you can stand. Please just let me know what works for you.

Thanks again for what I thought was a very constructive meeting and for your willingness to work with us on this challenging project.

**Subject:** RE: DOL's Fiduciary Project

Tim,

Sorry for the delay in getting back to you – as you know, scheduling things can be a little tricky. Following up from last week's discussion, we agree that a small-group discussion of options for how

a workable exemption could be crafted (as opposed to a specific drafting session) could be helpful. Having just looked at my schedule and David's, I think that the following dates/times would work for a small-group follow-up. We would need to check a couple of other people's schedules before confirming, but let us know if any of these dates/times work:

- Wednesday, 4/9, 12:00-1:00
- Thursday, 4/10, any time between 12:00 and 3:00
- Friday, 4/11, 10:00-11:00 or 12:00-1:00

Thanks,

Jennifer

**Cc:** Hauser, Timothy - EBSA  
**Subject:** DOL's Fiduciary Project

Thanks for meeting with us yesterday. As we discussed, we would like to meet with you in a smaller group setting to see what we can achieve. As an initial matter, it would be especially helpful to work with you on the "global" exemption. I would think that we should start by focusing on establishing parameters for the policy and procedures condition that both reduce the dangers posed by conflicts of interest and that are workable. But we would also appreciate detailed discussions about the

disclosure provisions, the audit requirement, and any other aspect of the exemption or alternative approaches that you'd care to discuss. We'll be happy to come to you, and we'll move schedules around to meet with you for as long and for as many meetings as you can stand. Please just let me know what works for you.

Thanks again for what I thought was a very constructive meeting and for your willingness to work with us on this challenging project.

Tim

**Subject:** RE: DOL's Fiduciary Project

Tim,

Sorry for the delay in getting back to you – as you know, scheduling things can be a little tricky. Following up from last week's discussion, we agree that a small-group discussion of options for how a workable exemption could be crafted (as opposed to a specific drafting session) could be helpful. Having just looked at my schedule and David's, I think that the following dates/times would work for a small-group follow-up. We would need to check a couple of other people's schedules before confirming, but let us know if any of these dates/times work:

- Wednesday, 4/9, 12:00-1:00
- Thursday, 4/10, any time between 12:00 and 3:00
- Friday, 4/11, 10:00-11:00 or 12:00-1:00

Thanks,

Jennifer

**Cc:** Hauser, Timothy - EBSA  
**Subject:** DOL's Fiduciary Project

Thanks for meeting with us yesterday. As we discussed, we would like to meet with you in a smaller group setting to see what we can achieve. As an initial matter, it would be especially helpful to work with you on the "global" exemption. I would think that we should start by focusing on establishing parameters for the policy and procedures condition that both reduce the dangers posed by conflicts of interest and that are workable. But we would also appreciate detailed discussions about the disclosure provisions, the audit requirement, and any other aspect of the exemption or alternative approaches that you'd care to discuss. We'll be happy to come to you, and we'll move schedules around to meet with you for as long and for as many meetings as you can stand. Please just let me know what works for you.

Thanks again for what I thought was a very constructive meeting and for your willingness to work with us on this challenging project.

Tim

We hate to do this, but when David checked with Lourdes (who we think would be key to including in this small group discussion), we realized that Lourdes will be out of the office on Thursday. Is there any chance that Wednesday or Friday could work on your end?

**Cc:** Blass, D.W. (David); Hauser, Timothy - EBSA  
**Subject:** RE: DOL's Fiduciary Project

It looks like 1-3 Thursday works best for us. There's a training program that's creating a problem for some of our folks on Wednesday (although not for me, if you'd like a bonus meeting with just me!)

Please just let me know if Thursday still works and where we need to go, and we'll be there.

Thanks,

Tim

**Subject:** RE: DOL's Fiduciary Project

Tim,

Sorry for the delay in getting back to you – as you know, scheduling things can be a little tricky. Following up from last week's discussion, we agree that a small-group discussion of options for how a workable exemption could be crafted (as opposed to a specific drafting session) could be helpful. Having just looked at my schedule and David's, I think that the following dates/times would work for a small-group follow-up. We would need to check a couple of other people's schedules before confirming, but let us know if any of these dates/times work:

- Wednesday, 4/9, 12:00-1:00
- Thursday, 4/10, any time between 12:00 and 3:00
- Friday, 4/11, 10:00-11:00 or 12:00-1:00

Thanks,

Jennifer

**Cc:** Hauser, Timothy - EBSA  
**Subject:** DOL's Fiduciary Project

Thanks for meeting with us yesterday. As we discussed, we would like to meet with you in a smaller group setting to see what we can achieve. As an initial matter, it would be especially helpful to work with you on the "global" exemption. I would think that we should start by focusing on establishing parameters for the policy and procedures condition that both reduce the dangers posed by conflicts of interest and that are workable. But we would also appreciate detailed discussions about the disclosure provisions, the audit requirement, and any other aspect of the exemption or alternative approaches that you'd care to discuss. We'll be happy to come to you, and we'll move schedules around to meet with you for as long and for as many meetings as you can stand. Please just let me know what works for you.

Thanks again for what I thought was a very constructive meeting and for your willingness to work with us on this challenging project.

Tim

It looks like 1-3 Thursday works best for us. There's a training program that's creating a problem for some of our folks on Wednesday (although not for me, if you'd like a bonus meeting with just me!)

Please just let me know if Thursday still works and where we need to go, and we'll be there.

Thanks,

Tim

**Subject:** RE: DOL's Fiduciary Project

Tim,

Sorry for the delay in getting back to you – as you know, scheduling things can be a little tricky. Following up from last week's discussion, we agree that a small-group discussion of options for how a workable exemption could be crafted (as opposed to a specific drafting session) could be helpful. Having just looked at my schedule and David's, I think that the following dates/times would work for a small-group follow-up. We would need to check a couple of other people's schedules before confirming, but let us know if any of these dates/times work:

- Wednesday, 4/9, 12:00-1:00
- Thursday, 4/10, any time between 12:00 and 3:00
- Friday, 4/11, 10:00-11:00 or 12:00-1:00

Thanks,

Jennifer

**Cc:** Hauser, Timothy - EBSA  
**Subject:** DOL's Fiduciary Project

Thanks for meeting with us yesterday. As we discussed, we would like to meet with you in a smaller group setting to see what we can achieve. As an initial matter, it would be especially helpful to work with you on the "global" exemption. I would think that we should start by focusing on establishing parameters for the policy and procedures condition that both reduce the dangers posed by conflicts of interest and that are workable. But we would also appreciate detailed discussions about the disclosure provisions, the audit requirement, and any other aspect of the exemption or alternative approaches that you'd care to discuss. We'll be happy to come to you, and we'll move schedules around to meet with you for as long and for as many meetings as you can stand. Please just let me know what works for you.

Thanks again for what I thought was a very constructive meeting and for your willingness to work with us on this challenging project.

Hi Matt,

I know that SEC, like DOL, has interest in rollovers. So I thought you might find this interesting (See attached). Sometimes I think salespeople are out in front of behavioral economists – in understanding and exploiting how people make decisions, or even influencing how they make decisions.

Best,  
Joe P.
