Hey Matt,

I'd like to have you present on Thursday, October 17<sup>th</sup> from 11 am to 12 noon. Does that work for you? The afternoon of the 17<sup>th</sup> is also pretty wide open, and Friday the 18<sup>th</sup> is a possibility, too.

Thanks,  
Keith

Hey Matt,

I wasn't at the FSI meeting (that was the one on the Friday, right?). But I'm guessing that the same people led that meeting as the other one on the Tuesday. They were Joe Piacentini, Tim Hauser, and Adriana Kugler.

Joe is the head of my office (Office of Policy and Research) and the chief economist of EBSA.

Adriana is the chief economist of DOL.

Tim Hauser is the Associate Solicitor for PBSB (Plan Benefits Security Division) of the Solicitor's Office. PBSB is not housed within EBSA, but they are our practicing lawyers, so Tim is the top lawyer on the project.

Joe and Tim are both tall, but I think Tim is probably a little taller than Joe. Hope that helps.

Keith

**Subject:** quick question...

Who are the primary lawyers on the fiduciary rule?

I know Chris Cosby.

There were three people basically running the FSI meeting I attended with Jennifer. Do you happen to know what their names were?

Tall guy (Joseph Piacentini?), lawyer guy, and I think Adriana.

Thanks

Matt

Joe and George,

Unfortunately, I just learned that I will probably have to be out of the office on Friday. Can we schedule the disclosures call for next week? Here are the times that work for our team:

Tues. (9/23) 9-10  
Wed. (9/24) 9-12:30; 4-5  
Thurs. (9/25) 9-10; 11-5  
Fri. (9/26) 10-1; 3:30-5

Thanks,  
Jen

**Importance:** High

Thanks, Jen. I think it would be terrific if we could get another discussion of point of sale disclosures done this week and include the Treasury folks. Then, we could move on to the other topics next week when I’m back.

I’ve asked the head of our Office of Regulations and Interpretations, Joe Canary, to work with you on getting this set up. More generally, he’s always a good person to talk to on this project! Joe’s number is [REDACTED].

**To:** Hauser, Timothy - EBSA  
**Subject:** Calls to discuss fiduciary duty exemption

Tim,

My apologies for the delay getting back to you with proposed times to discuss point of sale disclosures, the low-fee safe harbor, and the general exemption outline. Since you are out of the office for the next several days, maybe we should try to schedule the point of sale disclosure discussion with DOL/Treasury staff first. I list below the days and times this week when our staff is available. Please let me know if there is someone else I should contact about scheduling this call while you are gone.

Thurs. (9/18) 11:30-12:30; 2-3:30

Fri. (9/19) 12-3

For the other two topics, the team is available the following days and times next week. Please let me know what works for all of you.

Tues. (9/23) 9-10

Wed. (9/24) 9-12:30; 4-5

Thurs. (9/25) 9-10; 11-5

Fri. (9/26) 10-1; 3:30-5

Thanks,

**Jen Porter**

---

Hi, Jen. We would like to continue the discussion of "point of sale" disclosure this week. Thursday is not good, but Friday (9/19) between 12-3 is open for me. I am copying Treasury folks and others here in EBSA to see who wants to participate in the call and who is available on Friday. Thanks.

---

**From:** Hauser, Timothy - EBSA  
**Sent:** Tuesday, September 16, 2014 4:39 PM  
**To:** Porter, Jennifer R.  
**Cc:** Hauser, Timothy - EBSA; Canary, Joe - EBSA  
**Subject:** RE: Calls to discuss fiduciary duty exemption  
**Importance:** High

Thanks, Jen. I think it would be terrific if we could get another discussion of point of sale disclosures done this week and include the Treasury folks. Then, we could move on to the other topics next week when I'm back.

I've asked the head of our Office of Regulations and Interpretations, Joe Canary, to work with you on getting this set up. More generally, he's always a good person to talk to on this project! Joe's number is [REDACTED].

**Sent:** Tuesday, September 16, 2014 3:31 PM  
**To:** Hauser, Timothy - EBSA  
**Subject:** Calls to discuss fiduciary duty exemption

Tim,

My apologies for the delay getting back to you with proposed times to discuss point of sale disclosures, the low-fee safe harbor, and the general exemption outline. Since you are out of the office for the next several days, maybe we should try to schedule the point of sale disclosure discussion with DOL/Treasury staff first. I list below the days and times this week when our staff is available. Please let me know if there is someone else I should contact about scheduling this call while you are gone.

Thurs. (9/18) 11:30-12:30; 2-3:30  
Fri. (9/19) 12-3

For the other two topics, the team is available the following days and times next week. Please let

me know what works for all of you.

Tues. (9/23) 9-10

Wed. (9/24) 9-12:30; 4-5

Thurs. (9/25) 9-10; 11-5

Fri. (9/26) 10-1; 3:30-5

Thanks,

**Jen Porter**

**Date:** Wednesday, September 17, 2014 5:29:00 PM

---

FYI: See below. This Friday no longer works for the SEC. George Bostick said he and Mark Iwry are available Friday, 9/26 at 11:45am. That works for me too. Absent objection, I want to firm up with Jen next Friday, 11:45am to 12:45pm. Please let me know if you plan to participate. Thanks.

**Subject:** RE: Calls to discuss fiduciary duty exemption

Joe and George,

Unfortunately, I just learned that I will probably have to be out of the office on Friday. Can we schedule the disclosures call for next week? Here are the times that work for our team:

Tues. (9/23) 9-10  
Wed. (9/24) 9-12:30; 4-5  
Thurs. (9/25) 9-10; 11-5  
Fri. (9/26) 10-1; 3:30-5

Thanks,  
Jen

Thanks, Jen. I think it would be terrific if we could get another discussion of point of sale disclosures done this week and include the Treasury folks. Then, we could move on to the other topics next week when I’m back.

I’ve asked the head of our Office of Regulations and Interpretations, Joe Canary, to work with you on getting this set up. More generally, he’s always a good person to talk to on this project! Joe’s number is [redacted].

**To:** Hauser, Timothy - EBSA  
**Subject:** Calls to discuss fiduciary duty exemption

Tim,

My apologies for the delay getting back to you with proposed times to discuss point of sale disclosures, the low-fee safe harbor, and the general exemption outline. Since you are out of the office for the next several days, maybe we should try to schedule the point of sale disclosure discussion with DOL/Treasury staff first. I list below the days and times this week when our staff is available. Please let me know if there is someone else I should contact about scheduling this call while you are gone.

Thurs. (9/18) 11:30-12:30; 2-3:30

Fri. (9/19) 12-3

For the other two topics, the team is available the following days and times next week. Please let me know what works for all of you.

Tues. (9/23) 9-10

Wed. (9/24) 9-12:30; 4-5

Thurs. (9/25) 9-10; 11-5

Fri. (9/26) 10-1; 3:30-5

Thanks,

**Jen Porter**

**Importance:** High

Thanks, Jen. I think it would be terrific if we could get another discussion of point of sale disclosures done this week and include the Treasury folks. Then, we could move on to the other topics next week when I’m back.

I’ve asked the head of our Office of Regulations and Interpretations, Joe Canary, to work with you on getting this set up. More generally, he’s always a good person to talk to on this project! Joe’s number is [REDACTED].

**Subject:** Calls to discuss fiduciary duty exemption

Tim,

My apologies for the delay getting back to you with proposed times to discuss point of sale disclosures, the low-fee safe harbor, and the general exemption outline. Since you are out of the office for the next several days, maybe we should try to schedule the point of sale disclosure discussion with DOL/Treasury staff first. I list below the days and times this week when our staff is available. Please let me know if there is someone else I should contact about scheduling this call while you are gone.

Thurs. (9/18) 11:30-12:30; 2-3:30

Fri. (9/19) 12-3

For the other two topics, the team is available the following days and times next week. Please let me know what works for all of you.

Tues. (9/23) 9-10

Wed. (9/24) 9-12:30; 4-5

Thurs. (9/25) 9-10; 11-5

Fri. (9/26) 10-1; 3:30-5

Thanks,

**Jen Porter**

Chris,

Sorry for my late response, but I've been away on adoption leave.

I checked on the economic guidance document, and it turns out it is not public yet. There was only a discussion held with reporters, but no release yet. As soon as it becomes public, I will send you the link.

Best,

Jennifer

Joe,

I got your phone call. No worries there – I had already told the members of our working group who will be on the call that we want to hear as much as possible from the academics. We defer to your lead on the questions, and won't be overly talkative.

Thanks again for letting us participate!

Jennifer

Hi Jennifer:

We are on for Tuesday @ 3. Will you be establishing a call-in number?

Thanks and look forward to speaking with you and your team then!

Best,

Chris

Hi, Chris. I have a group ready to discuss our request for comment with you next week. Our calendars are open between 3:00 and 5:00 on Tuesday, 1/31, and between 2:00 and 4:00 on Wednesday, 2/1. Can you find a 30-minute slot in one of those windows that works for your group?

Thanks,

Jennifer

Dear Chris,

I apologize for not getting back to you earlier. Can we try to set up something next week? I have not been able to get through the comment letters sufficiently enough to be able to discuss them with you.

The most of what I have seen regarding information through the primary industry groups comments is in the form of survey responses.

Chris,

Sorry for my late response, but I've been away on adoption leave.

I checked on the economic guidance document, and it turns out it is not public yet. There was only a discussion held with reporters, but no release yet. As soon as it becomes public, I will send you the link.

Best,

Jennifer

Dear Chris,

Unfortunately I have not been able to get through all of the comment letters as of yet, but there are a few that do provide some form of quantitative information. These include

Financial Planning Coalition

<http://www.sec.gov/comments/4-606/4606-3126.pdf>

Charles Schwab

<http://www.sec.gov/comments/4-606/4606-3137.pdf>

sifma (including info on IRA accounts)

<http://www.sec.gov/comments/4-606/4606-3128.pdf>

Financial Services Institute

<http://www.sec.gov/comments/4-606/4606-3138.pdf>

State Farm Investment Management Corp

<http://www.sec.gov/comments/4-606/4606-3104.pdf>

Also, the letter from the Consumer Federation of America is worth a read.

<http://www.sec.gov/comments/4-606/4606-3119.pdf>

Lastly, the attached paper came across my desk recently. I am sure you are probably already aware of it but just in case you are not...

To my knowledge we have not received any kind of dataset with account level or other granular information. I will let you know if I come across any other interesting/applicable comment letters. Please ask if you have any questions.

Hi, everyone. I would like to coordinate a meeting for you to meet with our fiduciary working group here at the SEC. Together we can discuss some of the industry comments you've received about potential changes to a BD business model. We have a normal working group meeting at 10:00 on Tuesdays. If this time and day works for you, could you suggest two future dates that would accommodate your schedules? I will then check schedules here and confirm with you.

Thanks,

Jennifer

**Subject:** meeting with the SEC

Hi, everyone. I would like to coordinate a meeting for you to meet with our fiduciary working group here at the SEC. Together we can discuss some of the industry comments you've received about potential changes to a BD business model. We have a normal working group meeting at 10:00 on Tuesdays. If this time and day works for you, could you suggest two future dates that would accommodate your schedules? I will then check schedules here and confirm with you.

Thanks,

Jennifer

**Jennifer Marietta-Westberg, PhD**

Chris,

We are able to schedule for Nov. 8<sup>th</sup>. Please arrive at the SEC (100 F St. NE) between 9:30 and 9:45 so you can complete the security check-in process. It takes a bit of time to have your photo taken, etc. You can supply Matt Kozora's name at the front desk when you arrive.

Could you provide a few bullet points outlining your questions that I can circulate to the working group ahead of the meeting?

Thanks,

Jennifer

Thanks. On our end, I expect that Bill Taylor and I will attend from the Solicitor's Office; Lou Campagna and Fred Wong from EBSA's Office of Regulations and Interpretations; Lyssa Hall and Karen Lloyd from EBSA's Office of Exemptions and Determinations; and Chris Cosby (and possibly one other person) from EBSA's Office of Policy and Research.

Chris, do you expect anybody else to attend from your office? If so, could you send a note to Brian and cc me?

Tim

Good morning:

I am glad that you accepted (or tentatively accepted) my invitation to attend Professor Laby's fiduciary presentation tomorrow here at DOL. It would be great if you can attend in person, but we have a call-in number available as well. Please respond to this email as soon as possible indicating whether you will be attending in person or calling in. I am tracking attendance to make sure the room will be large enough to accommodate everyone, and I am going to try to email the PowerPoint presentation to those the will be calling in. I will send out a follow-up email with our address and security clearance instructions for those of you who will be coming over.

Thanks and I look forward to seeing you tomorrow!

Chris

Good evening:

Thanks for responding to my email earlier today. For those of you joining us in-person for tomorrow's presentation, please come to the DOL visitor's entrance at 3rd and C and ask security to call Brian Buyniski at [REDACTED]. He will escort you to the 5th floor conference room.

For those of you participating by phone, I have attached Professor Laby's presentation.

Please forward this message to any of you colleagues that I did not include on the email.

Best,

Chris

**Subject:** RE: SEC RIABD Request

Hi Matt:

Great talking to you on the phone today, and thanks again for the heads up. In follow-up to our call, I am wondering you and Jennifer available to discuss the release with Joe and me on Monday at 10:30 or 4? We would like to talk before we attend a meeting on Tuesday morning where this may come up.

Thanks,

Chris

Ammani,

Thx again for your help in arranging this meeting. As a follow-up, you wanted the names of other EBSA staff we plan to bring to the meeting. Our preference was to keep this first meeting small, so we decided not to bring lots of people. Consequently, in addition to Phyllis and myself, we will only bring our lead ERISA attorney, Tim Hauser, who can speak to some of the mutual interactions we have had with SEC staff over the years. Finally, one of the topics we hope to discuss with Chairman Schapiro is our current Memorandum of Understanding with the SEC which was signed back in 2008. It expires in 2013. I have attached a copy of it for your review and so that you can share it with interested staff there. We would like to discuss a renewal of the MOU and potential ways in which it could serve to benefit several of our mutual activities. If you have any questions, please do not hesitate to call. All the best.

**Subject:** Calls to discuss fiduciary duty exemption  
**Date:** Tuesday, September 16, 2014 3:31:21 PM

---

Tim,

My apologies for the delay getting back to you with proposed times to discuss point of sale disclosures, the low-fee safe harbor, and the general exemption outline. Since you are out of the office for the next several days, maybe we should try to schedule the point of sale disclosure discussion with DOL/Treasury staff first. I list below the days and times this week when our staff is available. Please let me know if there is someone else I should contact about scheduling this call while you are gone.

Thurs. (9/18) 11:30-12:30; 2-3:30

Fri. (9/19) 12-3

For the other two topics, the team is available the following days and times next week. Please let me know what works for all of you.

Tues. (9/23) 9-10

Wed. (9/24) 9-12:30; 4-5

Thurs. (9/25) 9-10; 11-5

Fri. (9/26) 10-1; 3:30-5

Thanks,

**Jen Porter**  
Chair's Office

**Subject:** Disclosure and Audit Requirements  
**Date:** Tuesday, August 26, 2014 4:59:30 PM

---

Tim,

I enjoyed our meeting earlier today. It was great to put faces to names. I would like to schedule a call to discuss the disclosure and audit requirements under the federal securities laws. Due to vacation schedules this week, it looks like sometime next week is our best bet with everyone on the team. Are you free at any of the following times?

Tuesday Sept. 2 at 3 - 5

Wednesday Sept. 3 at 1:30

Thursday Sept. 4 at 4-5

Also, following our conversation today, please let me know if it would be helpful for our economists to talk again about data and the economic analysis. I will be happy to set something up.

Thanks,

**Jen Porter**  
Chair's Office

**Subject:** Follow-up from our meeting this week  
**Date:** Friday, June 08, 2012 3:21:52 PM

---

Jennifer,

It was great to meet with you, Chairman Schapiro, and members of your senior team earlier this week. We appreciated the opportunity to have Chairman Schapiro and Assistant Secretary Borzi connect directly on matters of mutual concern. During the meeting, we talked about the Memorandum of Understanding (MOU) between DOL and the SEC and the importance of updating it. As mentioned, we strongly believe the MOU has helped strengthen our inter-agency relationship, and that it has been a valuable tool in our coordination of regulatory activities, examination of research and market trends, and in leveraging resources with respect to enforcement cases. We were delighted that Chairman Schapiro shared our interest in starting that renewal process and asked that we work with you to take the next steps.

As follow-up, we are interested in opening discussions with the SEC regarding extending the effective period of the MOU, and the possibility of expanding it to include other federal agencies that have been important partners in our more recent inter-agency coordination efforts, for example the Commodities Futures Trading Commission. It might be helpful for us to have a brief conference call first to talk about scheduling, sketch out a draft agenda, identify members of our respective staffs who should be included in this process, and discuss the idea of whether we should invite staff from the CFTC to the first meeting.

As to the draft agenda, in addition to discussing an extension and expansion of the MOU, it may make sense to also use the meeting as an opportunity to discuss the status of our ongoing activities on two pending initiatives and two new opportunities for consultation on areas of mutual interest:

- DOL fiduciary definition regulation under section 3(21) of ERISA and your initiative on a uniform fiduciary standard of conduct for broker-dealers and investment advisers under the federal securities laws;
- Our respective regulatory initiatives on improving disclosure requirements for target date funds;
- Options for coordination on development of best practices guidance for hedge fund and private equity investors. GAO and a Department of Labor's ERISA Advisory Council have recommended that the department publish guidance for ERISA plans that invest in such alternative assets. To date, we have not done so, in part because of a concern that the lack of uniformity among such investments could make development of useful guidance difficult; and
- Options for confirming that FINRA rule 2210(d)(1)(D) and any similar SEC standard would not conflict with a DOL regulatory requirement to include on a pension plan periodic benefit statement a projection of a plan participants current account balance to retirement age as part of a projected lifetime income/annuity illustration

Let us know what you think. I expect SEC staff may also have matters that they would like to include on the agenda, so please let me know if you think there are additional items we should discuss. Thanks again for your time this Wednesday, and for your consideration. We so richly appreciate it. Have a great weekend. All the best.

**Cc:** Hauser, Timothy - EBSA  
**Subject:** RE: Calls to discuss fiduciary duty exemption

Joe and George,

Unfortunately, I just learned that I will probably have to be out of the office on Friday. Can we schedule the disclosures call for next week? Here are the times that work for our team:

Tues. (9/23) 9-10  
Wed. (9/24) 9-12:30; 4-5  
Thurs. (9/25) 9-10; 11-5  
Fri. (9/26) 10-1; 3:30-5

Thanks,  
Jen

**Subject:** RE: Calls to discuss fiduciary duty exemption

Hi, Jen. We would like to continue the discussion of “point of sale” disclosure this week. Thursday is not good, but Friday (9/19) between 12-3 is open for me. I am copying Treasury folks and others here in EBSA to see who wants to participate in the call and who is available on Friday. Thanks.

**Importance:** High

Thanks, Jen. I think it would be terrific if we could get another discussion of point of sale disclosures done this week and include the Treasury folks. Then, we could move on to the other topics next week when I’m back.

I’ve asked the head of our Office of Regulations and Interpretations, Joe Canary, to work with you on getting this set up. More generally, he’s always a good person to talk to on this project! Joe’s number is [REDACTED].

**Sent:** Tuesday, September 16, 2014 3:31 PM  
**To:** Hauser, Timothy - EBSA  
**Subject:** Calls to discuss fiduciary duty exemption

Tim,

My apologies for the delay getting back to you with proposed times to discuss point of sale disclosures, the low-fee safe harbor, and the general exemption outline. Since you are out of the office for the next several days, maybe we should try to schedule the point of sale disclosure discussion with DOL/Treasury staff first. I list below the days and times this week when our staff is available. Please let me know if there is someone else I should contact about scheduling this call while you are gone.

Thurs. (9/18) 11:30-12:30; 2-3:30

Fri. (9/19) 12-3

For the other two topics, the team is available the following days and times next week. Please let me know what works for all of you.

Tues. (9/23) 9-10

Wed. (9/24) 9-12:30; 4-5

Thurs. (9/25) 9-10; 11-5

Fri. (9/26) 10-1; 3:30-5

Thanks,

**Jen Porter**  
Chair's Office

### **TD Ameritrade**

3a. “Self-Directed Account. I understand that Accounts opened with you are self-directed. I am responsible for all purchase and sell orders, decisions to continue with an investment strategy or to hold an investment, and instructions placed in my Account. Unless you provide advice to me that is clearly identified by you as an individualized recommendation for me, any investment decision that I make or investment strategy that I utilize, including the decision to hold any and all of the securities or derivatives in the Account, is based on my own investment decisions or those of my agent and is at my own risk. All investments involve risk, and unless you provide individualized recommendations to me, I or my agent are responsible for determining the suitability of any trade, investment, investment strategy, and risk associated with my investments. TD Ameritrade Content or Third-Party Content I access through you does not constitute a recommendation to invest in any security or derivative, or to utilize any investment strategy.”

13. “Advice

- a. Unless otherwise noted by you in writing, you will act only as broker/dealer and not as an investment advisor governed by the Investment Advisers Act of 1940.
- b. When I act as a self-directed investor, I am responsible for determining the suitability of any particular investment strategy, transaction, or security. You have no responsibility for any such determination unless you otherwise agree in writing, or you or your representative gives advice directly to me that is identified clearly as recommendation by you to enter into a particular transaction or to buy or sell a particular security or securities.
- c. From time to time, in connection with my Account, you may provide investment-related guidance and recommendations to me. I agree that when you make a recommendation to me, you determine its suitability for me at the time of the recommendation. If the recommendation transaction is not effected contemporaneously with your recommendation, I agree you will have no liability if I choose to effect such transaction in the future. Furthermore, when you are acting as broker/dealer for my Account, I agree that you have no ongoing duty to ensure a recommendation continues to be suitable for me. Rather, I have an affirmative duty to monitor profits and losses in my Account, along with my investment goals and risk tolerance and to modify my trading decisions accordingly.
- d. Unless otherwise agreed to in writing, you do not have discretionary authority over my Account or an obligation to review or to make recommendations for the investment of securities or cash in my Account.
- e. Any research, analysis, news, or other information made available by you does not constitute an individualized recommendation by you to buy or sell a particular security.
- f. You do not provide legal, tax, or estate planning advice.”

### **UBS**

### **“Our Services as a Broker-Dealer and Relationship With You**

As a full-service broker-dealer, our services are not limited to taking customer orders and executing securities transactions. In this capacity, we provide a variety of services relating to investments in securities, including providing investment research, executing trades and providing custody services. In a brokerage account, you pay us commissions and applicable fees each time we execute a transaction in your account. We also make recommendations to our brokerage clients about whether to buy, sell or hold securities. We consider this to be part of our brokerage services and do not charge a separate fee for this advice. Our recommendations must be suitable for you, in light of your particular financial circumstances, goals and tolerance for risk.

When we work with you in our capacity as broker-dealer, we do not make investment decisions for you or manage your accounts on a discretionary basis. We will only buy or sell securities for brokerage clients based on specific directions from you.

### **Our Responsibilities to You as a Broker-Dealer**

When we act as your broker, we are subject to the Securities Exchange Act of 1934, the Securities Act of 1933, the rules of self-regulatory organizations such as the Financial Industry Regulatory Authority (FINRA), the rules of the New York Stock Exchange and applicable state laws.

The standards for broker-dealers include the following:

- As your broker-dealer, we have a duty to deal fairly with you. Consistent with our duty of fairness, we are obligated to make sure that the prices you receive when we execute transactions for you are reasonable and fair in light of prevailing market conditions and that the commissions and other fees we charge you are not excessive.
- We must have a reasonable basis for believing that any securities recommendations we make to you are suitable and appropriate for you, given your individual financial circumstances, needs and goals.
- We are permitted to trade with you for our own account (“principal trading”) or for an affiliate or another client and may earn a profit on those trades. When we engage in these trades, we disclose the capacity in which we acted on your confirmation, though we are not required to communicate this or obtain your consent in advance or to inform you of the profit earned on the trades.
- **When we act as your broker-dealer, we do not enter into a fiduciary relationship with you. Absent special circumstances, we are not held to the same legal standards that apply when providing investment advisory services.** Our legal obligations to disclose detailed information to you about the nature and scope of our business, personnel, fees, conflicts between our interests and your interests and other matters are more limited than when we are providing investment advisory services to you.

### **Principal Transactions; Client/Firm Relationship to IRA and QP Assets**

You understand that UBS or its affiliates may execute securities transactions in your Account acting as principal, as permitted by law, and you direct us to do so where we would execute such a trade as principal in the ordinary course of our business. Likewise, we may expressly direct our clearing affiliates to enter into a principal transaction when we would ordinarily execute a transaction as principal. Unless otherwise agreed to in writing, you agree that:

- Neither we nor our employees or agents agree that the guidance and information we provide may be used as a primary basis for investment or asset allocation decisions you make regarding your IRAs and QP assets. Therefore, none of these persons intends to provide “investment advice” as defined under applicable ERISA regulations or to act now or in the future as a “fiduciary” as defined in ERISA or the Internal Revenue Code or similar state or local laws, and;
- You will make your own independent decisions regarding investments in your Account.”

**To:** Hauser, Timothy - EBSA  
**Subject:** Disclosure and Audit Requirements

Tim,

I enjoyed our meeting earlier today. It was great to put faces to names. I would like to schedule a call to discuss the disclosure and audit requirements under the federal securities laws. Due to vacation schedules this week, it looks like sometime next week is our best bet with everyone on the team. Are you free at any of the following times?

Tuesday Sept. 2 at 3 - 5  
Wednesday Sept. 3 at 1:30  
Thursday Sept. 4 at 4-5

Also, following our conversation today, please let me know if it would be helpful for our economists to talk again about data and the economic analysis. I will be happy to set something up.

Thanks,

**Jen Porter**

ADMINISTRATIVE LAW — CORPORATE GOVERNANCE REGULATION — D.C. CIRCUIT FINDS SEC PROXY ACCESS RULE ARBITRARY AND CAPRICIOUS FOR INADEQUATE ECONOMIC ANALYSIS. — *Business Roundtable v. SEC*, 647 F.3d 1144 (D.C. Cir. 2011).

In the midst of a contested, voluminous notice-and-comment rulemaking, Congress's Dodd-Frank Wall Street Reform and Consumer Protection Act<sup>1</sup> (Dodd-Frank Act) authorized the Securities and Exchange Commission (SEC) to expand proxy ballot access for shareholder-nominated candidates for boards of directors.<sup>2</sup> Recently, in *Business Roundtable v. SEC*,<sup>3</sup> the D.C. Circuit struck down the resulting SEC rule, finding that the Commission's failure to adequately consider economic consequences made its decision arbitrary and capricious.<sup>4</sup> By parsing in fine detail the methods and results of the SEC's cost-benefit analysis, the panel asserted judicial power in a field that courts struggle to oversee and applied an excessively exhausting standard that all but bars contested reforms.

While proxy access proposals are nearly as old as the SEC, a renewed proxy access debate has raged for nearly a decade.<sup>5</sup> Before directors' elections, companies distribute proxy materials that allow shareholders who do not attend annual meetings to vote their shares.<sup>6</sup> Typically, these proxy materials include only those director candidates nominated by the existing board, but reformers have sought enhanced accountability by requiring that companies include shareholder nominees in official proxy materials.<sup>7</sup> Critics have countered that mandating access to proxy ballots would encourage expensive election fights and create corporate inefficiency.<sup>8</sup>

Thus the battle lines were drawn for a June 2009 proposal regarding one of "the most controversial regulatory issues in the Commis-

Olin Ctr. for Law, Econ. & Bus., Discussion Paper No. 516, 2005), available at [http://papers.ssrn.com/sol3/papers.cfm?abstract\\_id=686184](http://papers.ssrn.com/sol3/papers.cfm?abstract_id=686184).

<sup>8</sup> See, e.g., Martin Lipton & William Savitt, *The Many Myths of Lucian Bebchuk*, 93 VA. L. REV. 733, 743–49 (2007).

sion's history.<sup>9</sup> Concerned about links between limited board accountability and the economic crisis,<sup>10</sup> the SEC proposed Exchange Act Rule 14a-11 (Rule 14a-11), which would require that companies include qualifying shareholder nominees on proxy ballots.<sup>11</sup> Over the next fifteen months, the Commission received about 600 letters regarding the proposed rule from an array of interested parties.<sup>12</sup>

Near the end of the contentious process, and amid concerns about the SEC's statutory authority to issue a proxy access rule, Congress interceded.<sup>13</sup> Section 971 of Dodd-Frank provides that "[t]he Commission may issue rules [expanding proxy access], under such terms and conditions as the Commission determines are in the interests of shareholders and for the protection of investors."<sup>14</sup> Legislative history suggests Congress intended that the SEC have "wide latitude in setting the terms of such proxy access."<sup>15</sup>

In September 2010, two months after Dodd-Frank became law, the SEC promulgated a final regulation adopting Rule 14a-11 by a partisan three to two vote.<sup>16</sup> The final rule devoted nineteen pages in the Federal Register to cost-benefit analysis of the SEC proposals<sup>17</sup> and another six to potential burdens on efficiency, competition, and capital formation.<sup>18</sup> The Commission explained that Rule 14a-11 would increase corporate performance and argued that any costs of the rule were a necessary consequence of enforcing traditional state law rights.<sup>19</sup>

The Business Roundtable, a consortium of prominent corporate executives, challenged Rule 14a-11 in the Court of Appeals for the D.C. Circuit as based "on a fundamentally flawed assessment of the rules'

<sup>16</sup> Ronald D. Orol, *SEC Approves Rule Giving Shareholders New Power*, MARKETWATCH (Aug. 25, 2010, 11:19 AM), <http://www.marketwatch.com/story/sec-approves-rule-giving-shareholders-new-power-2010-08-25>. Commissioners Troy Paredes and Kathleen Casey both criticized the theory and the methodology behind the final rule. See *Bus. Roundtable*, 647 F.3d at 1148.

<sup>17</sup> See Facilitating Shareholder Director Nominations, 75 Fed. Reg. at 56,753-71.

<sup>18</sup> See *id.* at 56,771-76. The SEC conducted this analysis to comply with 15 U.S.C. §§ 78c(f), 78w(a)(2), and 80a-2(c) (2006).

<sup>19</sup> Facilitating Shareholder Director Nominations, 75 Fed. Reg. at 56,755, 56,765.

costs, benefits, and effects on efficiency, competition, and capital formation.”<sup>20</sup> The plaintiffs alleged that the application of Rule 14a-11 to investment companies was similarly arbitrary and capricious and that the rule violated First Amendment protections of corporate speech.<sup>21</sup> The SEC stayed the rule pending the outcome of the case.<sup>22</sup>

The D.C. Circuit vacated Rule 14a-11.<sup>23</sup> Writing for a unanimous panel, Judge Ginsburg<sup>24</sup> concluded that the SEC had “failed once again . . . adequately to assess the economic effects of a new rule.”<sup>25</sup> Under arbitrary and capricious review,<sup>26</sup> the Commission must have “examine[d] the relevant data and articulate[d] a satisfactory explanation for its action including a rational connection between the facts found and the choices made.”<sup>27</sup> Further, Congress in 1996 imposed on the SEC a special obligation to consider effects on “efficiency, competition, and capital formation.”<sup>28</sup> Action is thus arbitrary and capricious if the SEC has failed to “apprise itself — and hence the public and Congress — of the economic consequences of a proposed regulation.”<sup>29</sup> As in *American Equity Investment Life Insurance Co. v. SEC*<sup>30</sup> and *Chamber of Commerce v. SEC*,<sup>31</sup> recent D.C. Circuit cases assessing SEC economic analyses, the court held that the Commission’s action fell short. Judge Ginsburg rebuked an agency that, in his eyes, had “inconsistently and opportunistically framed the costs and benefits of the rule; failed adequately to quantify the certain costs or to explain why those costs could not be quantified; neglected to support its predictive judgments; contradicted itself; and failed to respond to substantial problems raised by commenters.”<sup>32</sup>

<sup>20</sup> Opening Brief of Petitioners Business Roundtable and Chamber of Commerce of the United States of America at 31, *Bus. Roundtable*, 647 F.3d 1144 (No. 10-1305), 2010 WL 5116461, at \*31.

<sup>21</sup> *Id.* at 53–59, 2010 WL 5116461, at \*53–59.

<sup>22</sup> Order Granting Stay of Effect of Commission’s Facilitating Shareholder Director Nominations Rules, Exchange Act Release No. 63,031 (Oct. 4, 2010), available at <http://www.sec.gov/rules/other/2010/33-9149.pdf>.

<sup>23</sup> *Bus. Roundtable*, 647 F.3d at 1156.

<sup>24</sup> Chief Judge Sentelle and Judge Brown joined the opinion.

<sup>25</sup> *Bus. Roundtable*, 647 F.3d at 1148.

<sup>26</sup> See Administrative Procedure Act, 5 U.S.C. § 706(2)(A) (2006).

<sup>27</sup> *Bus. Roundtable*, 647 F.3d at 1148 (alterations in original) (quoting *Motor Vehicle Mfrs. Ass’n of U.S., Inc. v. State Farm Mut. Auto. Ins. Co.*, 463 U.S. 29, 43 (1983)) (internal quotation marks omitted).

<sup>28</sup> *Id.* (quoting 15 U.S.C. §§ 78c(f), 78w(a)(2), 80a-2(c) (2006)) (internal quotation marks omitted). The new language sought to extend SEC consideration to economic efficiency, beyond its traditional focus on investor protection. See 15 U.S.C. §§ 78c(f), 80a-2(c).

<sup>29</sup> *Bus. Roundtable*, 647 F.3d at 1148 (quoting *Chamber of Commerce v. SEC*, 412 F.3d 133, 144 (D.C. Cir. 2005)) (internal quotation marks omitted).

<sup>30</sup> 613 F.3d 166, 167–68 (D.C. Cir. 2010) (vacating SEC rule regarding fixed index annuities for failure to consider the rule’s economic effects).

<sup>31</sup> 412 F.3d 133, 136 (D.C. Cir. 2005) (vacating SEC rule regarding independent directors on investment company boards for failure to consider costs and alternatives).

<sup>32</sup> *Bus. Roundtable*, 647 F.3d at 1148–49.

The court found that Rule 14a-11 was arbitrary and capricious on three basic grounds.<sup>33</sup> First, and most prominently, the court adjudged the SEC's analysis of costs and benefits to be insufficient.<sup>34</sup> The SEC underestimated the expenses that directors would incur campaigning against shareholder nominees because the Commission relied on projections with "no basis beyond mere speculation."<sup>35</sup> The SEC similarly erred when, to support its position that Rule 14a-11 would improve board performance and increase shareholder value, it "relied exclusively and heavily upon two relatively unpersuasive studies" instead of following "the numerous studies submitted by commenters that reached the opposite result."<sup>36</sup> The SEC's analysis also broke down when it explained that existing state law rights, not the SEC rules designed to enforce them, were to blame for potential costs: "[T]his type of reasoning, which fails to view a cost at the margin, is illogical and, in an economic analysis, unacceptable."<sup>37</sup>

Second, the court held that the SEC failed to consider properly how institutional investors like unions and pension funds might manipulate Rule 14a-11.<sup>38</sup> Such concerns pervaded corporate comment letters but were strenuously opposed by shareholder advocates.<sup>39</sup> Judge Ginsburg sympathized with the Business Roundtable's view of institutional investors, finding arbitrary action because, though "[t]he Commission did not completely ignore these potential costs, . . . it [did not] adequately address them."<sup>40</sup>

Third, the court criticized the SEC's projections of the frequency of election contests.<sup>41</sup> The Commission argued that its figures were correct, and that they applied only for purposes of the Paperwork Reduction Act,<sup>42</sup> but the court was not persuaded, declaring the estimates "internally inconsistent and therefore arbitrary."<sup>43</sup>

<sup>33</sup> *Id.*

<sup>34</sup> *Id.* at 1149-51.

<sup>35</sup> *Id.* at 1150. The SEC "did nothing to estimate and quantify the costs it expected companies to incur" even though "empirical evidence about expenditures in traditional proxy contests was readily available." *Id.*

<sup>40</sup> *Id.* at 1152.

<sup>41</sup> *Id.* at 1152-54.

<sup>42</sup> Final Brief of the Securities and Exchange Commission at 42-43, *Bus. Roundtable*, 647 F.3d 1144 (No. 10-1305), 2011 WL 2014799, at \*42-43 (claiming that estimates for the Paperwork Reduction Act, 44 U.S.C. §§ 3501-3521 (2006 & Supp. IV 2011), designed to assess the burden of collecting and reporting information, did not have wide implications); *cf.* *Balt. Gas & Elec. Co. v. Natural Res. Def. Council, Inc.*, 462 U.S. 87, 105 (1983) (suggesting a faulty projection was not necessarily arbitrary and capricious if it was made for a limited purpose).

<sup>43</sup> *Bus. Roundtable*, 647 F.3d at 1153.

Beyond those three basic reasons, the court explained that the application of Rule 14a-11 to investment companies would have been separately arbitrary and capricious because it had been justified with “unutterably mindless” reasoning.<sup>44</sup> The court did not reach the First Amendment corporate speech challenge.<sup>45</sup>

In *Business Roundtable*, the D.C. Circuit waded into a political fight under the guise of dispassionate scientific oversight to vacate a proxy access rule produced after years of open, contentious debate. While statutes require the SEC to consider the consequences of its regulations,<sup>46</sup> courts should recognize the limitations of economics and of their own expertise by acknowledging thorough, competent analyses. Perpetuating *Business Roundtable*’s exacting review could impose a judicial blockade on complex financial rulemaking, which would impede regulators’ ability to police the marketplace in accordance with congressional intent.

Courts hardly outperform the SEC at evaluating the imperfect science of economics.<sup>47</sup> Judges can struggle with expert testimony in their own decisions,<sup>48</sup> and traditional training leaves most jurists ill-prepared to engage with sophisticated econometrics.<sup>49</sup> And the validity of economic analysis is cloudier than that of many other scientific methods because economic models rely on complex, interrelated assumptions.<sup>50</sup> Even practiced analysts struggle to isolate the impact of

---

<sup>44</sup> *Id.* at 1156. The SEC claimed that costs for investment companies would be incurred only if shareholder nominees won elections, an argument the court faulted as undercutting the rule’s basic rationale. *Id.* at 1155–56.

<sup>45</sup> *Id.* at 1156.

<sup>46</sup> See 15 U.S.C. §§ 78c(f), 78w(a)(2), 80a-2(c) (2006).

<sup>47</sup> In previous decisions, the D.C. Circuit has recognized expertise as a reason for deference. See, e.g., *Milk Indus. Found. v. Glickman*, 132 F.3d 1467, 1478 (D.C. Cir. 1998) (“Under the arbitrary and capricious standard of review, ‘an agency’s predictive judgments about areas that are within the agency’s field of discretion and expertise’ are entitled to ‘particularly deferential’ review, as long as they are reasonable.” (citations omitted) (quoting *Int’l Ladies’ Garment Workers’ Union v. Donovan*, 722 F.2d 795, 821 (D.C. Cir. 1983))).

<sup>48</sup> See *Daubert v. Merrell Dow Pharm., Inc.*, 509 U.S. 579, 599 (1993) (Rehnquist, C.J., concurring in part and dissenting in part) (“[The briefs here] deal with definitions of scientific knowledge, scientific method, scientific validity, and peer review — in short, matters far afield from the expertise of judges. . . . [T]he unusual subject matter should cause us to proceed with great caution in deciding more than we have to, because our reach can so easily exceed our grasp.”).

<sup>49</sup> See Patricia M. Wald, *Judicial Review: Talking Points*, 48 ADMIN. L. REV. 350, 352 (1996) (“[Q]uestions have been raised about whether we in the courts are competent to review the minutiae of risk or cost-benefit analysis. For most of us, the answer is no.”). See generally Patricia M. Wald, *Limits on the Use of Economic Analysis in Judicial Decisionmaking*, LAW & CONTEMP. PROBS., Autumn 1987, at 225.

<sup>50</sup> See generally JOSHUA D. ANGRIST & JÖRN-STEFFEN PISCHKE, *MOSTLY HARMLESS ECONOMETRICS* 4–7 (2009) (explaining the limits of econometric experimental design).

factors like proxy access,<sup>51</sup> and good-faith differences abound. Critics have little trouble singling out a controversial projection or a contentious source on either side of a reasoned debate. In such cases, it can be exceedingly difficult to distinguish principled from political nitpicking. Economic models rely on politically controversial assumptions: the numbers may look concrete, but their origins often are not.<sup>52</sup> Whether one believes that proxy access will improve corporate performance, for example, depends a great deal on one's political ideology.<sup>53</sup> In *Business Roundtable*, the court took aim at just such political judgments despite the judiciary's institutional limitations.<sup>54</sup>

Not surprisingly given the complexity of economic analysis, Judge Ginsburg's opinion made missteps similar to those for which he scolded the SEC. When the court faulted the SEC's discounting of potential costs of proxy fights without empirical evidence as "mere speculation,"<sup>55</sup> it mistakenly assumed that the Chamber of Commerce's economic arguments rested on firmer ground.<sup>56</sup> Pages later, the court, without empirical support, relied solely on a single, speculative sentence to criticize the SEC for failing to estimate the costs of union pension plans using proxy access as leverage in contract negotiations.<sup>57</sup>

See generally Kenneth G. Dau-Schmidt, *Relaxing Traditional Economic Assumptions and Values: Toward a New Multidisciplinary Discourse on Law*, 42 SYRACUSE L. REV. 181 (1991) (examining assumptions underlying "neoclassical efficiency analysis," *id.* at 182).

<sup>53</sup> See Joseph A. Grundfest, *The SEC's Proposed Proxy Access Rules: Politics, Economics, and the Law*, 65 BUS. LAW 361, 378 (2010) ("The proxy access debate is not an abstract academic controversy . . . . It is a knockdown, drag-out political brawl.").

<sup>54</sup> Cf. *Chevron U.S.A. Inc. v. Natural Res. Def. Council, Inc.*, 467 U.S. 837, 865 (1984) ("Judges are not experts in the field . . . Courts must [not] . . . reconcile competing political interests . . . on the basis of the judges' personal policy preferences."); *id.* (holding that the judiciary should defer to an agency interpretation because "the regulatory scheme is technical and complex, the agency considered the matter in a detailed and reasoned fashion, and the decision involves reconciling conflicting policies"); Thomas J. Miles & Cass R. Sunstein, *The Real World of Arbitrariness Review*, 75 U. CHI. L. REV. 761, 814 (2008) (presenting empirical findings "that in important domains, the hard look is hardened, or softened, by the political predilections of federal judges").

<sup>55</sup> *Bus. Roundtable*, 647 F.3d at 1150.

<sup>56</sup> See J. Robert Brown, Jr., *Shareholder Access and Uneconomic Economic Analysis: Business Roundtable v. SEC* 3–4 (Univ. of Denver Legal Studies Research Paper Series, Working Paper No. 11-14, 2011), available at <http://ssrn.com/abstract=1917451> ("The approach used by the court . . . incorrectly interpreted the board's fiduciary obligations . . . [and relied on a comment letter that] was based upon a faulty premise.").

<sup>57</sup> *Bus. Roundtable*, 647 F.3d at 1152 ("[S]tate governments and labor unions . . . often appear to be driven by concerns other than a desire to increase the economic performance of the companies in which they invest." (alteration in original) (quoting Leo E. Strine, Jr., *Toward a True Corporate Republic: A Traditionalist Response to Bebchuk's Solution for Improving Corporate America*,

Worse, in arguing that the SEC chose wrongly from conflicting studies about the effects of dissident directors on board performance,<sup>58</sup> the court simply chose the opposite side of a politically charged debate. Empirical evidence drawn from this very case suggests the court's error: markets preferred the 2010 proxy access rule, as shares of firms that would have been most affected lost value when the SEC stayed Rule 14a-11.<sup>59</sup>

These inconsistencies help demonstrate that no analysis of a politically contentious issue could survive *Business Roundtable's* exacting arbitrary and capricious review. Over the years, the D.C. Circuit has earned a reputation for rigorous review of agency action,<sup>60</sup> but its current approach sets the bar even higher. When costs and benefits are inestimable and projections differ, a panel could always vacate rule-making, and would be particularly likely to do so when the agency's political assumptions affront the court's sensibilities.

Such stringent oversight should be especially suspect when statutes suggest proregulatory congressional intent. Since Congress fell short of legislating Rule 14a-11, Dodd-Frank cannot be understood as fully endorsing the SEC's proposal.<sup>61</sup> Still, at the very least, Dodd-Frank's

<sup>58</sup> *Bus. Roundtable*, 647 F.3d at 1150–51. Theoretical models relating proxy access to board performance are especially unscientific. See Bo Becker et al., *Does Shareholder Proxy Access Improve Firm Value? Evidence from the Business Roundtable Challenge* 12 (Harvard Bus. Sch., Working Paper No. 11-052, 2010) (“[Boards’ endogeneity] makes the effect of any board characteristic . . . impossible to identify based only on the observed correlation between that characteristic and firm performance.”) (citing Benjamin E. Hermalin & Michael S. Weisbach, *Endogenously Chosen Boards of Directors and Their Monitoring of the CEO*, 88 AM. ECON. REV. 96 (1998)), available at [http://papers.ssrn.com/sol3/papers.cfm?abstract\\_id=1695666](http://papers.ssrn.com/sol3/papers.cfm?abstract_id=1695666).

<sup>59</sup> Becker et al., *supra* note 58, at 4 (“Using a 1-day event window around October 4, 2010, we find that share prices of companies that would have been most exposed to shareholder access declined significantly compared to share prices of companies that would have been most insulated from the rule.”).

<sup>60</sup> See Peter L. Strauss, *Changing Times: The APA at Fifty*, 63 U. CHI. L. REV. 1389, 1407–09 (1996). The D.C. Circuit’s strict standards persist despite past corrections from the Supreme Court. See, e.g., *Balt. Gas & Elec. Co. v. Natural Res. Def. Council, Inc.*, 462 U.S. 87, 108 (1983) (finding the court’s scrutiny of a “minor ambiguity” to be “totally inappropriate”); *Vt. Yankee Nuclear Power Corp. v. Natural Res. Def. Council, Inc.*, 435 U.S. 519, 525 (1978) (concluding that the court “improperly intruded into the agency’s decisionmaking process”); see also Stephen Breyer, *Vermont Yankee and the Courts’ Role in the Nuclear Energy Controversy*, 91 HARV. L. REV. 1833, 1833 (1978) (“In the *Vermont Yankee* case, the Court of Appeals for the District of Columbia Circuit sought to require additional agency procedures [when dealing with a complex and important scientific or technical issue]. . . . The Supreme Court has reversed that approach, correctly so in my view . . .” (footnotes omitted)).

<sup>61</sup> See Dodd-Frank Act, Pub. L. No. 111-203 § 971(b), 124 Stat. 1376, 1915 (2010) (codified at 15 U.S.C. § 78n(a) (2006 & Supp. IV 2011)) (providing that the SEC “may” issue a proxy rule, but not requiring that it shall do so). But see Thomas Quaadman, *Dodd-Frank: Governance Issues Galore and Not Limited to Financial Institutions*, METROPOLITAN CORP. COUNS., Aug. 2010, at 18 (“Some have speculated that [Dodd-Frank’s] legislative grant of authority was given to try

grant of rulemaking authority contemplated the possibility of a proxy access rule.<sup>62</sup> But the strictness of the *Business Roundtable* standard of review ensured that the D.C. Circuit would only entrench the status quo.

The effects of this decision are troubling. The *Business Roundtable* ruling disrupts the SEC's ability to fulfill its statutory mandate to oversee the proxy process.<sup>63</sup> Many imagine *Business Roundtable* as the first domino to fall in the Dodd-Frank universe.<sup>64</sup> In an evolving financial climate, ossification of SEC regulations<sup>65</sup> may contribute to market failures that Congress designed Dodd-Frank to prevent.

Because the height of the *Business Roundtable* hurdle may prevent the SEC from demonstrating adequate analysis even after extraordinary efforts, Congress should guard desirable actions from excessive scrutiny. Congress could repeal the economic analysis requirement, or it could ensure that future legislation instructs courts to apply more deferential standards of review to particular regulations. Without such action, Congress may have to expend scarce resources enacting specific legislation absent a different judicial position.

The D.C. Circuit's hard-line application of economic review should change. Courts have little place joining political fights or parsing complex economic analyses. They should avoid using arbitrary and capricious review to impose unattainable standards that bar agency action.

ADMINISTRATIVE LAW — CORPORATE GOVERNANCE REGULATION — D.C. CIRCUIT FINDS SEC PROXY ACCESS RULE ARBITRARY AND CAPRICIOUS FOR INADEQUATE ECONOMIC ANALYSIS. — *Business Roundtable v. SEC*, 647 F.3d 1144 (D.C. Cir. 2011).

In the midst of a contested, voluminous notice-and-comment rulemaking, Congress's Dodd-Frank Wall Street Reform and Consumer Protection Act<sup>1</sup> (Dodd-Frank Act) authorized the Securities and Exchange Commission (SEC) to expand proxy ballot access for shareholder-nominated candidates for boards of directors.<sup>2</sup> Recently, in *Business Roundtable v. SEC*,<sup>3</sup> the D.C. Circuit struck down the resulting SEC rule, finding that the Commission's failure to adequately consider economic consequences made its decision arbitrary and capricious.<sup>4</sup> By parsing in fine detail the methods and results of the SEC's cost-benefit analysis, the panel asserted judicial power in a field that courts struggle to oversee and applied an excessively exhausting standard that all but bars contested reforms.

While proxy access proposals are nearly as old as the SEC, a renewed proxy access debate has raged for nearly a decade.<sup>5</sup> Before directors' elections, companies distribute proxy materials that allow shareholders who do not attend annual meetings to vote their shares.<sup>6</sup> Typically, these proxy materials include only those director candidates nominated by the existing board, but reformers have sought enhanced accountability by requiring that companies include shareholder nominees in official proxy materials.<sup>7</sup> Critics have countered that mandating access to proxy ballots would encourage expensive election fights and create corporate inefficiency.<sup>8</sup>

Thus the battle lines were drawn for a June 2009 proposal regarding one of "the most controversial regulatory issues in the Commis-

Olin Ctr. for Law, Econ. & Bus., Discussion Paper No. 516, 2005), available at [http://papers.ssrn.com/sol3/papers.cfm?abstract\\_id=686184](http://papers.ssrn.com/sol3/papers.cfm?abstract_id=686184).

<sup>8</sup> See, e.g., Martin Lipton & William Savitt, *The Many Myths of Lucian Bebchuk*, 93 VA. L. REV. 733, 743–49 (2007).

sion's history.<sup>9</sup> Concerned about links between limited board accountability and the economic crisis,<sup>10</sup> the SEC proposed Exchange Act Rule 14a-11 (Rule 14a-11), which would require that companies include qualifying shareholder nominees on proxy ballots.<sup>11</sup> Over the next fifteen months, the Commission received about 600 letters regarding the proposed rule from an array of interested parties.<sup>12</sup>

Near the end of the contentious process, and amid concerns about the SEC's statutory authority to issue a proxy access rule, Congress interceded.<sup>13</sup> Section 971 of Dodd-Frank provides that "[t]he Commission may issue rules [expanding proxy access], under such terms and conditions as the Commission determines are in the interests of shareholders and for the protection of investors."<sup>14</sup> Legislative history suggests Congress intended that the SEC have "wide latitude in setting the terms of such proxy access."<sup>15</sup>

In September 2010, two months after Dodd-Frank became law, the SEC promulgated a final regulation adopting Rule 14a-11 by a partisan three to two vote.<sup>16</sup> The final rule devoted nineteen pages in the Federal Register to cost-benefit analysis of the SEC proposals<sup>17</sup> and another six to potential burdens on efficiency, competition, and capital formation.<sup>18</sup> The Commission explained that Rule 14a-11 would increase corporate performance and argued that any costs of the rule were a necessary consequence of enforcing traditional state law rights.<sup>19</sup>

The Business Roundtable, a consortium of prominent corporate executives, challenged Rule 14a-11 in the Court of Appeals for the D.C. Circuit as based "on a fundamentally flawed assessment of the rules'

<sup>17</sup> See Facilitating Shareholder Director Nominations, 75 Fed. Reg. at 56,753-71.

<sup>18</sup> See *id.* at 56,771-76. The SEC conducted this analysis to comply with 15 U.S.C. §§ 78c(f), 78w(a)(2), and 80a-2(c) (2006).

<sup>19</sup> Facilitating Shareholder Director Nominations, 75 Fed. Reg. at 56,755, 56,765.

costs, benefits, and effects on efficiency, competition, and capital formation.”<sup>20</sup> The plaintiffs alleged that the application of Rule 14a-11 to investment companies was similarly arbitrary and capricious and that the rule violated First Amendment protections of corporate speech.<sup>21</sup> The SEC stayed the rule pending the outcome of the case.<sup>22</sup>

The D.C. Circuit vacated Rule 14a-11.<sup>23</sup> Writing for a unanimous panel, Judge Ginsburg<sup>24</sup> concluded that the SEC had “failed once again . . . adequately to assess the economic effects of a new rule.”<sup>25</sup> Under arbitrary and capricious review,<sup>26</sup> the Commission must have “examine[d] the relevant data and articulate[d] a satisfactory explanation for its action including a rational connection between the facts found and the choices made.”<sup>27</sup> Further, Congress in 1996 imposed on the SEC a special obligation to consider effects on “efficiency, competition, and capital formation.”<sup>28</sup> Action is thus arbitrary and capricious if the SEC has failed to “apprise itself — and hence the public and Congress — of the economic consequences of a proposed regulation.”<sup>29</sup> As in *American Equity Investment Life Insurance Co. v. SEC*<sup>30</sup> and *Chamber of Commerce v. SEC*,<sup>31</sup> recent D.C. Circuit cases assessing SEC economic analyses, the court held that the Commission’s action fell short. Judge Ginsburg rebuked an agency that, in his eyes, had “inconsistently and opportunistically framed the costs and benefits of the rule; failed adequately to quantify the certain costs or to explain why those costs could not be quantified; neglected to support its predictive judgments; contradicted itself; and failed to respond to substantial problems raised by commenters.”<sup>32</sup>

<sup>26</sup> See Administrative Procedure Act, 5 U.S.C. § 706(2)(A) (2006).

<sup>27</sup> *Bus. Roundtable*, 647 F.3d at 1148 (alterations in original) (quoting *Motor Vehicle Mfrs. Ass’n of U.S., Inc. v. State Farm Mut. Auto. Ins. Co.*, 463 U.S. 29, 43 (1983)) (internal quotation marks omitted).

<sup>28</sup> *Id.* (quoting 15 U.S.C. §§ 78c(f), 78w(a)(2), 80a-2(c) (2006)) (internal quotation marks omitted). The new language sought to extend SEC consideration to economic efficiency, beyond its traditional focus on investor protection. See 15 U.S.C. §§ 78c(f), 80a-2(c).

<sup>29</sup> *Bus. Roundtable*, 647 F.3d at 1148 (quoting *Chamber of Commerce v. SEC*, 412 F.3d 133, 144 (D.C. Cir. 2005)) (internal quotation marks omitted).

<sup>30</sup> 613 F.3d 166, 167–68 (D.C. Cir. 2010) (vacating SEC rule regarding fixed index annuities for failure to consider the rule’s economic effects).

<sup>31</sup> 412 F.3d 133, 136 (D.C. Cir. 2005) (vacating SEC rule regarding independent directors on investment company boards for failure to consider costs and alternatives).

<sup>32</sup> *Bus. Roundtable*, 647 F.3d at 1148–49.

The court found that Rule 14a-11 was arbitrary and capricious on three basic grounds.<sup>33</sup> First, and most prominently, the court adjudged the SEC's analysis of costs and benefits to be insufficient.<sup>34</sup> The SEC underestimated the expenses that directors would incur campaigning against shareholder nominees because the Commission relied on projections with "no basis beyond mere speculation."<sup>35</sup> The SEC similarly erred when, to support its position that Rule 14a-11 would improve board performance and increase shareholder value, it "relied exclusively and heavily upon two relatively unpersuasive studies" instead of following "the numerous studies submitted by commenters that reached the opposite result."<sup>36</sup> The SEC's analysis also broke down when it explained that existing state law rights, not the SEC rules designed to enforce them, were to blame for potential costs: "[T]his type of reasoning, which fails to view a cost at the margin, is illogical and, in an economic analysis, unacceptable."<sup>37</sup>

Second, the court held that the SEC failed to consider properly how institutional investors like unions and pension funds might manipulate Rule 14a-11.<sup>38</sup> Such concerns pervaded corporate comment letters but were strenuously opposed by shareholder advocates.<sup>39</sup> Judge Ginsburg sympathized with the Business Roundtable's view of institutional investors, finding arbitrary action because, though "[t]he Commission did not completely ignore these potential costs, . . . it [did not] adequately address them."<sup>40</sup>

Third, the court criticized the SEC's projections of the frequency of election contests.<sup>41</sup> The Commission argued that its figures were correct, and that they applied only for purposes of the Paperwork Reduction Act,<sup>42</sup> but the court was not persuaded, declaring the estimates "internally inconsistent and therefore arbitrary."<sup>43</sup>

---

<sup>33</sup> *Id.*

<sup>34</sup> *Id.* at 1149-51.

<sup>35</sup> *Id.* at 1150. The SEC "did nothing to estimate and quantify the costs it expected companies to incur" even though "empirical evidence about expenditures in traditional proxy contests was readily available." *Id.*

<sup>36</sup> *Id.* at 1150-51.

<sup>37</sup> *Id.* at 1151.

<sup>38</sup> *Id.* at 1151-52.

<sup>39</sup> *Id.*

<sup>40</sup> *Id.* at 1152.

<sup>41</sup> *Id.* at 1152-54.

<sup>42</sup> Final Brief of the Securities and Exchange Commission at 42-43, *Bus. Roundtable*, 647 F.3d 1144 (No. 10-1305), 2011 WL 2014799, at \*42-43 (claiming that estimates for the Paperwork Reduction Act, 44 U.S.C. §§ 3501-3521 (2006 & Supp. IV 2011), designed to assess the burden of collecting and reporting information, did not have wide implications); *cf.* *Balt. Gas & Elec. Co. v. Natural Res. Def. Council, Inc.*, 462 U.S. 87, 105 (1983) (suggesting a faulty projection was not necessarily arbitrary and capricious if it was made for a limited purpose).

<sup>43</sup> *Bus. Roundtable*, 647 F.3d at 1153.

Beyond those three basic reasons, the court explained that the application of Rule 14a-11 to investment companies would have been separately arbitrary and capricious because it had been justified with “unutterably mindless” reasoning.<sup>44</sup> The court did not reach the First Amendment corporate speech challenge.<sup>45</sup>

In *Business Roundtable*, the D.C. Circuit waded into a political fight under the guise of dispassionate scientific oversight to vacate a proxy access rule produced after years of open, contentious debate. While statutes require the SEC to consider the consequences of its regulations,<sup>46</sup> courts should recognize the limitations of economics and of their own expertise by acknowledging thorough, competent analyses. Perpetuating *Business Roundtable*’s exacting review could impose a judicial blockade on complex financial rulemaking, which would impede regulators’ ability to police the marketplace in accordance with congressional intent.

Courts hardly outperform the SEC at evaluating the imperfect science of economics.<sup>47</sup> Judges can struggle with expert testimony in their own decisions,<sup>48</sup> and traditional training leaves most jurists ill-prepared to engage with sophisticated econometrics.<sup>49</sup> And the validity of economic analysis is cloudier than that of many other scientific methods because economic models rely on complex, interrelated assumptions.<sup>50</sup> Even practiced analysts struggle to isolate the impact of

---

<sup>44</sup> *Id.* at 1156. The SEC claimed that costs for investment companies would be incurred only if shareholder nominees won elections, an argument the court faulted as undercutting the rule’s basic rationale. *Id.* at 1155–56.

<sup>45</sup> *Id.* at 1156.

<sup>46</sup> See 15 U.S.C. §§ 78c(f), 78w(a)(2), 80a-2(c) (2006).

<sup>47</sup> In previous decisions, the D.C. Circuit has recognized expertise as a reason for deference. See, e.g., *Milk Indus. Found. v. Glickman*, 132 F.3d 1467, 1478 (D.C. Cir. 1998) (“Under the arbitrary and capricious standard of review, ‘an agency’s predictive judgments about areas that are within the agency’s field of discretion and expertise’ are entitled to ‘particularly deferential’ review, as long as they are reasonable.” (citations omitted) (quoting *Int’l Ladies’ Garment Workers’ Union v. Donovan*, 722 F.2d 795, 821 (D.C. Cir. 1983))).

<sup>48</sup> See *Daubert v. Merrell Dow Pharm., Inc.*, 509 U.S. 579, 599 (1993) (Rehnquist, C.J., concurring in part and dissenting in part) (“[The briefs here] deal with definitions of scientific knowledge, scientific method, scientific validity, and peer review — in short, matters far afield from the expertise of judges. . . . [T]he unusual subject matter should cause us to proceed with great caution in deciding more than we have to, because our reach can so easily exceed our grasp.”).

<sup>49</sup> See Patricia M. Wald, *Judicial Review: Talking Points*, 48 ADMIN. L. REV. 350, 352 (1996) (“[Q]uestions have been raised about whether we in the courts are competent to review the minutiae of risk or cost-benefit analysis. For most of us, the answer is no.”). See generally Patricia M. Wald, *Limits on the Use of Economic Analysis in Judicial Decisionmaking*, LAW & CONTEMP. PROBS., Autumn 1987, at 225.

<sup>50</sup> See generally JOSHUA D. ANGRIST & JÖRN-STEFFEN PISCHKE, *MOSTLY HARMLESS ECONOMETRICS* 4–7 (2009) (explaining the limits of econometric experimental design).

factors like proxy access,<sup>51</sup> and good-faith differences abound. Critics have little trouble singling out a controversial projection or a contentious source on either side of a reasoned debate. In such cases, it can be exceedingly difficult to distinguish principled from political nitpicking. Economic models rely on politically controversial assumptions: the numbers may look concrete, but their origins often are not.<sup>52</sup> Whether one believes that proxy access will improve corporate performance, for example, depends a great deal on one's political ideology.<sup>53</sup> In *Business Roundtable*, the court took aim at just such political judgments despite the judiciary's institutional limitations.<sup>54</sup>

Not surprisingly given the complexity of economic analysis, Judge Ginsburg's opinion made missteps similar to those for which he scolded the SEC. When the court faulted the SEC's discounting of potential costs of proxy fights without empirical evidence as "mere speculation,"<sup>55</sup> it mistakenly assumed that the Chamber of Commerce's economic arguments rested on firmer ground.<sup>56</sup> Pages later, the court, without empirical support, relied solely on a single, speculative sentence to criticize the SEC for failing to estimate the costs of union pension plans using proxy access as leverage in contract negotiations.<sup>57</sup>

<sup>51</sup> See generally Yair Listokin, *Interpreting Empirical Estimates of the Effect of Corporate Governance*, 10 AM. L. & ECON. REV. 90 (2008) (explaining the confounding effect of endogeneity problems on corporate governance analyses).

<sup>52</sup> Cf. Jerome Culp, *Judex Economicus*, 50 LAW & CONTEMP. PROBS., Autumn 1987, at 95, 96–100 (exploring the assumptions behind Judge Posner's law and economics analysis). See generally Kenneth G. Dau-Schmidt, *Relaxing Traditional Economic Assumptions and Values: Toward a New Multidisciplinary Discourse on Law*, 42 SYRACUSE L. REV. 181 (1991) (examining assumptions underlying "neoclassical efficiency analysis," *id.* at 182).

<sup>53</sup> See Joseph A. Grundfest, *The SEC's Proposed Proxy Access Rules: Politics, Economics, and the Law*, 65 BUS. LAW 361, 378 (2010) ("The proxy access debate is not an abstract academic controversy . . . . It is a knockdown, drag-out political brawl.").

<sup>54</sup> Cf. *Chevron U.S.A. Inc. v. Natural Res. Def. Council, Inc.*, 467 U.S. 837, 865 (1984) ("Judges are not experts in the field . . . Courts must [not] . . . reconcile competing political interests . . . on the basis of the judges' personal policy preferences."); *id.* (holding that the judiciary should defer to an agency interpretation because "the regulatory scheme is technical and complex, the agency considered the matter in a detailed and reasoned fashion, and the decision involves reconciling conflicting policies"); Thomas J. Miles & Cass R. Sunstein, *The Real World of Arbitrariness Review*, 75 U. CHI. L. REV. 761, 814 (2008) (presenting empirical findings "that in important domains, the hard look is hardened, or softened, by the political predilections of federal judges").

<sup>55</sup> *Bus. Roundtable*, 647 F.3d at 1150.

<sup>56</sup> See J. Robert Brown, Jr., *Shareholder Access and Uneconomic Economic Analysis: Business Roundtable v. SEC* 3–4 (Univ. of Denver Legal Studies Research Paper Series, Working Paper No. 11-14, 2011), available at <http://ssrn.com/abstract=1917451> ("The approach used by the court . . . incorrectly interpreted the board's fiduciary obligations . . . [and relied on a comment letter that] was based upon a faulty premise.").

<sup>57</sup> *Bus. Roundtable*, 647 F.3d at 1152 ("[S]tate governments and labor unions . . . often appear to be driven by concerns other than a desire to increase the economic performance of the companies in which they invest." (alteration in original) (quoting Leo E. Strine, Jr., *Toward a True Corporate Republic: A Traditionalist Response to Bebchuk's Solution for Improving Corporate America*,

Worse, in arguing that the SEC chose wrongly from conflicting studies about the effects of dissident directors on board performance,<sup>58</sup> the court simply chose the opposite side of a politically charged debate. Empirical evidence drawn from this very case suggests the court's error: markets preferred the 2010 proxy access rule, as shares of firms that would have been most affected lost value when the SEC stayed Rule 14a-11.<sup>59</sup>

These inconsistencies help demonstrate that no analysis of a politically contentious issue could survive *Business Roundtable's* exacting arbitrary and capricious review. Over the years, the D.C. Circuit has earned a reputation for rigorous review of agency action,<sup>60</sup> but its current approach sets the bar even higher. When costs and benefits are inestimable and projections differ, a panel could always vacate rule-making, and would be particularly likely to do so when the agency's political assumptions affront the court's sensibilities.

Such stringent oversight should be especially suspect when statutes suggest proregulatory congressional intent. Since Congress fell short of legislating Rule 14a-11, Dodd-Frank cannot be understood as fully endorsing the SEC's proposal.<sup>61</sup> Still, at the very least, Dodd-Frank's

---

119 HARV. L. REV. 1759, 1765 (2006)) (internal quotation marks omitted); see also Brown, *supra* note 56, at 5.

<sup>58</sup> *Bus. Roundtable*, 647 F.3d at 1150–51. Theoretical models relating proxy access to board performance are especially unscientific. See Bo Becker et al., *Does Shareholder Proxy Access Improve Firm Value? Evidence from the Business Roundtable Challenge* 12 (Harvard Bus. Sch., Working Paper No. 11-052, 2010) (“[Boards’ endogeneity] makes the effect of any board characteristic . . . impossible to identify based only on the observed correlation between that characteristic and firm performance.”) (citing Benjamin E. Hermalin & Michael S. Weisbach, *Endogenously Chosen Boards of Directors and Their Monitoring of the CEO*, 88 AM. ECON. REV. 96 (1998)), available at [http://papers.ssrn.com/sol3/papers.cfm?abstract\\_id=1695666](http://papers.ssrn.com/sol3/papers.cfm?abstract_id=1695666).

<sup>59</sup> Becker et al., *supra* note 58, at 4 (“Using a 1-day event window around October 4, 2010, we find that share prices of companies that would have been most exposed to shareholder access declined significantly compared to share prices of companies that would have been most insulated from the rule.”).

<sup>60</sup> See Peter L. Strauss, *Changing Times: The APA at Fifty*, 63 U. CHI. L. REV. 1389, 1407–09 (1996). The D.C. Circuit’s strict standards persist despite past corrections from the Supreme Court. See, e.g., *Balt. Gas & Elec. Co. v. Natural Res. Def. Council, Inc.*, 462 U.S. 87, 108 (1983) (finding the court’s scrutiny of a “minor ambiguity” to be “totally inappropriate”); *Vt. Yankee Nuclear Power Corp. v. Natural Res. Def. Council, Inc.*, 435 U.S. 519, 525 (1978) (concluding that the court “improperly intruded into the agency’s decisionmaking process”); see also Stephen Breyer, *Vermont Yankee and the Courts’ Role in the Nuclear Energy Controversy*, 91 HARV. L. REV. 1833, 1833 (1978) (“In the *Vermont Yankee* case, the Court of Appeals for the District of Columbia Circuit sought to require additional agency procedures [when dealing with a complex and important scientific or technical issue]. . . . The Supreme Court has reversed that approach, correctly so in my view . . .” (footnotes omitted)).

<sup>61</sup> See Dodd-Frank Act, Pub. L. No. 111-203 § 971(b), 124 Stat. 1376, 1915 (2010) (codified at 15 U.S.C. § 78n(a) (2006 & Supp. IV 2011)) (providing that the SEC “may” issue a proxy rule, but not requiring that it shall do so). But see Thomas Quaadman, *Dodd-Frank: Governance Issues Galore and Not Limited to Financial Institutions*, METROPOLITAN CORP. COUNS., Aug. 2010, at 18 (“Some have speculated that [Dodd-Frank’s] legislative grant of authority was given to try

grant of rulemaking authority contemplated the possibility of a proxy access rule.<sup>62</sup> But the strictness of the *Business Roundtable* standard of review ensured that the D.C. Circuit would only entrench the status quo.

The effects of this decision are troubling. The *Business Roundtable* ruling disrupts the SEC's ability to fulfill its statutory mandate to oversee the proxy process.<sup>63</sup> Many imagine *Business Roundtable* as the first domino to fall in the Dodd-Frank universe.<sup>64</sup> In an evolving financial climate, ossification of SEC regulations<sup>65</sup> may contribute to market failures that Congress designed Dodd-Frank to prevent.

Because the height of the *Business Roundtable* hurdle may prevent the SEC from demonstrating adequate analysis even after extraordinary efforts, Congress should guard desirable actions from excessive scrutiny. Congress could repeal the economic analysis requirement, or it could ensure that future legislation instructs courts to apply more deferential standards of review to particular regulations. Without such action, Congress may have to expend scarce resources enacting specific legislation absent a different judicial position.

The D.C. Circuit's hard-line application of economic review should change. Courts have little place joining political fights or parsing complex economic analyses. They should avoid using arbitrary and capricious review to impose unattainable standards that bar agency action.

---

and inoculate the SEC from a legal challenge.”); Becker et al., *supra* note 58, at 11 (“Congress’s authorization to the SEC under Section 971 of the Dodd-Frank was intended to largely shut down [the] kind of challenge [brought in *Business Roundtable*].”).

<sup>62</sup> See 156 CONG. REC. S5916 (daily ed. July 15, 2010) (statement of Sen. Jack Reed) (“[A]fter much dispute, the bill makes it clear that the SEC has the authority to grant shareholders proxy access to nominate directors.”); 156 CONG. REC. H5237 (daily ed. June 30, 2010) (statement of Rep. Paul Kanjorski) (“[The Dodd-Frank Act] clarifies the ability of the SEC to issue rules regarding the nomination by shareholders of individuals to serve on the boards of public companies. These provisions regarding proxy access will enhance democratic participation in corporate governance and give investors a greater voice in the companies that they own.”).

<sup>63</sup> Facilitating Shareholder Director Nominations, 74 Fed. Reg. 29,024, 29,025 (proposed June 18, 2009) (“Regulation of the proxy process and disclosure is a core function of the Commission . . . . Section 14(a) of the Exchange Act stemmed from a Congressional belief that ‘[f]air corporate suffrage is an important right that should attach to every equity security bought on a public exchange.’” (second alteration in original) (footnote omitted) (quoting H.R. REP. NO. 73-1383, at 14 (1934))).

<sup>64</sup> See, e.g., Ben Protes, *Court Ruling Offers Path to Challenge Dodd-Frank*, N.Y. TIMES DEALBOOK, Aug. 17, 2011, <http://dealbook.nytimes.com/2011/08/17/court-ruling-offers-path-to-challenge-dodd-frank>.

<sup>65</sup> See Kathryn A. Watts, *Proposing a Place for Politics in Arbitrary and Capricious Review*, 119 YALE L.J. 2, 41 (2009) (arguing that considering political factors during arbitrary and capricious review would help to mitigate the “ossification” problem); cf. Mark Seidenfeld, *Demystifying Deossification: Rethinking Recent Proposals to Modify Judicial Review of Notice and Comment Rulemaking*, 75 TEX. L. REV. 483, 492 (1997) (“From the agency’s perspective, hard look review has become an icy stare that freezes action; no matter how much care the agency believes it has given to a decision, the agency faces uncertainty about whether the reviewing court will find that the agency performed its decisionmaking task adequately.”).

**Date:** Friday, July 25, 2014 3:30:58 PM

---

Tim,

I enjoyed speaking with you today. As we discussed, here are the times that our staff are available for calls to talk about their comments on the draft general exemption and economic analysis.

General exemption: Tuesday 12-2 or 4:30 to 5:30; Wed. 12-1

Economic analysis: Tuesday 11:30-1:30 or after 4

Also I do not think that I have your direct phone number. Would you mind sending it to me?

Thanks,

Jen

Yes. Thanks. From the SEC's perspective, it is basically the same group as last time.

Hi, Jen. We would like to continue the discussion of "point of sale" disclosure this week. Thursday is not good, but Friday (9/19) between 12-3 is open for me. I am copying Treasury folks and others here in EBSA to see who wants to participate in the call and who is available on Friday. Thanks.

**Importance:** High

Thanks, Jen. I think it would be terrific if we could get another discussion of point of sale disclosures done this week and include the Treasury folks. Then, we could move on to the other topics next week when I'm back.

I've asked the head of our Office of Regulations and Interpretations, Joe Canary, to work with you on getting this set up. More generally, he's always a good person to talk to on this project! Joe's number is [REDACTED].

**Subject:** Calls to discuss fiduciary duty exemption

Tim,

My apologies for the delay getting back to you with proposed times to discuss point of sale disclosures, the low-fee safe harbor, and the general exemption outline. Since you are out of the office for the next several days, maybe we should try to schedule the point of sale disclosure discussion with DOL/Treasury staff first. I list below the days and times this week when our staff is available. Please let me know if there is someone else I should contact about scheduling this call while you are gone.

Thurs. (9/18) 11:30-12:30; 2-3:30

Fri. (9/19) 12-3

For the other two topics, the team is available the following days and times next week. Please let

me know what works for all of you.

Tues. (9/23) 9-10

Wed. (9/24) 9-12:30; 4-5

Thurs. (9/25) 9-10; 11-5

Fri. (9/26) 10-1; 3:30-5

Thanks,

**Jen Porter**  
Chair's Office

Joe and George,

Unfortunately, I just learned that I will probably have to be out of the office on Friday. Can we schedule the disclosures call for next week? Here are the times that work for our team:

Tues. (9/23) 9-10  
Wed. (9/24) 9-12:30; 4-5  
Thurs. (9/25) 9-10; 11-5  
Fri. (9/26) 10-1; 3:30-5

Thanks,  
Jen

**Subject:** RE: Calls to discuss fiduciary duty exemption

**Importance:** High

Thanks, Jen. I think it would be terrific if we could get another discussion of point of sale disclosures done this week and include the Treasury folks. Then, we could move on to the other topics next week when I’m back.

I’ve asked the head of our Office of Regulations and Interpretations, Joe Canary, to work with you on getting this set up. More generally, he’s always a good person to talk to on this project! Joe’s number is [REDACTED].

**Subject:** Calls to discuss fiduciary duty exemption

Tim,

My apologies for the delay getting back to you with proposed times to discuss point of sale disclosures, the low-fee safe harbor, and the general exemption outline. Since you are out of the office for the next several days, maybe we should try to schedule the point of sale disclosure discussion with DOL/Treasury staff first. I list below the days and times this week when our staff is available. Please let me know if there is someone else I should contact about scheduling this call while you are gone.

Thurs. (9/18) 11:30-12:30; 2-3:30

Fri. (9/19) 12-3

For the other two topics, the team is available the following days and times next week. Please let me know what works for all of you.

Tues. (9/23) 9-10

Wed. (9/24) 9-12:30; 4-5

Thurs. (9/25) 9-10; 11-5

Fri. (9/26) 10-1; 3:30-5

Thanks,

**Jen Porter**

Tim,

I enjoyed our meeting earlier today. It was great to put faces to names. I would like to schedule a call to discuss the disclosure and audit requirements under the federal securities laws. Due to vacation schedules this week, it looks like sometime next week is our best bet with everyone on the team. Are you free at any of the following times?

Tuesday Sept. 2 at 3 - 5  
Wednesday Sept. 3 at 1:30

Thursday Sept. 4 at 4-5

Also, following our conversation today, please let me know if it would be helpful for our economists to talk again about data and the economic analysis. I will be happy to set something up.

Thanks,

**Jen Porter**

**Cc:** Hauser, Timothy - EBSA  
**Subject:** Draft RIA -- Privileged and Confidential  
**Importance:** High

Jennifer, I've attached the draft regulatory impact analysis and technical appendix for our conflict of interest regulation. As mentioned in my voicemail, the documents are still works in progress and, of course, should be held close. But please feel free to circulate the documents to the appropriate people within the SEC, subject to an understanding that the documents and their contents should not be more broadly disclosed. In the past, I think Joe Piacentini, our chief economist, has worked with Jennifer Marietta-Westberg and Matthew Kozora, but I leave it to you whether they are the right people for these documents. Also, as I indicated on the phone, the regulatory impact analysis includes some discussion of the laws you enforce, and that discussion (which hasn't yet been scrubbed by our attorneys) would undoubtedly benefit from your expertise -- as, of course, would the rest of the documents and analyses. I very much appreciate your consistent willingness to help us with this project.

Have a great weekend.

Tim

## Introduction

This year marks the tenth edition of the Regulatory and Examinations Priorities Letter. Over the past decade, we have witnessed tremendous change to firms, markets and regulation.

Many changes have been positive. Firms have improved their review of new products by integrating business functions with independent perspectives, such as compliance and risk management, articulating standards, documenting decisions and monitoring product performance. Firms have taken steps to better manage conflicts of interest by aligning compensation more closely with customer interests or through risk-adjusted compensation.

The markets have become more transparent to retail investors with expanded trade report dissemination. FINRA took steps to enhance transparency in “dark pool” trading through the publication of reports on alternative trading systems’ volume on a stock-by-stock basis. Both equity and debt markets have become more open internationally, enabling companies to raise capital where it is most advantageous and investors to diversify their portfolios.

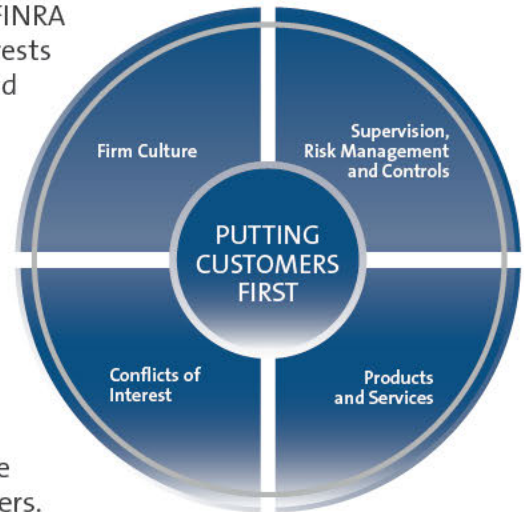

Regulators have adopted more risk-based approaches, increased their use of data and analytics, and improved coordination and information sharing. FINRA’s examination program is now substantially risk-based, enabling us to allocate our resources to higher-risk firms and individuals. For example, we identify registered representatives with higher risk profiles using analytics, resulting in expedited regulatory responses. FINRA is also sharing information more frequently with domestic and international securities and banking regulators, in particular with the U.S. Securities and Exchange Commission (SEC) and the Municipal Securities Rulemaking Board (MSRB).

## Recurring Challenges

In addition to the positive changes FINRA has observed, there are a number of lessons learned that firms can find instructive. Over the years, FINRA has observed that challenges in five areas contribute to firms and registered representatives at times compromising the quality of service they provide to customers as well as contribute to compliance and supervisory breakdowns. Addressing these challenges will enable firms to get ahead of many of the concerns that FINRA raises in this letter.

**Putting customer interests first:** A central failing FINRA has observed is firms not putting customers' interests first. The harm caused by this may be compounded when it involves vulnerable investors (*e.g.*, senior investors) or a major liquidity or wealth event in an investor's life (*e.g.*, an inheritance or Individual Retirement Account rollover). Poor advice and investments in these situations can have especially devastating and lasting consequences for the investor. Irrespective of whether a firm must meet a suitability or fiduciary standard, FINRA believes that firms best serve their customers—and reduce their regulatory risk—by putting customers' interests first. This requires the firm to align its interests with those of its customers.

**Firm culture:** Many of the problems we have observed in the financial services industry have their roots in firm culture. A poor culture may arise, for example, if firm management places undue emphasis on short-term profits or pursues rapid growth without a concomitant concern for controls. Beyond creating the proper business environment for a good culture to flourish, firms' boards and senior executives must articulate and practice high standards of ethical behavior that are expected and visible throughout the organization and are embedded in the firm's incentives. These standards should come from the board and executives and not be viewed as a compliance task. The absence of stated standards can contribute to failures at the individual broker level (*e.g.*, disregard for customer needs in recommending securities) and can likewise bring about problems with potentially market wide implications (*e.g.*, manipulation of indices or the manufacture and marketing of unsuitable securities). Firms must protect their culture against individual bad actors, as well as firm wide behaviors that can gradually erode that culture. Firm policies should signify that poor practices, whatever the magnitude of the harm caused or potential implications, will not be tolerated.

**Supervision, risk management and controls:** A firm's systems of supervision, risk management and controls are essential safeguards to protect and reinforce a firm's culture. Maintaining the right culture includes having robust processes around basic functions such as hiring. Strong supervisory and risk management systems also prevent inadvertent harm to customers (*e.g.*, a firm failing to provide the proper breakpoint), as well as defend against deliberate acts of malfeasance (*e.g.*, a trader concealing position limit breaches or an executive manipulating accounting balances to make the firm's financial status and results appear stronger than they are). Proactive supervisory programs and controls play a crucial role in this effort and many firms have turned to data analytics to help identify problematic behavior. One indicator that a firm is succeeding in a proactive approach would be that it has already identified and addressed the concerns FINRA identifies in this letter.

**Product and service offerings:** While firms have improved new-product review processes, the sales of novel products and services remain a regulatory flashpoint. Some of the issues that have caused harm to investors and landed firms in regulatory difficulties include product complexity, opacity in the market for a product or its underlying components, insufficient or generic disclosure, enticing teaser rate fee structures and insufficient training for salespersons to understand the products. These challenges underscore the need for firms to continue to conduct rigorous new product reviews, assess reasonable-basis and customer-specific suitability prior to offerings and permit wealth management to make independent decisions about the products and services that are best for their customers.

**Conflicts of interest:** Conflicts of interest are a contributing factor to many regulatory actions FINRA (and other regulators) have taken against firms and associated persons. In October 2013, FINRA highlighted effective practices in identifying and managing conflicts of interest. While we have observed positive change since we issued the [Report on Conflicts of Interest](#), FINRA has also recently announced enforcement actions involving firms' failure to adequately address conflicts of interest by offering favorable research in connection with potential investment banking business.<sup>1</sup> We are also reviewing situations where market access customers self-monitor and self-report suspicious trading despite this inherent conflict of interest. And, we continue to focus on fee and compensation structures that lie at the heart of many conflicts and which can at times compromise the objectivity registered representatives provide to customers. FINRA underscores the importance of firms moving to identify and mitigate conflicts of interest.

## Areas of Focus in 2015

FINRA's 2015 priorities focus on key sales practice, financial and operational and market integrity matters. Before discussing the priorities, we highlight an important issue that cuts across all of FINRA's regulatory programs. Specifically, FINRA has experienced an increasing number of situations where some firms have repeatedly failed to provide timely responses to its information requests made in connection with examinations and investigations. This is particularly troubling as FINRA discusses large and complex information requests with firms and is flexible with respect to due dates, rolling productions, scope and format—as long as the integrity of the regulatory matter is not compromised. These situations are not acceptable, as timely productions of information (as well as oral information through interviews and on-the-record testimony) are critical to FINRA achieving its investor protection and market integrity mission by identifying and shutting down bad practices and bad actors at the earliest possible time. FINRA reiterates firms' obligation to respond to FINRA inquiries in a full and timely fashion, and cautions firms that production failures expose firms to disciplinary action.

## Sales Practice

### Products

In this section, FINRA discusses product-focused concerns. These concerns may include features of the product itself as well as sales or distribution practices. Some of the products we address are complex and may be subject to substantial market, credit, liquidity or operational risks. In some cases, products previously available only to sophisticated investors have been modified and are now offered to retail investors. These products require firms and registered representatives to perform due diligence, make sound

suitability decisions and describe product risks in a balanced manner that retail investors can understand. As always, firms and registered representatives should be attentive to changing circumstances—such as the precipitous fall in oil prices or the rapid fall in some emerging and frontier market indices—that may affect suitability decisions and risk descriptions. Training registered representatives about product features, pricing and valuation, and providing guidance around suitability are important steps in meeting these challenges. With these concerns in mind, FINRA’s 2015 surveillance and examination activities that include product-related risk reviews will routinely focus on due diligence, suitability, disclosure, supervision and training.

#### *Interest Rate-Sensitive Fixed Income Securities*

The United States has experienced a period of sustained and unusually low interest rates. FINRA’s [2014 Regulatory and Examination Priorities letter](#) detailed FINRA’s concerns regarding the interest rate environment and the potential harm to customers holding interest rate-sensitive products that could result from shifts in that environment. Those concerns remain unchanged. FINRA also recognizes, however, that fixed income products play an important role in a well-constructed portfolio. What is critical is that firms’ communications discuss the impact of interest rate changes on price when marketing products that are interest rate sensitive. In 2015, FINRA examiners will look for concentrated positions in products that are highly sensitive to interest rates—such as long-duration fixed income securities, high yield bonds, mortgage-backed securities, or bond funds composed of interest rate-sensitive securities—and test for suitability and adequate disclosures. Examiners may also review firms’ efforts to educate registered representatives and customers about such products.

#### *Variable Annuities*

FINRA’s focus on sales practice issues with variable annuities—both new purchases and 1035 exchanges—will include assessments of compensation structures that may improperly incent the sale of variable annuities, the suitability of recommendations, statements made by registered representatives about these products and the adequacy of disclosures made about material features of variable annuities. FINRA examiners will also focus on the design and implementation of procedures and training by compliance and supervisory personnel to test the level of brokers’ and supervisors’ product knowledge, to prevent and detect problematic sales practices in variable annuities and to assess compliance with requirements that firms file retail communications concerning variable annuities with FINRA within 10 business days of first use. FINRA will particularly focus on the sale and marketing of “L share” annuities as these shares typically have shorter surrender periods, but higher costs.

#### *Alternative Mutual Funds*

Sales of alternative mutual funds (“alt funds” or “liquid alts”) have increased rapidly over the past several years, with hundreds of new funds launched and currently available. Estimates place assets under management in alternative funds at over \$300 billion as of November 2014, up from less than \$50 billion at year-end 2008. Net inflows for 2014 through November reportedly exceeded \$40 billion.<sup>2</sup>

Alternative mutual funds are often marketed as a way for retail customers to invest in sophisticated, actively-managed hedge fund-like strategies that will perform well in a variety of market environments. Alternative mutual funds generally purport to reduce volatility, increase diversification, and produce non-correlated returns and higher yields compared to traditional long-only equity and fixed-income funds, all while offering daily liquidity. There is no standard definition of alternative mutual funds, but if a fund's strategy involves non-traditional asset classes, non-traditional strategies or illiquid assets, the fund could be considered an alt fund. FINRA recommends firms refer to such funds based on their specific strategies, as opposed to bundling them under one umbrella category. In this regard, firms must ensure that their communications regarding alternative funds accurately and fairly describe how the products work, ensuring that the descriptions of the funds are consistent with the representations in the funds' prospectuses. For example, a retail communication that includes a discussion of an alternative fund's objectives that is inconsistent with the objectives included in the fund's prospectus, or that does not clearly indicate there is no assurance that the objectives will be met, would not meet regulatory requirements.<sup>3</sup>

Despite their possible benefits, alternative mutual funds raise concerns when compared to conventional funds. In particular, FINRA is concerned that registered representatives and customers will not understand how the funds will respond to various market conditions or even the strategy in which the fund's adviser will engage in various market scenarios. In addition, FINRA has learned that some firms are not reviewing alt funds through their new-product review process, especially if the firm already has an existing agreement with the fund company.

#### *Non-Traded Real Estate Investment Trusts (REITs)*

FINRA identified several concerns with non-traded REITs in last year's letter, including general lack of liquidity, high fees and valuation difficulty. FINRA had noted risks to investors who may be attracted to the projected yields of these securities.<sup>4</sup> These risks remain relevant with respect to customer-specific suitability obligations that firms must perform when recommending non-traded REITs to clients. FINRA also emphasizes that firms should perform due diligence on an ongoing basis on REITs they allow their representatives to recommend. "Red flags" arising from a REIT's financial statements or management may cause firms to change the types of clients to whom the firm recommends the product or even to discontinue sale of the product.

FINRA also notes that on October 10, 2014, the SEC approved proposed amendments to the Customer Account Statement Rule and the Direct Participation Program (DPP) Rule regarding how these products are valued on customer account statements.<sup>5</sup> Because the offering price, typically \$10 per share, often remains constant on customer account statements during the offering period even though various costs and fees have reduced investors' capital, FINRA amended the rule to require broker-dealers to provide a more accurate per share estimated value on customer account statements, as well as various important disclosures. Firms that sell REITs should read and understand the full requirements of the amendments in [Regulatory Notice 15-02](#), which also contains the effective date of the rule amendments.

### *Exchange-Traded Products (ETPs) Tracking Alternately Weighted Indices*

Indexing has continued to expand beyond traditional market capitalization-weighted methods to alternately weighted strategies, (e.g., using equally weighted, fundamentally weighted, volatility weighted indices).<sup>6</sup> These indices provide exposure to specific investment risk factors or strategies. Products tracking such indices may be marketed as providing superior risk-adjusted performance relative to products tracking more traditional capitalization-weighted indices. The exchange-traded products market, in particular, has seen significant growth in the use of alternately weighted indices in terms of products and investor assets.

For individual investors, products tracking these indices may be complex or unfamiliar. Moreover, ETPs tracking these indices may be thinly traded and have wide bid-ask spreads, making these funds more costly to trade, in addition to their generally higher expenses. Some alternately weighted indices may have significantly higher turnover than more traditional indices, leading to greater transaction costs for ETPs that track them. While back-tested results and some academic research have highlighted the potential efficacy and attractiveness of alternately weighted indices, it remains an open question how the indices and products tracking them will behave in different market environments going forward.

### *Structured Retail Products (SRPs)*

FINRA continues to see firms creating and distributing SRPs, including structured notes, with complex payout structures and using proprietary indices as reference assets. Complex features, long maturities, and linkages to less-traditional or less well-understood reference assets in some structured retail products may present investors with unique or unfamiliar risks. FINRA is concerned that some brokers and retail investors may not be familiar with the complexities of SRPs, compounded by the uncertain impact of a changing interest rate environment. FINRA reminds firms that retail communications concerning derivatives registered under the Securities Act of 1933, including SRPs, must be filed with FINRA within 10 business days of first use.

In addition, we are focused on the incentive to increase revenue from structured (and other) product sales through distribution channels that may not have adequate controls to protect customers' interests, such as the distribution of structured or complex products through retail distributors that have insufficient expertise to make sound suitability reviews. To mitigate the risk that sales incentives create, wholesalers should have robust Know-Your-Distributor policies and procedures reasonably designed to ensure potential distributors have adequate controls and systems in place. FINRA examiners will focus attention on additional conflict issues that might arise where the distributor and wholesaler are affiliated companies.

### *Floating-Rate Bank Loan Funds*

These products primarily invest in floating-rate bank loans. While such loans are typically geared to institutional investors, retail investors have increased their exposure to these products through mutual funds, closed-end funds and exchange-traded funds (ETFs) in an effort to protect against the threat of rising interest rates. Despite the promise of hedged exposure to interest-rate risk, these loans can carry significant credit and call risk.

In addition, they are difficult to value, have longer settlement times than other investments and are relatively illiquid. As a consequence, funds investing in these loans could face liquidity challenges if a significant number of investors make redemption requests at the same time.

### *Securities-Backed Lines of Credit (SBLOCs)*

SBLOCs are revolving, non-purpose loans that allow investors to borrow money from lending institutions using fully paid-for securities held in their brokerage accounts as collateral. FINRA has observed that the number of firms offering SBLOCs is increasing and is concerned about how they are marketed. They are now offered by a large number of firms and we see some clearing firms offering SBLOCs to retail investors via their correspondents. Proceeds are typically used to purchase a second home, luxury items or pay other expenses. Eligible securities collateralizing SBLOCs include stocks, bonds and mutual funds that are held in fully paid, cash accounts.

Broker-dealers offering SBLOCs should have proper controls in place to supervise these programs. Customers should be fully apprised of program features, including loan restrictions and how changing market conditions may affect their brokerage account and their ability to draw on the SBLOC. Moreover, firms should have operational procedures that enable them to interact with the lending institution to monitor the customer's account, keep adequate records and ensure that customers are promptly notified when collateral shortfalls occur.

### **Supervision Rules**

FINRA's new supervision rules (FINRA Rules 3110, 3120, 3150 and 3170) became effective on December 1, 2014.<sup>7</sup> These new rules modify requirements relating to, among other things: (1) supervising offices of supervisory jurisdiction and inspecting non-branch offices; (2) managing conflicts of interest in a firm's supervisory system; (3) performing risk-based review of correspondence and internal communications; (4) carrying out risk-based review of investment banking and securities transactions; (5) monitoring for insider trading, conducting internal investigations and reporting related information to FINRA; and (6) testing and verifying supervisory control procedures. FINRA regulatory coordinators and examiners will contact and inspect their assigned firms to address regulatory questions and become familiar with how the firms are implementing the new rule requirements.

### **Individual Retirement Account (IRA) Rollovers (and Other "Wealth Events")**

FINRA is focused on firms' controls around the handling of wealth events in investors' lives. Wealth events refer to those situations where an investor faces the decision about what to do with a large amount of money arising from an inheritance, life insurance payout, sale of a business or other major asset, divorce settlement or an IRA rollover, among other events. A broker's recommendations made in connection with a wealth event can have long-lasting consequences for the customer. In 2015, examiners will focus on the controls firms have in place related to wealth events, with an emphasis on firms' compliance with their supervisory, suitability and disclosure obligations. Firms' systems should be reasonably designed to help ensure that financial incentives to the associated person or the firm do not compromise the objectivity of suitability reviews.

Part of FINRA's focus will be IRAs, one of the principal vehicles Americans use to save for their retirement. According to the Investment Company Institute, over one-quarter of Americans' retirement savings are held in IRAs and this percentage is growing. Rollovers from employer plans—such as 401(k) plans—play an important role in funding these IRAs.<sup>8</sup> FINRA has stated that, whether in retail communications or an oral marketing campaign, it would be false and misleading to imply that a retiree's only choice, or only sound choice, is to roll over plan assets to an IRA sponsored by the broker-dealer.<sup>9</sup> Any communications that discuss IRA fees must be fair and balanced,<sup>10</sup> and the broker-dealer may not claim that its IRAs are “free” or carry “no fee” when the investor will incur costs related to the account, account investments or both.

If a broker-dealer does not intend for its registered representatives to recommend securities transactions as part of the IRA rollovers of their customers, then the broker-dealer should have policies, procedures, controls and training reasonably designed to ensure that no recommendation occurs. Similarly, if registered representatives are authorized to provide educational information only, a firm's written supervisory procedures should be reasonably designed to ensure that recommendations are not made. Without strong oversight, investors may not obtain the information necessary to make an informed decision, and firms may fail to detect recommendations otherwise prohibited by firm policy.

### **Excessive Trading and Concentration Controls**

FINRA has observed shortcomings in firms' supervision of quantitative suitability and concentration, for example, through the failure to supervise for compliance with issuer concentration guidelines (such as those contained in the prospectus for some REITs).<sup>11</sup> In 2015, FINRA examiners will focus on firms' supervisory processes, systems and controls concerning how firms monitor for excessive trading and product concentration. FINRA examiners will review the criteria for exception reports firms use and the adequacy of firms' follow-up on such exceptions. FINRA has provided firms with practices that may help bolster their supervision of suitability determinations.<sup>12</sup> FINRA examiners will also review customer communications and account activity to determine whether aggressive trading strategies were recommended, and whether broker-recommended transactions, or series of transactions, constitute excessive trading or result in a customer's portfolio becoming over-concentrated.

### **Private Placements**

Private placements continue to raise concerns and will be an area of focus in 2015. Broker-dealers participate in private offerings in a number of capacities, and common concerns across these capacities include inadequate due diligence and suitability analysis. These concerns remain relevant regardless of the investment sector, investment type (*e.g.*, EB-5 investment funds, pre-Initial Public Offering investment funds, virtual currency funds), or the type of investor. Firms must file most private placement materials with FINRA pursuant to Rules 5122 or 5123. FINRA reviews firms' private placements to determine whether broker-dealers performed sufficient due diligence on the issuer and the offering prior to recommendations to customers. We have learned that in some cases, the level of due diligence 1) did not comply with the broker-dealer's procedures, and 2) appeared to be inadequate to support a suitability determination. Furthermore, FINRA staff has identified offering documents and communications containing misrepresentations, omissions of material information or inconsistencies with FINRA's communication rules.

FINRA's review of private placement filings has also revealed a number of problems associated with contingency offerings and escrow procedures. Pursuant to Securities Exchange Act of 1934 (SEA) Rule 10b-9, a broker-dealer selling an offering pursuant to a contingency is required to return investor funds if the terms of the contingency are not met or have been materially amended. SEA Rule 15c2-4(b) requires broker-dealers to ensure that investor funds are properly segregated. In a number of instances, an offering's terms were amended and a rescission offer was not properly conducted. In other instances, broker-dealers participating in an offering with a contingency failed to either establish escrow procedures or had deficient procedures such as not employing an independent bank as the escrow agent.

FINRA also notes that amendments to Rule 506 of Regulation D<sup>13</sup>—which, pursuant to the Jumpstart Our Business Startups Act, became effective September 23, 2013—permit general solicitation and advertising when offering private placements, provided that all purchasers of the offering are accredited investors. FINRA and the SEC have reminded investors to be prudent when evaluating the risks of these types of investments, especially as, under the new rules, it is expected that investors will be more exposed to private placement sales pitches and advertising.<sup>14</sup>

### **High-Risk and Recidivist Brokers**

The activities of certain high-risk brokers cause outsized risk to investors, including the heightened potential to become a fraud victim. FINRA devotes substantial attention to brokers that may pose greater risk to the investing public and to quickly stopping those engaged in actual misconduct. To do this, FINRA is expanding its use of data mining, analytics, specially targeted examinations, and expedited investigations and enforcement actions to remove from the securities industry unscrupulous registered representatives who prey on investors.

Firms that hire or seek to hire high-risk brokers, including statutorily disqualified and recidivist brokers, can expect rigorous regulatory attention. FINRA will cover all aspects of this topic, including hiring and supervision practices. With respect to hiring, FINRA will review firms' due diligence on prospective hires. Examiners will also assess the supervision of high-risk registered representatives to determine whether it is tailored to specifically address the risks associated with the particular individual based on prior misconduct and regulatory disclosures. We will also assess whether a firm implements and documents a stated supervisory plan.

### **Sales Charge Discounts and Waivers**

FINRA has observed that in some instances customers do not receive the volume discounts (breakpoints) or sales charge waivers to which they are entitled when purchasing products like non-traded REITs, Unit Investment Trusts, Business Development Corporations and mutual funds.<sup>15</sup> FINRA addressed this issue through examinations and enforcement actions in the last few years and will make it a priority again in 2015. FINRA will determine if firms have an adequate system to ensure breakpoints and sales charge waivers are provided to their customers for products they sell that possess these features. Further, as some products offering volume discounts can have a direct impact on a broker's compensation, FINRA examiners will consider whether brokers disclose that the volume discount is available and make appropriate recommendations to customers.

## Senior Investors

The population of senior investors is large and growing; between 2012 and 2020, the number of Americans aged 65 or greater is projected to increase from 43 million to 56 million, and to 73 million by 2030.<sup>16</sup> The consequences of unsuitable investment advice can be particularly severe for this investor group since they rarely can replenish investment portfolios with fresh funds and lack time to make up losses. Reflecting concern about the treatment of senior investors, FINRA recently completed an examination initiative on senior issues. Preliminary findings show that many firms are increasingly proactive in dealing with senior investors by developing specific internal guidelines to strengthen suitability decisions and providing training on the needs of these investors, including, in some cases handling individuals experiencing diminished capacity or elder abuse. FINRA urges firms to review their procedures to identify ways they may be able to improve their treatment of senior investors. FINRA examiners will continue to review communications with seniors; the suitability of investment recommendations made to seniors, including with respect to the products discussed above; the training of registered representatives to handle senior-specific issues; and the supervision firms have in place to protect seniors. Firms that conduct seminars directed to senior investors must ensure that the presentations are fair, balanced and not misleading. Protecting senior investors also means compliance with requirements apart from the federal securities laws and FINRA rules that, for example, require reporting or the intervention of court-appointed guardians when elder abuse is detected.

## Anti-Money Laundering (AML)

FINRA will focus on certain types of accounts, including Cash Management Accounts (CMAs) and certain Delivery versus Payment/Receipt versus Payment (DVP/RVP) accounts. CMAs are brokerage accounts used for activity typically associated with bank accounts. FINRA will review the adequacy of firm surveillance systems and processes to identify potentially suspicious transfers to and from CMA accounts, and to verify the business purpose of activity conducted through these accounts. FINRA will also focus on DVP/RVP accounts of foreign financial institutions. FINRA has observed an increase in microcap activity and foreign currency conversion activity in DVP/RVP accounts, which may be based in jurisdictions with weak regulatory regimes. DVP/RVP accounts may provide less transparency as to the source of the shares being sold. FINRA has observed that some firms are not monitoring activity in DVP/RVP accounts for suspicious activity, and are not conducting adequate due diligence to ensure that securities being sold are registered under Section 5 of the Securities Act of 1933 or the transaction is subject to an exemption from registration.

FINRA examiners will also focus on the adequacy of firms' surveillance of customer trading. Firms should tailor customer trading surveillance around the AML risks inherent in their business lines, products and customer bases.<sup>17</sup> Customer trading activity can involve different types of suspicious activity reportable on Suspicious Activity Reports, including market manipulation, insider trading and microcap fraud. FINRA examiners will evaluate whether firms have systems to monitor for red flags indicative of suspicious customer trading activity. In fact, FINRA has found that firms' due diligence in microcap securities for AML and Section 5 compliance is at times inadequate, regardless of whether they receive shares from another broker-dealer or transfer agent, and whether in physical form or electronically. FINRA's continued emphasis on microcap fraud and insider trading is evident

through the more than 700 referrals to the SEC and other federal or state law enforcement agencies in 2014, involving potential fraudulent conduct through insider trading, private investment in public equity transactions, microcap fraud and market manipulation.

## **Municipal Advisors and Securities**

### *Municipal Advisor Registration*

In 2015, FINRA examiners will focus on current SEC and MSRB municipal advisor requirements, reviewing for proper application of exclusions and exemptions, and potential unregistered activity. Examiners will adjust their reviews to include new rules as they become effective.

In addition to statutory requirements promulgated under Dodd-Frank Act amendments to the SEA, the SEC's [municipal advisor registration rules](#) became effective July 1, 2014. FINRA has observed through onsite examination and regulatory coordinator outreach that some firms do not realize that the activities in which they engage subject them to municipal advisor registration requirements. Specifically, any firm that provides advice to customers that are municipal entities or obligated persons, whether with respect to an issuance of municipal securities or to the investment of proceeds from such an issuance (or municipal escrow investments) may be required to register as a municipal advisor. The SEC has published a [set of frequently asked questions](#) providing guidance about statutory exclusions and rule-based exemptions from the municipal advisor registration requirement. Further, the MSRB has developed a regulatory framework for municipal advisors and is currently developing municipal advisor rules regarding standards of conduct, supervision requirements, professional qualification requirements, pay-to-play, gifts and gratuities, and duties of solicitors.

### *Minimum Denomination Bonds*

In 2015, FINRA will focus on firms that sell municipal bonds in less than the minimum denomination, in violation of MSRB Rule G-15. Issuers often set high minimum denominations for lower-rated bonds that may make the investments inappropriate for retail investors. Investors who buy the bonds in smaller denominations may find limited liquidity, and thus poor pricing, when they choose to sell the bonds.

## **Financial and Operational Priorities**

### **Funding and Liquidity: Valuing Non-High-Quality Liquid Assets**

Broker-dealers need to develop and monitor funding and liquidity risk management programs. A cornerstone of any such programs is the accuracy of the price firms assign to securities. FINRA has observed that at times firms' funding and liquidity plans rely on being able to sell or enter into repurchase transactions at or very near to the prices at which the firms have marked their inventory to market. The issue of mark-to-market pricing is particularly acute with respect to infrequently traded positions in corporate, asset-backed and municipal debt securities. Accordingly, FINRA will examine for the integrity of marks-to-market for such securities and for supervisory controls surrounding the overall valuation process.

## **Sales to Customers Involving Tax-Exempt or Federal Deposit Insurance Corporation (FDIC)-Insured Products**

Firms that sell tax-exempt securities or FDIC-insured instruments, or products with similar characteristics, should be aware that in certain circumstances firm actions may cause customers to lose the tax-exempt status on interest payments or the FDIC protection they believe they have. These risks can arise if a firm is in a short position with respect to the security (e.g., if a firm sells more securities to customers than it has purchased or holds in inventory, or it has a fail-to-receive allocated to a customer position). In the case of tax-exempt securities, the short position creates a situation where a customer expecting tax-exempt income will, in fact, receive taxable “substitute interest” from the firm.

Similarly, for FDIC-insured certificates of deposit, the firm’s short position may create a situation where the customer’s certificate of deposit may be denied status as an insured deposit from the FDIC if the issuing bank or savings and loan association becomes insolvent. Thus, the customer is at risk with respect to both FDIC insurance and with respect to priority of his or her claim in the event of an insolvency of the issuing depository institution. FINRA will examine for the creation and resolution of such short positions, including compliance with the SEA Rule 15c3-3(d) possession or control requirements and the adequacy of supervisory processes in place for the expeditious resolution of these positions.

## **Cybersecurity**

FINRA examiners will review firms’ approaches to cybersecurity risk management, including their governance structures and processes for conducting risk assessments and addressing the output of those assessments. In January 2014, FINRA initiated a sweep to understand better the type of threats to which member firms are subject, as well as their responses to those threats. FINRA expects to publish the results of that sweep in early 2015. That report will include principles and effective practices firms should consider in developing and implementing their cybersecurity programs, for example, with respect to their overall approach to cybersecurity, the use of frameworks and standards, the role of risk assessments, the identification of critical assets, and the implementation of controls to protect those assets based on the scale and business model of the firm.

In addition, FINRA observes that recent events have highlighted the potential adverse consequences of cyber attacks that destroy data. In accordance with SEA Rule 17a-4(f), firms are permitted to store records electronically, provided that the media “(p)reserve the records exclusively in a non-rewriteable, non-erasable format.” In a 2003 Interpretation to SEA Rule 17a-4, the SEC noted that the rule does not specify the type of storage technology that may be used, but rather sets forth standards that the electronic storage media must meet to be considered an acceptable method of storage. In its 2003 interpretation, the SEC clarified that firms may use integrated hardware and software control codes to store data, provided “the electronic storage system prevents the overwriting, erasing or otherwise altering of a record during its required retention period.” Given the widespread use of electronic storage media for record storage and the fundamental importance of firms’ books and records to their ability to conduct business, a cyber attack that permanently destroys data may severely impact a firm’s ability to continue operating. In 2015, FINRA examiners will review firms’ approaches to ensuring compliance with Rule 17a-4(f) in the event of a cyber attack.

## Outsourcing

As firms continue to outsource key operational functions to reduce expenses and focus on core business activities, FINRA reminds firms that outsourcing covered activities in no way diminishes a broker-dealer's responsibility for 1) full compliance with all applicable federal securities laws and regulations, and FINRA and MSRB rules, and 2) supervising a service provider's performance.<sup>19</sup> Outsourcing will be a priority area of review during 2015 examinations, and will include an analysis of the due diligence and risk assessment firms perform on potential providers, as well as the supervision they implement for the outsourced activities and functions.

## Investor Protection Requires Timely Reporting of Disclosable Information

Through its BrokerCheck® and Central Registration Depository (CRD®) systems, FINRA provides comprehensive information on firms and associated persons as a key part of its investor protection mission. Investors, regulators and firms rely on this information and depend on it to be complete and accurate. Much of this information is derived from Form U4 and Form U5 registration filings. The FINRA By-Laws require that associated persons of member firms promptly disclose to FINRA reportable U4 and U5 events, including, but not limited to, regulatory actions, customer complaints, bankruptcy filings, liens, judgments and criminal charges.

Despite its importance, FINRA has found that in a number of instances firms do not report this information, or do not do so in a timely manner. FINRA is making changes to its registration review process, rules and examination program to address this noncompliance. This includes a public records review of all active registered persons. FINRA will continue this review process on a periodic basis for all registered persons.

In addition, FINRA has filed amendments to its Rule 3110 that requires firms to perform public records checks when registering associated persons to verify the accuracy and completeness of initial or transfer Form U4 filings. In 2015, FINRA examiners will review whether required disclosures are complete, accurate and made within the required time periods; determine whether firms have controls, processes and procedures in place to ensure timely filings; and determine whether public records reviews are occurring. Finally, FINRA expects firms to investigate representatives that fail to report appropriately.

## Market Integrity

Maintaining fair and orderly markets is a central objective for FINRA and is critical to restoring and preserving investor confidence in the U.S. capital markets. FINRA is adapting its surveillance program to identify potentially violative conduct made possible by advances in technology and changes in market structure, (*e.g.*, abusive algorithms). Firms also must be more vigilant in detecting and preventing misconduct. Firms are well positioned to serve as the first line of defense in identifying bad actors through, among other things, the analysis of market participants' activities on their systems.

## **Supervision and Governance Surrounding Trading Technology**

Maintaining a robust technology governance framework for electronic trading is a key responsibility for broker-dealers. FINRA has identified a number of concerns in this area, and in 2015, FINRA examination teams will review firms' technology and related controls with an emphasis on the development and ongoing supervision of algorithms. For example, FINRA examiners will review the adequacy of firms' formal supervisory processes—and related controls—for the development and testing of technology changes. Part of this review is a heightened focus on unscheduled trading technology changes that may not have benefitted from offline testing before handling live trades. FINRA examiners also will review the segregation of duties for technology staff performing various functions, namely, developing, testing, deploying, and modifying new and existing technologies. Examiners will also focus on firms' risk management and financial and operational controls, with a focus on firms' net capital, because the speed with which orders enter the market and are executed, often in numerous symbols on multiple markets, can introduce risk to the financial soundness of high-frequency trading firms.

## **Abusive Algorithms**

FINRA views abusive trading algorithms and deficient supervision for potential manipulation as among the most significant risks to the integrity of the markets. For that reason, FINRA will continue to pursue firms whose traders or customers use algorithms to manipulate the markets, including through layering, spoofing, wash sales and marking the close, among other means. In addition, FINRA will continue to further enhance its surveillance program to detect new types of potentially manipulative trading activity brought about through the use of abusive trading algorithms. FINRA will also continue to review whether firms' supervisory and other controls failed to appropriately detect abusive activity by the firm's traders or its customers.

## **Cross-Market and Cross-Product Manipulation**

Fragmented markets provide opportunities for market participants to disguise misconduct by trading in multiple markets. In 2015, FINRA will continue to enhance both its equities and options cross-market surveillance patterns. FINRA's cross-market surveillance now covers over 99 percent of the U.S. equity markets. Along with identifying potentially manipulative activity by single market participants on either a single or multiple markets, the cross-market surveillance patterns also identify potential relationship trading activity, that is, activity involving two or more market participants apparently acting in concert through one or more markets to engage in manipulative activity. These patterns mark a material step forward in promoting market integrity.

With the Chicago Board Options Exchange and C2 Options Exchange outsourcing most of their regulatory functions to FINRA starting in January 2015, FINRA will also now provide surveillance services to approximately 65 percent of the options market. As with equities, FINRA will continue to enhance its cross-market options surveillance capabilities in 2015 by addressing new threat scenarios.

In 2014, on behalf of some of FINRA's options exchange clients, FINRA also brought an action against a firm for cross-product manipulation. The case involved multiple instances of coordinated equity and options market activity designed to create momentary, artificial options prices that enabled the trader to purchase or sell options at more favorable prices. In 2015, FINRA plans to continue to expand its cross-product reviews and potentially bring additional actions.

## **Order Routing Practices, Best Execution and Disclosure**

Last year, FINRA began the process to assess whether trading-fee rebates create conflicts of interest that compromise the execution quality of customer orders. Specifically, FINRA is presently conducting a sweep of firms that route a significant percentage of their unmarketable customer limit orders to trading venues that provide the highest trading rebates for providing liquidity. The concern is that firms may receive inferior executions of their customers' unmarketable limit orders because of market movements during the pendency of the orders, while the firm still collects a trading rebate. As part of the sweep, FINRA is in the process of reviewing routing decisions for marketable versus non-marketable orders and how such decisions are impacted by rebates. While the review is ongoing, the assessment has revealed that some firms do not have active best execution committees or other supervisory structures in place to meet their obligation to regularly and rigorously evaluate the quality of customer order executions. We will use the knowledge of our 2014 efforts to enhance our approach in determining whether firms base routing decisions on benefits to the firms without thoroughly evaluating the potential conflicts presented and the quality of execution they receive for customer orders.

We have also seen evidence of firms failing to meet their duty of best execution in routing some customer options orders. We have initiated reviews of firms that appear to have ignored a better market on one options exchange to achieve a clean cross on another market. FINRA will continue to review whether options floor brokers meet their best execution obligations and conduct appropriate reviews of the execution quality they receive on their customers' behalf.

Regarding fixed income, the evolution of market structure and the related expansion in electronic trading of debt securities has contributed to firms having access to improved data and tools to evaluate best execution and mark-ups. In 2015, FINRA will increase its emphasis on reviewing firms' pricing practices, including whether firms have the supervision and controls in place to ensure they are using reasonable diligence and employing their market expertise to achieve best execution for their customers and avoiding excessive mark-ups (and mark-downs).

In addition, in our fair pricing reviews, we are looking for instances in which firms that are intermediating transactions in structured products may not have disclosed information to their customers about how they would charge the customer. Dealers that position a trade for the purpose of taking a spread when their customer has agreed to pay the dealer an explicit fee for the transaction, should look closely at whether they are meeting the customer's expectations about how the dealer should execute the trade and be compensated.

Lastly, starting in 2015, FINRA will launch a pilot program to conduct fixed income-based examinations focusing on trading issues, including related controls. As with other trading examination programs, the fixed income program will focus on areas that complement FINRA's surveillance program. Among other things, the fixed income examinations will focus on the operation of alternative trading systems trading fixed income instruments, books and records, supervision and order execution practices.

## Market Access

While the four years since the SEC adopted Rule 15c3-5 (the “Market Access Rule”) have seen improvements in firms’ risk management controls, we continue to find examples of firms’ inadequate market access controls in both the equities and options markets related to potential rules violations (*e.g.*, manipulation) and erroneous activity (*e.g.*, erroneous quotes). Similarly, we have observed confusion regarding the applicability of the Market Access Rule to the fixed income markets. We have frequently found that firms have not developed sufficient financial controls around fixed income market access with respect to principal trading activity.

FINRA recognizes the control challenges firms face when customers conduct potentially manipulative activity through multiple broker-dealers. Therefore, beginning in 2015, FINRA plans to commence a pilot program to leverage the relationship trading alert activity detected in its cross-market surveillance program to provide firms with information intended to supplement firms’ supervision efforts with respect to detecting and preventing manipulative trading activity.

## Audit Trail Integrity

FINRA will continue to focus on late reporting in TRACE-eligible and municipal securities that appears to result from inadequate processes and procedures on trading desks. In many cases, firms appear to report larger-sized trades up to several hours late. These delays in reporting potentially affect FINRA’s audit trail and its ability to assess whether a firm was at risk when executing a trade.

FINRA has created a new team to focus on identifying potential equity audit trail issues not typically detected through routine compliance sweeps and reviews. An important objective of this group is to resolve reporting errors promptly so that surveillance patterns can scan the most accurate data possible, reducing the risk of false alerts and potentially unnecessary inquiries to firms. The team looks at Order Audit Trail System, trade reporting and exchange audit trail data to identify potential reporting errors.

## Conclusion

FINRA urges firms to review their business in light of the concerns addressed in this letter. Serving the interests of the investing public and entities raising capital in a fair manner should be a guiding principle as firms pursue their business in 2015. It is also important for firms to stay current on new and existing priorities and developments as they arise throughout the year. As always, we urge you to contact your firm’s regulatory coordinator with specific questions or comments. In addition, if you have general comments regarding this letter or suggestions on how we can improve it, please send them to Daniel M. Sibears, Executive Vice President, at [dan.sibears@finra.org](mailto:dan.sibears@finra.org).

---

Thanks, Sharon. I was very nice to meet you.

During our meeting Mary Jo mentioned to the Secretary that FINRA recently issued its Regulatory Examinations Priorities Letter and the letter had a reference to FINRA's perspective on interests of a client. It is a small reference, but an interesting one. I have attached the letter and I have highlighted the section on page 2. I was hoping you could pass this on to the Secretary, if you think he would be interested in looking at this.

I hope you have a nice weekend.

Lona – It was great to finally meet you in person this week. Following up on our bosses' conversation, attached please find a chart that details the most recent comments on the draft that we've received from Jen Porter and her team and our responses. I've copied Tim Hauser, who leads our reg drafting team and who has been working with Jen, in case Jen has any follow up questions. Thanks, Sharon

Tim,

Our staff is available for a call on Thursday from 2:30-4. We plan to have the whole team, including our economists. Hopefully we can cover everything in an hour and a half, but if we need additional time we can make ourselves available on Friday or early next week.

Please let me know if this works for you, and feel free to give me a call if you want to discuss anything further.

Thanks,  
Jen

The 14<sup>th</sup> turns out (of course) to be a bad day for one of our participants that I would really like to attend. I've checked with everybody here, and the 17th would work for everybody. Is there any possibility of moving the meeting to the 17th? If not, let's leave it on the 14<sup>th</sup> and somebody will just have to cover for my colleague. Sorry for the difficulties – no doubt, I'm one of the world's worst schedulers.

**Subject:** meeting with SEC

Tim,

How about 4/29 at 12:30-1:30 p.m.? We've been having difficulty finding a good meeting time that is about two weeks away.

If this doesn't work, we'll keep looking.

Best,

Lourdes

Tim,

I just wanted to follow up with you to see if the time below would work on your end.

Thanks.

---

Tim,

Could you check to see if the below time would work on your end? It is a little far out but hopefully it can work.

Tuesday May 14 1-4:00 (select whichever hour works best)

Everybody could attend, except the head of EBSA's regulations division – he really should be there. Is there another date that might work?

These scheduling things are always a nightmare. Sorry to inflict it on you!

Thanks. On our end, I expect that Bill Taylor and I will attend from the Solicitor's Office; Lou Campagna and Fred Wong from EBSA's Office of Regulations and Interpretations; Lyssa Hall and Karen Lloyd from EBSA's Office of Exemptions and Determinations; and Chris Cosby (and possibly one other person) from EBSA's Office of Policy and Research.

Chris, do you expect anybody else to attend from your office? If so, could you send a note to Brian and cc me?

Tim

Tim, will anyone else be joining you? If so, can you please send me their names as well so I can let security know?  
Thank you.

Great. No trick to getting in - just be sure you have ID. And you can give them Brian Baltz's name. His phone number is [REDACTED]

We look forward to seeing you on Wednesday.

Thanks for following up, Tim. I didn't realize there were loose ends regarding arrangements.

We'd be grateful if we could have the meeting at our office, given the number of people here who are interested. It looks like Lourdes set aside 2 hours to meet - either 10-12 or 10:30-12:30 on Wednesday - whichever would work best for you.

Hi Tim,

I'm sorry but I have a family emergency so I will miss our meeting next week. Any of my colleagues whom I've cc'd on this email will be able to finalize scheduling it for next week and they will participate for Trading and Markets as well.

I hope to catch up soon.

Best,

Lourdes

Thanks. On our end, I expect that Bill Taylor and I will attend from the Solicitor's Office; Lou Campagna and Fred Wong from EBSA's Office of Regulations and Interpretations; Lyssa Hall and Karen Lloyd from EBSA's Office of Exemptions and Determinations; and Chris Cosby (and possibly one other person) from EBSA's Office of Policy and Research.

Chris, do you expect anybody else to attend from your office? If so, could you send a note to Brian and cc me?

Tim

Does that mean you're bringing 15 people? If so, I'll try to get a little bigger conference room than I had lined up. If you could send me everybody's names and titles, maybe (no promises) we can make the security clearance process a little easier. Could you talk around 5:00 or 5:30 today? If that's too late, how about between 8:30 and 9:45 tomorrow? Look forward to seeing you, as always.

Tim,

Thanks for your voicemail from Tuesday. Looking at April 2, 3 and 4, the time that would work best for us is April 3 at 11:00 a.m. I've put a hold on the calendars of our relevant people for that time. Does that work for your team? If not, the afternoon of April 3 also looks pretty good for us.

Thanks,

Jennifer

**Subject:** RE: Possible Time to Meeting

Jennifer, I have a doctor's appointment in the morning. Could we set it up for that afternoon? We'd be happy to come there, assuming we can find an afternoon time that works.

Also, I'm hoping the primary focus can be on the regulatory impact analysis that we sent to you. Does that make sense?

Tim,

I've canvassed a core group of our staff for Feb. 26 and 28, and a meeting on Feb. 28 from 10:30 to 11:30 would work well for us. How does that look on your end? Also, would you be willing to meet at the SEC?

Thanks,

Jennifer

Tim,

I enjoyed speaking with you today. As we discussed, here are the times that our staff are available for calls to talk about their comments on the draft general exemption and economic analysis.

General exemption: Tuesday 12-2 or 4:30 to 5:30; Wed. 12-1  
Economic analysis: Tuesday 11:30-1:30 or after 4

Also I do not think that I have your direct phone number. Would you mind sending it to me?

Thanks,  
Jen

I enjoyed speaking with you today. As we discussed, here are the times that our staff are available for calls to talk about their comments on the draft general exemption and economic analysis.

General exemption: Tuesday 12-2 or 4:30 to 5:30; Wed. 12-1

Economic analysis: Tuesday 11:30-1:30 or after 4

Also I do not think that I have your direct phone number. Would you mind sending it to me?

Thanks,  
Jen

Attached are copies of the regulatory impact analysis and technical appendix (which you already have), as well as the latest drafts of the "global exemption," an exemption for principal transactions, and an additional proposed exemption whose working title is "streamlined exemption for certain investments." While we expect Friday's conversation to focus on the impact analysis, I thought it would be helpful to give you a few more of the pieces of our project. As always, these are close-holds that shouldn't leave the SEC.

Here are the folks I expect to bring along with me: Joe Piacentini, Chris Cosby, and Keith Bergstresser from our Office of Policy and Research; Joe Canary from the Office of Regulations and Interpretations; Lyssa Hall, Karen Lloyd, and Brian Shiker from the Office of Exemption Determinations; and Judy Mares, Phyllis' other Deputy.

I'm looking forward to seeing you.

Tim

**Subject:** Friday SEC Meeting

Our meeting with Jennifer McHugh and other SEC staffers is set for 2:00 Friday at the SEC. The SEC already has the RIA and technical appendix, but I'm recirculating the documents to make sure we all have the same versions that they will be working from. In addition, I've attached the most recent draft global and principal transaction exemptions, which I plan to send them early this afternoon.

Please let me know if you think there's anything else I should be passing along, or if you have any objection to my passing along these materials.

So far, the list of DOL attendees includes Joe P, Joe C, Judy, Lyssa, Karen, Brian, Uchenna, and me. Please let me know who else is attending from your offices so that I can send a list to Jennifer in the next couple of hours.

The conversation will focus on the RIA, so it would be helpful if Joe P could prepare a tentative agenda focused on the RIA. I don't expect that we will get to the exemptions, except in the context of the RIA.

I left you two of my rambling disorganized phone mails, but thought I'd follow up with an email. Our chief economist is trying to put together a bit of an agenda for the meeting, and thought it would be helpful to get a sense of the extent to which people have gone through the regulatory impact analysis in detail. In other words, should he plan to do a bit of a walk-through, or will people already be very familiar with the material? Also, if you get a chance, could you let me know who plans to attend.

Thanks. Look forward to seeing you.

**Subject:** Friday SEC Meeting

Our meeting with Jennifer McHugh and other SEC staffers is set for 2:00 Friday at the SEC. The SEC already has the RIA and technical appendix, but I'm recirculating the documents to make sure we all have the same versions that they will be working from. In addition, I've attached the most recent draft global and principal transaction exemptions, which I plan to send them early this afternoon.

Please let me know if you think there's anything else I should be passing along, or if you have any objection to my passing along these materials.

So far, the list of DOL attendees includes Joe P, Joe C, Judy, Lyssa, Karen, Brian, Uchenna, and me.

Please let me know who else is attending from your offices so that I can send a list to Jennifer in the next couple of hours.

The conversation will focus on the RIA, so it would be helpful if Joe P could prepare a tentative agenda focused on the RIA. I don't expect that we will get to the exemptions, except in the context of the RIA.

Attached are copies of the regulatory impact analysis and technical appendix (which you already have), as well as the latest drafts of the “global exemption,” an exemption for principal transactions, and an additional proposed exemption whose working title is “streamlined exemption for certain investments.” While we expect Friday’s conversation to focus on the impact analysis, I thought it would be helpful to give you a few more of the pieces of our project. As always, these are close-holds that shouldn’t leave the SEC.

Here are the folks I expect to bring along with me: Joe Piacentini, Chris Cosby, and Keith Bergstresser from our Office of Policy and Research; Joe Canary from the Office of Regulations and Interpretations; Lyssa Hall, Karen Lloyd, and Brian Shiker from the Office of Exemption Determinations; and Judy Mares, Phyllis’ other Deputy.

I’m looking forward to seeing you.

Tim

I left you two of my rambling disorganized phone mails, but thought I'd follow up with an email. Our chief economist is trying to put together a bit of an agenda for the meeting, and thought it would be helpful to get a sense of the extent to which people have gone through the regulatory impact analysis in detail. In other words, should he plan to do a bit of a walk-through, or will people already be very familiar with the material? Also, if you get a chance, could you let me know who plans to attend.

Thanks. Look forward to seeing you.

Susan and Sandi: Based on responses here so far, September 24 is looking like the best date for us, but I am still waiting for some people to respond. We have had a few additions to the possible topic list. Here is the expanded list.

Possible Topics:

- (1) Extending the current MOU and possibility expanding it to include other federal agencies that have been important partners in our more recent inter-agency coordination efforts, for example the CFTC
- (2) Fiduciary regulation / project
- (3) TDFs
- (4) SEC advertising rules and participant disclosures under our lifetime income initiative
- (5) Guidance on investing in hedge funds
- (6) Dodd Frank issues regarding swap transactions
- (7) Benchmarking issues
- (8) Participant/investor assistance and outreach
- (9) PCAOB's inspection program
- (10) Sharing with EBSA of SEC Training that SEC tapes and distributes to its field offices
- (11) Access to hedge fund data on the SEC's Form PF

**To:** Nash, Susan  
**Cc:** Turner, Jeffrey - EBSA [REDACTED] [@dol.gov](mailto:[REDACTED]@dol.gov)>; Hult, Sandra M.  
**Subject:** RE: SEC/EBSA Staff Meetings

Susan and Sandi:

I am checking on the following dates/times here. I will let you know early next week about the best options for us.

September 21 at 1pm, 2pm or 3pm  
September 24 at 10am or 11am.  
September 26 at 1pm, 2pm or 3pm.  
September 27 at 11am or 3pm.

I have advised people here that my expectation is that the meeting will be scheduled for 1 hour, but may run over to 90 minutes (especially the first meeting). I have also said we will be developing an agenda and attendee list for the meeting, and noted the following as possible topics: (1) extending the current MOU and possibility expanding it to include other federal agencies that have been important partners in our more recent inter-agency coordination efforts, for example the CFTC; (2) the fiduciary reg project; (3) TDFs; (4) SEC advertising rules and participant disclosures under our lifetime income initiative; (5) guidance on investing in hedge funds; and (6) Dodd Frank issues regarding swap transactions. A copy of the current MOU is attached for your information.

I was asked whether you expect offices other than the Division of Investment Management will be participating?

Hi Tim:

I imagine others have forwarded it to you, but my boss, David Blass, wanted to be sure you and our other colleagues at DoL saw the Commission's just issued fiduciary / harmonization request for data. It is at this link:

<http://www.sec.gov/rules/other/2013/34-69013.pdf>

I hope all is well. I'd love to catch up with you sometime.

Best,

Lourdes

Tim,

I enjoyed our meeting earlier today. It was great to put faces to names. I would like to schedule a call to discuss the disclosure and audit requirements under the federal securities laws. Due to vacation schedules this week, it looks like sometime next week is our best bet with everyone on the team. Are you free at any of the following times?

Tuesday Sept. 2 at 3 - 5

Wednesday Sept. 3 at 1:30

Thursday Sept. 4 at 4-5

Also, following our conversation today, please let me know if it would be helpful for our economists to talk again about data and the economic analysis. I will be happy to set something up.

Thanks,

Thanks for the voice mail. I'm glad to hear that you already have the background document.

Phyllis would like to meet with Chairman Walter if that's possible. If you could let me know the contact information for the SEC folks we should contact, I'll pass the information on to my EBSA colleagues so they can set something up.

If you would like to pass the information on to the person responsible for Ch. Walter's schedule, it looks like Phyllis has the following times and dates available in the next few weeks if any of these slots work on your end.

3/25: 10 am-noon, 3-5 pm

3/27: 10am-noon

3/28: 9:30-11:30 am, 2:30-5pm

Thanks again for all your help!

Tim

**Subject:** "Goldman flap underscores fiduciary issue"  
**Date:** Monday, March 19, 2012 10:55:24 AM

---

Just FYI.

# Goldman flap underscores fiduciary issue

**By Darla Mercado**

March 18, 2012

When midlevel Goldman Sachs executive Greg Smith blasted his firm publicly last week for what he deems its rapacious behavior toward corporate and institutional clients, many retail advisers whose résumés include wirehouse stints nodded in recognition.

His New York Times Op-Ed piece struck an emotional chord with many of them who recalled relentless sales pressure.

“During the last 30 days that I worked at a brokerage firm, I received 25 e-mails from my branch manager on why every one of my clients needed to have [some] new proprietary mutual fund,” said Bob Rall, a fee-only adviser at Rall Capital Management and a veteran of Prudential Securities Inc.

“Everything was about the YTB on the product — the yield to the broker — not the yield to the client,” he said.

Russell G. Thornton, a vice president at Wealthcare Capital Management Inc. and a Merrill Lynch alumnus, agrees.

“Within the commission and sales environment of the wirehouse world, the general operating principle is: “How can I sell the most stuff to my clients?”” he said.

Although Mr. Smith's frame of reference reflects the institutional market, some advisers hope that his Op-Ed will be a wake-up call for clients, getting them to demand better quality of service they receive from advisers.

“One thing this ... will certainly do is make the idea of a client-first duty of care harder to ignore,” said Michael Branham, an adviser at Cornerstone Wealth Advisors Inc. and 2012 president-elect of the Financial Planning Association.

“Regardless of your legal obligation, it makes business sense to put the client's interests first,” he said. “Whether it's [The Goldman Sachs Group Inc.] or a small independent broker-dealer, that's what clients are really asking for.”

Some of the media coverage declared that advisers' true loyalties are to themselves and their firms, not their clients.

"A blazing resignation at Goldman Sachs shows us once again that financial advisers too often put their own interests first," blared a sub-headline in an article posted last week on Time magazine's website.

Some advisers think that they are far enough from Wall Street so that the Op-Ed won't spur clients to question their commitment.

But others said that all the attention the Op-Ed generated only made a stronger case for highlighting the distinction between advice from a fiduciary and product information from a sales representative. If anything, it gives the public a hint of the battle brewing in Washington over from whom a fiduciary standard of care should be required.

"I think clients want to know that whoever is working with them has their interests at heart, and that there's more loyalty to the client than to the firm," said Susan John, chairwoman of the National Association of Personal Financial Advisors.

"In the world of Greg Smith, the affected clients are institutional and presumed sophisticated — they should know and understand the rules of the game," said William L. McCollum, a portfolio manager and chief compliance officer at Eagle Financial Management Services LLC.

"To the retail client, the revelation of conflicts of interest may come as a surprise: They have been misled to believe that their interests come first, when in most cases, there exists no fiduciary relationship," he said.

"These firms and their representatives should not pretend to be something they are not," Mr. McCollum said.

But other advisers think that the basic tenet of doing what is best for the client transcends business models. In other words, fee-only service arrangements aren't the only way to do right by the customer, because bad apples can turn up among those advisers, as well.

"The whole fiduciary thing has been blown out of proportion, and ultimately it boils down to trusting someone," said Mr. Thornton, who describes his fee-only business model as "not better, but different" from his previous commission-based work.

"There were people I didn't like and didn't trust at Merrill, but I also know fee-only people who I don't truly trust or understand. Bernie Madoff should have been a fiduciary, and he was the worst." Mr. Thornton said.

"If you do what's best for the client, you still make money — but that's long-term, as opposed to short-term," said Rick Peterbok, chief executive of Interactive Financial Advisors, a dually registered firm. "If you do more to help the client, the rest will be OK."

Lou and Fred,

Here is the story I mentioned about the 401(k) advice study.

Thanks,

Jennifer

**Jennifer B. McHugh**

Senior Advisor to the Chairman

U.S. Securities and Exchange Commission

• NOVEMBER 7, 2011

RETIREMENT SAVINGS

Thanks but No Thanks on 401(k) Advice

An increasing number of plans offer outside help, typically for a fee. So far, most participants aren't buying in.

By [KAREN BLUMENTHAL](#)

Amid volatile markets and concerns about how workers are investing their retirement savings, more 401(k) plans are offering participants specific investment advice and even automatic account management to make investing decisions easier.

More employers are offering 401(k) investors access to outside portfolio advice. We look at [whether these services are catching on](#) and whether they are worth it.

That should be a good thing: Survey after survey shows that formal advice leads investors to increase their savings, diversify their holdings and continue holding stocks even when the market takes a plunge.

But here's the catch: Only about a quarter of the people who have access to advice through their retirement plans actually take advantage of it, according to retirement-plan providers and firms that provide advice services. And most of those who do use advisory services neglect to provide the personal details that would make the advice more valuable.

For many years, 401(k) and similar plans offered mostly education and "guidance," such as brochures, seminars and worksheets that gave employees generic suggestions about how to manage their accounts. Providing advice goes much further, offering specific recommendations about how much to invest in specific funds in your plan.

Janusz Kapusta

It also carries a fiduciary responsibility, or a requirement to put investors' interests first. Because of that, most advice services are offered by a company other than the investment firm that provides the 401(k) plan's fund offerings.

A recent survey of 820 profit-sharing and 401(k) plans by the nonprofit Plan Sponsor Council of America found that 58% offered investment advice in 2010, most commonly online services, one-on-one counseling and telephone hot lines. That was up from 47% of firms surveyed in 2005. Just over a third of the plans offered professional account management, up from 24% in 2005.

Among large companies, 74% now offer advice or managed accounts to plan participants, up from 50% in 2009, says benefits consultant Aon Hewitt.

Consultants and advice providers say more retirement plans are offering such services in part because recent market volatility has left many people unsure of what to do. "When times are tough, there's a bigger demand for advice," says Chris Lyon, partner at Rocaton Investment Advisors LLC, a Norwalk, Conn., investment-consulting firm.

In addition, as companies continue to shift to 401(k) plans from pension plans, it has become more apparent that many employees are ill-equipped to manage their own money. They may make costly decisions, such as moving out of stocks only after the market has tanked. Many older investors are too heavily invested in stocks or worse, their own company's stock, while some young workers avoid stocks altogether.

Poor investment decisions aren't tied to specific jobs or salaries, says Sue Walton, senior investment consultant for Towers Watson, a consulting firm. She says she's seen manufacturing companies where "some of the folks on the line make more savvy decisions than those in the executive suite."

If you are comfortable studying the various funds in your company plan, assessing the funds' expenses, building a diversified mix of choices and tweaking your choices once a year or so, you probably don't need advice. But for those who are less sure, here's a rundown of what's available:

**Managed accounts.** In most managed accounts, a professional money manager creates and monitors a customized investment portfolio for clients, usually wealthy investors, often for a fee of 1% or more of the assets under management. A managed account for a 401(k), by contrast, is limited to the investment options offered in the plan.

## Using 401(k) Help

Averages based on 425,000 people in eight 401(k) plans that offer both managed accounts and online advice

### ◆ Managed accounts

Age: 48.2 years

Account balance: \$66,202

Salary: \$55,457

Contributions: 6.9% of pay

### ◆ Online advice

Age: 40.9 years

Account balance: \$106,293

Salary: \$80,289

Contributions: 8.4% of pay

### ◆ Don't use help

Age: 45.4 years

Account balance: \$64,525

Salary: \$53,406

Contributions: 6.3% of pay

Source: "Help in Defined Contribution Plans: 2006 through 2010" by Financial Engines and Aon Hewitt

Typically, a sophisticated computer program considers your age and pay, expected retirement date, the size of your 401(k) and your contributions and then selects an appropriate allocation. The account is regularly rebalanced and adjusted as you age or when plan choices or market conditions change.

While a few plans pick up the cost of managed accounts, most people will pay fees of 0.2% to 0.6% of assets a year, or \$20 to \$60 for each \$10,000 invested, depending on how much is invested and what the company has negotiated. It's basically the equivalent of a personal trainer or a medically monitored diet for your retirement plan.

[Financial Engines](#) Inc., which provides advice to participants of 445 mostly large plans, says that about a half-million plan participants with almost \$44 billion in assets use its managed accounts, often those nearing retirement. [Morningstar](#) Inc.'s Investment Management division, which offers advice to about 150,000 plans, many of them small, manages the accounts of about 746,000 people with about \$19 billion in assets.

The service is most effective when it is truly customized. To get that, participants are asked to provide data about their investments outside the plan, such as other savings, old 401(k) plans or IRAs, and a spouse's earnings and retirement accounts. The problem is, most people don't provide all of that detail. And without it, "you're not going to get what you pay for," says Ms. Walton.

One-on-one help. If you want to manage your own account, you still may have the option of sitting down with an adviser or talking with someone on the phone who will consider your individual situation and help you create a plan. It will be up to you, however, to actually make the changes to your account and monitor it in the future.

TIAA-CREF, which provides plans to 15,000 institutions with 3.7 million participants, offers such counseling at no charge. It has 400 people based in local offices, an additional 200 who visit institutions where it offers plans and about 100 phone reps to provide such guidance.

People who take advantage of that one-on-one help are more likely to make positive changes in their savings or portfolios. Still, says James Nichols, a vice president who oversees TIAA-CREF's advice and planning, "one of the challenges is getting people to stay on track," especially as they age and their situations change.

Internet services. The widely available and free do-it-yourself service, where you plug your information into an online program offered by

your plan and get recommendations back, is also the least used, according to a recent study by Financial Engines and Aon Hewitt, which looked at how participants in eight plans fared between 2006 and 2010. More than twice as many participants in the plans used managed accounts as used online services.

The investors most likely to go online and put in the effort to get recommendations typically had higher earnings, saved a higher percentage of their pay and had larger balances than those who used managed accounts. They also tended to be a bit younger than the managed-account users.

The general lack of interest in taking advantage of easily accessible online services underscores how hard it is to get participants to think about and put some effort into their 401(k) investments.

"A large portion of participants are reluctant investors," says Christopher Jones, chief investment officer at Financial Engines. Retirement investing "is down on the priority list—people don't have the time for it, or the inclination."

I hope this report doesn't give either of you heartburn either. Maybe I shouldn't speak publicly anymore.

#### Prohibited Transactions

DOL Officials Address Role of Exemptions Under Definition of Fiduciary Proposal

The Department of Labor will still provide prohibited transaction exemptions for certain practices of investment advice fiduciaries, but many existing exemptions will need to be reviewed after the department updates its regulation on the definition of a fiduciary, a DOL official said April 5 at a program sponsored by the Practising Law Institute.

"When the regulation is finalized, a lot of those exemptions will need to be massaged," said Ivan Strasfeld, director of the Office of Exemption Determinations at the department's Employee Benefits Security Administration. "The reality is, they're old. They're from 1975, and they've been virtually unchanged," Strasfeld said.

Another DOL official speaking at the PLI event emphasized the role that he expected prohibited transaction exemptions would play in regulating individual retirement accounts under DOL's fiduciary regulation.

The primary reason for including IRAs under the proposed fiduciary regulation is to extend the protections and exemptions of the Employee Retirement Income Security Act's prohibited transaction rules to IRAs, said Timothy Hauser, associate solicitor in the department's Plan Benefits Security Division. "Those are rules that were meant to deal with situations that are fraught with the potential for abuse," he said.

Hauser also said the prohibited transaction rules give DOL broad authority to grant exemptions. "If we find a particular fee practice or arrangement is, on balance, beneficial to participants, we can readily grant exemptions and permit that practice to go forward," he said.

Hauser said he is aware that many financial service providers are worried about the effects of the proposed fiduciary investment advice rules on specific financial practices and fee compensation arrangements in the retail IRA market. However, the department would be able to address those practices and arrangements through its exemption procedures, he said.

"We can put conditions on them where there is a potential for abuse, and we can flatly leave them prohibited in circumstances where no amount of conditions will make the problem go away," Hauser said. Similarly, the fiduciary definition rules covering IRAs could accommodate the financial industry's need for certainty by providing an adequate transition period before the rules would take effect, he said.

#### Carve-Out for IRAs?

One practitioner asked Hauser whether DOL might consider excluding IRAs in a final version of the fiduciary regulation. "Is there any possibility at all that this rule could carve out the retail space and not apply to IRAs, being that it is a different space and it operates pursuant to broker-dealer rules [under] the Investment Advisers Act, and it really is a different ball of wax?" the practitioner said.

Hauser said that undoubtedly the final fiduciary regulation will not be identical to the proposed regulation. However, the department intends the final regulation to cover IRAs. "It's a bit of a false choice to say that our options here are simply to walk away from the IRA market entirely and leave it kind of the wild, wild West," he said.

The choice is not between having no prohibited transaction rules apply to the IRA market or saying that all current practices are prohibited, Hauser said.

"The reality is actually somewhere in-between, and the argument that we should just walk away from it and that we shouldn't be able to impose some conditions has its own flaws," he said.

The department's proposed regulation (RIN 1210-AB32) would revise and expand the definition of the term "fiduciary" under Section 3(21)(A) of ERISA (203 PBD, 10/22/10; 37 BPR 2305, 10/26/10).

Hi, Jennifer

I just wanted to confirm that we would like to start discussions about our draft text for the ERISA fiduciary advice regulation. On our end, I would expect to draw participants from the EBSA offices responsible for regulations, exemptions, and economic analysis, as well as from my office. We'd be happy to meet here or come to the SEC. If you have a few good dates and times in the next few weeks and could gather a similar group of participants, I think the discussion could be very useful. Please let me know what works for you.

Tim Hauser

Thanks again for our talk today. And I look forward to the follow-on discussion you mentioned. Below is the excerpt/summary of the Phyllis Borzi Q&A that I mentioned – and below that is a link to the full piece.

Thanks very much,

Jennifer

**Q&A: Phyllis Borzi Says DoL Won't Defer to the SEC**

With regard to the U.S. Department of Labor's proposed regulation to expand the definition of fiduciary, Phyllis Borzi, assistant secretary of labor and head of the Employee Benefits Security Administration, says the agency likely will not defer to the U.S. Securities and Exchange Commission (SEC). She notes that "we actually sent our proposed regulation to the SEC for their comment and input. . . . They would have flagged it at that point if they had seen an issue." Borzi says the two agencies have found some issues on which to coordinate, stating, "We're actually trying to harmonize." She adds that the ERISA fiduciary standard is higher than the standard under security laws and that the SEC has been "encouraging us to move forward."

Fyi, please see the article below/linked which addresses a recent trend of IAs shifting to fee-based models, potentially in anticipation of the uniform fiduciary standard.

<http://www.investmentnews.com/article/20110713/FREE/110719972>

## Land of the fee: Advisers seen switching revenue model ahead of fiduciary rewrite

MSSB big Charles Johnston says move to fee-based model has been ongoing for six months; dubbed 'safe harbor' by RBC's Taft

By **Mark Schoeff Jr.** <<http://www.investmentnews.com/apps/pbcs.dll/personalia?ID=MSCHOEFF>>

July 13, 2011 3:51 pm ET

With one federal agency in the midst of writing a fiduciary-duty rule and another about to embark on one, many advisers are shifting their business to fee-based accounts, according to an industry executive. Charles Johnston, vice chairman of Morgan Stanley Smith Barney, says the switch is no doubt due to the Securities and Exchange Commission's plan to propose a universal fiduciary standard for retail investment advice.

"It's an interesting trend we've noticed in the last six months," Mr. Johnston said at the Securities Industry and Financial Markets Association regulatory summit in New York on Wednesday.

Mr. Johnston said that his firm's 18,000 advisers, who handle brokerage, advisory and retirement accounts, foresee challenges related to new rules for the brokerage business and are opting for a more stable regulatory environment on the advisory side.

"We have seen a pick up in the move to an advisory platform," Mr. Johnston told reporters after speaking on a panel with other financial executives. "They're doing that in anticipation [that] the world's going to change on the brokerage side."

Mr. Johnston didn't have specific numbers on the trend, noting that "it's not a wide enough sample" to determine that the pending fiduciary rules are the triggering the moves.

"There may be other reasons why it's happening," Mr. Johnston said.

In addition to potential SEC action, the Department of Labor has proposed a regulation to expand the definition of fiduciary for advice about retirement plans.

All the regulatory activity swirling around fiduciary duty is making the traditional standard laid out by the Investment Advisers Act of 1940 — that an adviser must act in a client's best interests — more appealing, according to another financial executive who addressed the SIFMA conference.

"The simplest thing to do is to migrate to a fee-based account," said John Taft, chief executive of RBC Wealth Management (U.S.) and chairman of the SIFMA board. "That's the safe harbor."

The drawback, Mr. Taft asserts, is that small investors who can't afford adviser fees will be harmed.

He cited industry statistics indicating that the cost of advice could double for those with a modest amount of money invested, such as holders of individual retirement accounts.

"That is a perverse result," Mr. Taft said.

Under the Dodd-Frank law, the SEC has the authority to write a universal fiduciary-duty rule. The agency has said it will turn to that task sometime after the first anniversary of Dodd-Frank, which will occur July 21. SIFMA conference participants anticipate the agency will move ahead in the fall.

In January, it delivered to Congress a study, also mandated by Dodd-Frank, which found that such a regulation would provide better protection for investors who are confused about the differing standards investment advisers and broker-dealers must meet. The latter are held to a less stringent "suitability" rule.

SIFMA is imploring the SEC not to foist the Investment Advisers Act on broker-dealers, maintaining that doing so would force them to change their business models and would price small consumers out of the advice market. "Rules that don't exist today need to be written to tell us how to apply the fiduciary standard to brokerage activities," Mr. Taft said.

Among the broker roles that would have to be addressed: principal trading and the issuing of new securities.

Mr. Johnston is confident that the SEC will not try to impose the Investment Advisers Act on everyone providing retail investment advice.

"We're moving away from that," he said. "There will be much more consent and disclosure around traditional brokerage activities."

Disclosure requirements will be an important part of any new SEC fiduciary rule because it will be impossible to completely eliminate conflicts of interest.

"We have to focus on how we manage our conflicts," Mr. Johnston said.

## Investing in a Stranger's Retirement

By [LESLIE SCISM](#) And [MICHAEL CORKERY](#)

Last month, some financial advisers passed around to potential investors a spreadsheet with information about future pension payments for 93 people, including retired civil servants and military veterans.

The advisers' pitch: For a lump-sum amount, investors could purchase pieces of the pensions—offered up by pensioners wanting instant cash in exchange for their future monthly checks—that could yield them 6% or 7% a year. The retiree would sign a contract pledging to hand over part of each month's check for a specific number of years.

The burgeoning business of investing in someone else's pension has never been easier—or more controversial and risky.

For pensioners who are eager to sell, websites beckon with names such as BuyYourPension.com and pension4cash.com. Financial middlemen then bundle the information from pensioners into spreadsheets that are supplied to financial advisers for their clients.

In addition to the yield paid to investors, the transactions aim to reward an array of transaction facilitators. Fees are spread among the website operators, firms that pull together transactions, distributors and financial advisers who land individual investors.

No one keeps track of how many pensions are turned into instant cash, and the number for

now is believed to be small. But in recent months, websites have proliferated, and obscure middlemen far from Wall Street have ramped up efforts to win over financial advisers to the concept. They are finding some acceptance among those who favor alternative investments as part of an overall diversified portfolio.

"It's becoming more of a staple part of our business," said Daniel Cordoba, founder of Asset Exchange Strategies LLC, a Leander, Texas, financial-advisory firm that has sold a handful of pension-payment deals to clients in recent weeks. "There's a starvation for yield" with most bonds paying little interest, and clients are scared of the volatile stock markets, he added.

For some pension recipients, the deals seem like the way out of a financial crisis. Joseph Serina, a metal-fabrication worker who spent 21 years in the Navy, received \$57,450 three years ago from a group of investors in return for promising them \$125,280 in pension payments over eight years.

The difference of \$67,830 is paid to investors as interest payments and as fees to the financial arrangers.

"Even though it seemed kind of high, I felt I had no other choice," said Mr. Serina, 49 years old, who lives in Virginia Beach, Va. Mr. Serina said he was struggling to keep up with his mortgage payments and wanted his daughter to continue sleeping in a familiar place. He also faced overdue bills from a billiards-supply business.

In general, pension deals thread the needle of federal law that discourages the assignment of pensions for public policy reasons, according to court rulings. In a preliminary ruling in August, a California state-court judge said that military-pension transactions by Structured Investments Co., which has been in business since the 1990s, are "prohibited and unenforceable."

Brett Rubin, a lawyer for Structured, said the firm believes its transactions are proper. Over the years, its agreements have been enforced by other courts, including a U.S. bankruptcy court, according to court filings.

Structured is contesting an order in May from California's Corporations Commissioner to "desist and refrain" from misrepresentations or omissions of key facts to potential investors. Regulators said past omissions included a 1994 bank-fraud conviction of a company official and the deals' riskiness. "Structured looks forward to vindicating itself," said Stanley Morris, another lawyer for the firm.

The biggest risk for investors is that pension recipients renege on their promises to turn over monthly checks to the investor.

Mr. Serina decided to stop forwarding his pension checks after learning of the California lawsuits and concluding his deal terms with Structured Investments were "outrageous"—he was paying the equivalent of more than 20% annual interest on the lump sum he received. With the litigation still pending, "I didn't see why I should keep sending payments," he said.

## **For Sale By Owner**

Details about one pension listed for sale in October, paid by the U.S. Army

- **\$800:** Monthly Payment
- **72:** Number of Payments for Sale
- **\$57,600:** Total Payments
- **\$43,807:** Cost to Investor

Mark Cortazzo, a senior partner with financial-advisory firm Macro Consulting Group in Parsippany, N.J., said he refuses to pitch pension deals to his clients. "If these don't work out as expected, you've got a lot of headaches," he said.

Several buyers of pension payments who were interviewed by The Wall Street Journal declined to be identified because they didn't want to be seen as profiting from anyone's financial desperation.

"I had misgivings at first," said an investor in Philadelphia who this summer bought seven years of pension payments from a retired sailor. She forwarded \$50,000, to be repaid in monthly installments that includes 6% annual interest.

As part of the deal, the woman got some information about the seller, including that he needed the money to escape foreclosure. The retired sailor's "distress" bothered her, she said, but she "concluded this would help him save the house."

The pensions detailed in the October spreadsheet came from recent work by Voyager Financial Group LLC, based in Little Rock, Ark. Company officials started zeroing in on pensions about a year ago, said Jonathan Sheets, Voyager's general counsel. Voyager looked to build on its expertise in the secondary market for structured settlements, or awards to accident victims and other plaintiffs that are paid out over years.

Voyager officials helped set up websites that bring in leads, Mr. Sheets said. The company regularly updates a spreadsheet with details about available pension deals. Mr. Sheets said Voyager arranges transactions "within the parameters of the law," and encourages concerned financial advisers "to seek their own independent" legal counsel.

The spreadsheet that circulated in October included deals with a total of \$8.2 million in future income. Of the 93 pensions for sale, a former New Jersey cop had \$72,000 up for grabs, and a retired California civil servant offered a total of \$299,598. Forty-four military veterans were on the list. Among the smallest was \$454.75 a month for five years from a retired Ford Motor Co. worker. The largest: \$396,000 in Marine Corps payments, or \$2,200 a month for 15 years, according to a copy of the spreadsheet reviewed by the Journal.

Voyager said it asks sellers to provide information on their financial situation, and Mr. Sheets said the company won't participate in deals if it becomes apparent a seller "will be incapable of supporting" himself.

The spreadsheet also noted how much insurance was in place on each seller's life. That coverage is important because it protects the investor if the pension recipient dies, ending monthly payments.

Buyers and sellers don't meet, but they do learn each other's name and address, said Mr.

Sheets. Buyers get a credit report about the seller-and a copy of a photo ID.

Hi Tim. Sorry to bother about this but my colleagues asked again today if you would have any comments.

Hope all is going well.

Regards,

Lourdes

Tim,

I also plan on bringing my colleague, Joe Furey, with me. He runs the other half of the Office of Chief Counsel in the Division of Trading and Markets. He used to be the chief compliance officer of Legg Mason so he has a lot of broker-dealer experience.

I hope this report doesn't give either of you heartburn either. Maybe I shouldn't speak publicly anymore.

Prohibited Transactions

DOL Officials Address Role of Exemptions Under Definition of Fiduciary Proposal

The Department of Labor will still provide prohibited transaction exemptions for certain practices of investment advice fiduciaries, but many existing exemptions will need to be reviewed after the department updates its regulation on the definition of a fiduciary, a DOL official said April 5 at a program sponsored by the Practising Law Institute.

"When the regulation is finalized, a lot of those exemptions will need to be massaged," said Ivan Strasfeld, director of the Office of Exemption Determinations at the department's Employee Benefits Security Administration. "The reality is, they're old. They're from 1975, and they've been virtually unchanged," Strasfeld said.

Another DOL official speaking at the PLI event emphasized the role that he expected prohibited transaction exemptions would play in regulating individual retirement accounts under DOL's fiduciary regulation.

The primary reason for including IRAs under the proposed fiduciary regulation is to extend the protections and exemptions of the Employee Retirement Income Security Act's prohibited transaction rules to IRAs, said Timothy Hauser, associate solicitor in the department's Plan Benefits Security Division. "Those are rules that were meant to deal with situations that are fraught with the potential for abuse," he said.

Hauser also said the prohibited transaction rules give DOL broad authority to grant exemptions. "If we find a particular fee practice or arrangement is, on balance, beneficial to participants, we can readily grant exemptions and permit that practice to go forward," he said.

Hauser said he is aware that many financial service providers are worried about the effects of the proposed fiduciary investment advice rules on specific financial practices and fee compensation arrangements in the retail IRA market. However, the department would be able to address those practices and arrangements through its exemption procedures, he said.

"We can put conditions on them where there is a potential for abuse, and we can flatly leave them prohibited in circumstances where no amount of conditions will make the problem go away," Hauser said. Similarly, the fiduciary definition rules covering IRAs could accommodate the financial industry's need for certainty by providing an adequate transition period before the rules would take effect, he said.

Carve-Out for IRAs?

One practitioner asked Hauser whether DOL might consider excluding IRAs in a final version of the fiduciary regulation. "Is there any possibility at all that this rule could carve out the retail space and not apply to IRAs, being that it is a different space and it operates pursuant to broker-dealer rules [under] the Investment Advisers Act, and it really is a different ball of wax?" the practitioner said.

Hauser said that undoubtedly the final fiduciary regulation will not be identical to the proposed regulation. However, the department intends the final regulation to cover IRAs. "It's a bit of a false choice to say that our options here are simply to walk away from the IRA market entirely and leave it kind of the wild, wild West," he said.

The choice is not between having no prohibited transaction rules apply to the IRA market or saying that all current practices are prohibited, Hauser said. "The reality is actually somewhere in-between, and the argument that we should just walk away from it and that we shouldn't be able to impose some conditions has its own flaws," he said.

The department's proposed regulation (RIN 1210-AB32) would revise and expand the definition of the term "fiduciary" under Section 3(21)(A) of ERISA (203 PBD, 10/22/10; 37 BPR 2305, 10/26/10).

Prohibited Transactions  
DOL Officials Address Role of Exemptions Under Definition of Fiduciary Proposal

The Department of Labor will still provide prohibited transaction exemptions for certain practices of investment advice fiduciaries, but many existing exemptions will need to be reviewed after the department updates its regulation on the definition of a fiduciary, a DOL official said April 5 at a program sponsored by the Practising Law Institute.

"When the regulation is finalized, a lot of those exemptions will need to be massaged," said Ivan Strasfeld, director of the Office of Exemption Determinations at the department's Employee Benefits Security Administration. "The reality is, they're old. They're from 1975, and they've been virtually unchanged," Strasfeld said.

Another DOL official speaking at the PLI event emphasized the role that he expected prohibited transaction exemptions would play in regulating individual retirement accounts under DOL's fiduciary regulation.

The primary reason for including IRAs under the proposed fiduciary regulation is to extend the protections and exemptions of the Employee Retirement Income Security Act's prohibited transaction rules to IRAs, said Timothy Hauser, associate solicitor in the department's Plan Benefits Security Division. "Those are rules that were meant to deal with situations that are fraught with the potential for abuse," he said.

Hauser also said the prohibited transaction rules give DOL broad authority to grant exemptions. "If we find a particular fee practice or arrangement is, on balance, beneficial to participants, we can readily grant exemptions and permit that practice to go forward," he said.

Hauser said he is aware that many financial service providers are worried about the effects of the proposed fiduciary investment advice rules on specific financial practices and fee compensation arrangements in the retail IRA market. However, the department would be able to address those practices and arrangements through its exemption procedures, he said.

"We can put conditions on them where there is a potential for abuse, and we can flatly leave them prohibited in circumstances where no amount of conditions will make the problem go away," Hauser said. Similarly, the fiduciary definition rules covering IRAs could accommodate the financial industry's need for certainty by providing an adequate transition period before the rules would take effect, he said.

Carve-Out for IRAs?

One practitioner asked Hauser whether DOL might consider excluding IRAs in a final version of the fiduciary regulation. "Is there any possibility at all that this rule could carve out the retail space and not apply to IRAs, being that it is a different space and it operates pursuant to broker-dealer rules

[under] the Investment Advisers Act, and it really is a different ball of wax?" the practitioner said.

Hauser said that undoubtedly the final fiduciary regulation will not be identical to the proposed regulation. However, the department intends the final regulation to cover IRAs. "It's a bit of a false choice to say that our options here are simply to walk away from the IRA market entirely and leave it kind of the wild, wild West," he said.

The choice is not between having no prohibited transaction rules apply to the IRA market or saying that all current practices are prohibited, Hauser said. "The reality is actually somewhere in-between, and the argument that we should just walk away from it and that we shouldn't be able to impose some conditions has its own flaws," he said.

The department's proposed regulation (RIN 1210-AB32) would revise and expand the definition of the term "fiduciary" under Section 3(21)(A) of ERISA (203 PBD, 10/22/10; 37 BPR 2305, 10/26/10).

Tuesday didn't work for us. But we are available on Thursday 1-2 and 3-5, and on Friday 10-12 and 1-5. In addition to Joe Piacentini, I think Anja Decressin and Chris Cosby will also attend from Joe's office. And, of course, I'll come too. Please just let me know if any of these times work and we will get it on the calendar.

In addition to Joe Piacentini, I think Anja Decressin and Chris Cosby will also attend from Joe's office. And, of course, I'll come too. Please just let me know if any of these times work and we will get it on the calendar.

OK, I will want to loop in our Chief Economist as well. Why don't you check Joe's schedule first and send me a few available times. I'll see what fits in with Craig's schedule then, and hopefully we can find something that works. Feel free to send times on other days as well. I plan to be in all week, but would prefer not to schedule anything on Thursday.

Thanks,

Jennifer

Thanks for contacting me so quickly. I have a meeting at 2, but otherwise I'm available. I would like EBSA's chief economist, Joe Piacentini, to get on the phone too, however, and he is out until next week. If you could send me a time or two that would work for you next Tuesday, I'll talk to Joe on Monday and firm up the time then.

Tim

Tim,

I am following up on our conversation yesterday about our respective efforts at cost-benefit analyses. We think that it would be helpful to get our economists together to compare notes if we can arrange that. I am cc'ing our senior economist in our ia/bd working group so that she can follow up with you.

Thank you so much for thinking of this. We think that this is a terrific idea.

Best,

Lourdes

Tim,

Thanks again for our talk today. And I look forward to the follow-on discussion you mentioned. Below is the excerpt/summary of the Phyllis Borzi Q&A that I mentioned – and below that is a link to the full piece.

Thanks very much,

Jennifer

#### **Q&A: Phyllis Borzi Says DoL Won't Defer to the SEC**

With regard to the U.S. Department of Labor's proposed regulation to expand the definition of fiduciary, Phyllis Borzi, assistant secretary of labor and head of the Employee Benefits Security Administration, says the agency likely will not defer to the U.S. Securities and Exchange Commission (SEC). She notes that "we actually sent our proposed regulation to the SEC for their comment and input. . . . They would have flagged it at that point if they had seen an issue." Borzi says the two agencies have found some issues on which to coordinate, stating, "We're actually trying to harmonize." She adds that the ERISA fiduciary standard is higher than the standard under security laws and that the SEC has been "encouraging us to move forward."

Fyi, please see the article below/linked which addresses a recent trend of IAs shifting to fee-based models, potentially in anticipation of the uniform fiduciary standard.

<http://www.investmentnews.com/article/20110713/FREE/110719972>

## Land of the fee: Advisers seen switching revenue model ahead of fiduciary rewrite

MSSB big Charles Johnston says move to fee-based model has been ongoing for six months; dubbed 'safe harbor' by RBC's Taft

By Mark Schoeff Jr. <<http://www.investmentnews.com/apps/pbcs.dll/personalia?ID=MSCHOEFF>>

July 13, 2011 3:51 pm ET

With one federal agency in the midst of writing a fiduciary-duty rule and another about to embark on one, many advisers are shifting their business to fee-based accounts, according to an industry executive. Charles Johnston, vice chairman of Morgan Stanley Smith Barney, says the switch is no doubt due to the Securities and Exchange Commission's plan to propose a universal fiduciary standard for retail investment advice.

"It's an interesting trend we've noticed in the last six months," Mr. Johnston said at the Securities Industry

and Financial Markets Association regulatory summit in New York on Wednesday.

Mr. Johnston said that his firm's 18,000 advisers, who handle brokerage, advisory and retirement accounts, foresee challenges related to new rules for the brokerage business and are opting for a more stable regulatory environment on the advisory side.

"We have seen a pick up in the move to an advisory platform," Mr. Johnston told reporters after speaking on a panel with other financial executives. "They're doing that in anticipation [that] the world's going to change on the brokerage side."

Mr. Johnston didn't have specific numbers on the trend, noting that "it's not a wide enough sample" to determine that the pending fiduciary rules are the triggering the moves.

"There may be other reasons why it's happening," Mr. Johnston said.

In addition to potential SEC action, the Department of Labor has proposed a regulation to expand the definition of fiduciary for advice about retirement plans.

All the regulatory activity swirling around fiduciary duty is making the traditional standard laid out by the Investment Advisers Act of 1940 — that an adviser must act in a client's best interests — more appealing, according to another financial executive who addressed the SIFMA conference.

"The simplest thing to do is to migrate to a fee-based account," said John Taft, chief executive of RBC Wealth Management (U.S.) and chairman of the SIFMA board. "That's the safe harbor."

The drawback, Mr. Taft asserts, is that small investors who can't afford adviser fees will be harmed.

He cited industry statistics indicating that the cost of advice could double for those with a modest amount of money invested, such as holders of individual retirement accounts.

"That is a perverse result," Mr. Taft said.

Under the Dodd-Frank law, the SEC has the authority to write a universal fiduciary-duty rule. The agency has said it will turn to that task sometime after the first anniversary of Dodd-Frank, which will occur July 21. SIFMA conference participants anticipate the agency will move ahead in the fall.

In January, it delivered to Congress a study, also mandated by Dodd-Frank, which found that such a regulation would provide better protection for investors who are confused about the differing standards investment advisers and broker-dealers must meet. The latter are held to a less stringent "suitability" rule.

SIFMA is imploring the SEC not to foist the Investment Advisers Act on broker-dealers, maintaining that doing so would force them to change their business models and would price small consumers out of the advice market. "Rules that don't exist today need to be written to tell us how to apply the fiduciary standard to brokerage activities," Mr. Taft said.

Among the broker roles that would have to be addressed: principal trading and the issuing of new securities.

Mr. Johnston is confident that the SEC will not try to impose the Investment Advisers Act on everyone providing retail investment advice.

"We're moving away from that," he said. "There will be much more consent and disclosure around traditional brokerage activities."

Disclosure requirements will be an important part of any new SEC fiduciary rule because it will be impossible to completely eliminate conflicts of interest.

"We have to focus on how we manage our conflicts," Mr. Johnston said.

Fyi, please see the article below/linked which addresses a recent trend of IAs shifting to fee-based models, potentially in anticipation of the uniform fiduciary standard.

<http://www.investmentnews.com/article/20110713/FREE/110719972>

## Land of the fee: Advisers seen switching revenue model ahead of fiduciary rewrite

MSSB big Charles Johnston says move to fee-based model has been ongoing for six months; dubbed 'safe harbor' by RBC's Taft

By **Mark Schoeff Jr.** <<http://www.investmentnews.com/apps/pbcs.dll/personalia?ID=MSCHOEFF>>

July 13, 2011 3:51 pm ET

With one federal agency in the midst of writing a fiduciary-duty rule and another about to embark on one, many advisers are shifting their business to fee-based accounts, according

to an industry executive.

Charles Johnston, vice chairman of Morgan Stanley Smith Barney, says the switch is no doubt due to the Securities and Exchange Commission's plan to propose a universal fiduciary standard for retail investment advice.

"It's an interesting trend we've noticed in the last six months," Mr. Johnston said at the Securities Industry and Financial Markets Association regulatory summit in New York on Wednesday.

Mr. Johnston said that his firm's 18,000 advisers, who handle brokerage, advisory and retirement accounts, foresee challenges related to new rules for the brokerage business and are opting for a more stable regulatory environment on the advisory side.

"We have seen a pick up in the move to an advisory platform," Mr. Johnston told reporters after speaking on a panel with other financial executives. "They're doing that in anticipation [that] the world's going to change on the brokerage side."

Mr. Johnston didn't have specific numbers on the trend, noting that "it's not a wide enough sample" to determine that the pending fiduciary rules are the triggering the moves.

"There may be other reasons why it's happening," Mr. Johnston said.

In addition to potential SEC action, the Department of Labor has proposed a regulation to expand the definition of fiduciary for advice about retirement plans.

All the regulatory activity swirling around fiduciary duty is making the traditional standard laid out by the Investment Advisers Act of 1940 — that an adviser must act in a client's best interests — more appealing, according to another financial executive who addressed the SIFMA conference.

"The simplest thing to do is to migrate to a fee-based account," said John Taft, chief executive of RBC Wealth Management (U.S.) and chairman of the SIFMA board. "That's the safe harbor."

The drawback, Mr. Taft asserts, is that small investors who can't afford adviser fees will be harmed.

He cited industry statistics indicating that the cost of advice could double for those with a modest amount of money invested, such as holders of individual retirement accounts.

"That is a perverse result," Mr. Taft said.

Under the Dodd-Frank law, the SEC has the authority to write a universal fiduciary-duty rule. The agency has said it will turn to that task sometime after the first anniversary of Dodd-Frank, which will occur July 21. SIFMA conference participants anticipate the agency will move ahead in the fall.

In January, it delivered to Congress a study, also mandated by Dodd-Frank, which found that such a regulation would provide better protection for investors who are confused about the differing standards investment advisers and broker-dealers must meet. The latter are held to a less stringent "suitability" rule.

SIFMA is imploring the SEC not to foist the Investment Advisers Act on broker-dealers, maintaining that doing so would force them to change their business models and would price small consumers out of the advice market. "Rules that don't exist today need to be written to tell us how to apply the fiduciary standard to brokerage activities," Mr. Taft said. Among the broker roles that would have to be addressed: principal trading and the issuing of new securities.

Mr. Johnston is confident that the SEC will not try to impose the Investment Advisers Act on everyone providing retail investment advice.

"We're moving away from that," he said. "There will be much more consent and disclosure around traditional brokerage activities."

Disclosure requirements will be an important part of any new SEC fiduciary rule because it will be impossible to completely eliminate conflicts of interest.

"We have to focus on how we manage our conflicts," Mr. Johnston said.

Lourdes and Tim,

Can we schedule a meeting for next week to discuss the ERISA/DFA related issues? We are in the process of making final rule recommendations to our Commission to address the business conduct standards comments. I hope to send both of you our draft comment summary and recommendations before we meet next week. You will see that the recommendations reference our ongoing consultations with SEC and DoL. Please let me know which time you prefer for a meeting at the CFTC:

Wednesday morning (8/17): any time after 10:30  
Thursday afternoon (8/18): any time after 3

Best,  
Phyllis

**Subject:** Report on my comments at a speech yesterday

Here's an article from today's BNA Daily Pension Reporter. Hopefully, it doesn't cause either of you heartburn. The audience and panel were composed of financial service industry lawyers, and the questioning was fairly aggressive. Not the best article or my best remarks at the event (which on the whole went pretty well), but what can you do?

## Fiduciary Responsibility

### DOL Official Clarifies Seller's Exemption In Context of Fiduciary Investment Advice

The seller's exemption, one of the most commented on provisions of the Department of Labor's proposed fiduciary regulation, requires drawing a line that is not easily drawn, Timothy Hauser, associate solicitor in the department's Plan Benefits Security Division, said April 5.

Speaking during a program sponsored by the Practising Law Institute, Hauser said the seller's exemption is especially difficult to craft in the context of business relationships that primarily involve the giving of advice. "Do we really want to say that, in some circumstances, you can have a relationship that is primarily an advice relationship, but every now and then you [can] step into a seller's role and sell something out of inventory or do a little self-dealing as long as you disclose it?" Hauser said.

## Swap Transactions

Even with those concerns, Hauser said that the department intended for the seller's exemption to apply to swap dealers involved in transactions in which an independent and knowledgeable fiduciary represents the retirement plan.

The seller's exemption is included in the department's proposed regulation (RIN 1210-AB32) to revise and expand the definition of the term "fiduciary" under Section 3(21)(A) of the Employee Retirement Income Security Act ([203 PBD, 10/22/10](#); 37 BPR 2305, 10/26/10). The seller's exemption would exempt sellers or purchasers who give advice or recommendations in the explicit context of selling or purchasing securities or other properties

from being considered ERISA fiduciary investment advisers.

Hauser said that swap dealers are concerned that they would be unable to take advantage of the proposed seller's exemption under ERISA because of business conduct standards that have been proposed by the Commodity Futures Trading Commission. "That's really not the way we view it," Hauser said. Complying with the business conduct standard in the proposed CFTC regulation, "by itself, is not going to be sufficient to make somebody who is in a bilateral transaction with a plan, on the opposite side of a swap, into a plan fiduciary," he said.

DOL intended for the seller's exemption to apply to two-way swap transactions in which "if the swap moves one way, the plan wins and the swap dealer loses," and vice versa, Hauser said.

Even with a line being drawn for a seller's or counterparty exemption, financial service providers are alarmed that service providers could be held to fiduciary standards by DOL's proposed regulation, Javier Hernandez, a partner at Curtis, Mallet-Prevost, Colt & Mosle in New York, said during the PLI program.

"This is an area where businesses need a lot of certainty because of the consequences of becoming a fiduciary, and where we don't have certainty, it becomes a real business problem," Hernandez said.

ERISA Section 408(b)(2)

Hernandez asked Hauser whether the department would consider relying on its ERISA Section 408(b)(2) interim final rules for disclosing self-dealing or conflicts of interest to plan fiduciaries, "rather than just sweeping everybody into the definition of fiduciary."

Interim final rules (RIN 1210-AB08) under ERISA Section 408(b)(2), published in July 2010, establish disclosure requirements that employers and plan fiduciaries can use to assess the reasonableness of fees charged by companies that provide services to employee retirement plans ([135 PBD, 7/16/10](#); 37 BPR 1540, 7/20/10).

Hauser said the Section 408(b)(2) regulation would not satisfy ERISA fiduciary obligations because, being much more than a disclosure regime, "ERISA prohibits certain transactions because they are thought to be so fraught with potential for abuse" and self-dealing.

Furthermore,

ERISA operates "in a unique context" of people's retirement income and preferential tax breaks, "where arguably special protections are needed," Hauser said.

Just as DOL is struggling to draw a line on the seller's exemption, it is still weighing how the proposed fiduciary regulation should deal with myriad valuation practices, including "valuations of asset pools that do not hold plan assets but nevertheless have benefit plan investors, daily marks in the swap context, and on and on," Hauser said.

Hard-to-Value Assets

Hauser added that he personally thinks it is logical to confer ERISA fiduciary investment adviser status on people who give advice on specific transactions involving hard-to-value assets. "There really isn't a big analytic distinction between giving someone advice on how much to pay for a given asset, as opposed to giving advice to buy a given asset at a market

price. These aren't analytically distinct things for purposes of the statutory definition,” Hauser said.

However, outside of that context, the question of appraisals and fairness opinions “is very much a matter for discussion,” Hauser said. “I just invite your comments on that,” he added. Hauser said the comment record for the proposed fiduciary regulation will remain open until April 12.

**Date:** Wednesday, April 06, 2011 8:24:20 AM

---

Here's an article from today's BNA Daily Pension Reporter. Hopefully, it doesn't cause either of you heartburn. The audience and panel were composed of financial service industry lawyers, and the questioning was fairly aggressive. Not the best article or my best remarks at the event (which on the whole went pretty well), but what can you do?

## Fiduciary Responsibility

### DOL Official Clarifies Seller's Exemption In Context of Fiduciary Investment Advice

The seller's exemption, one of the most commented on provisions of the Department of Labor's proposed fiduciary regulation, requires drawing a line that is not easily drawn, Timothy Hauser, associate solicitor in the department's Plan Benefits Security Division, said April 5.

Speaking during a program sponsored by the Practising Law Institute, Hauser said the seller's exemption is especially difficult to craft in the context of business relationships that primarily involve the giving of advice. "Do we really want to say that, in some circumstances, you can have a relationship that is primarily an advice relationship, but every now and then you [can] step into a seller's role and sell something out of inventory or do a little self-dealing as long as you disclose it?" Hauser said.

## Swap Transactions

Even with those concerns, Hauser said that the department intended for the seller's exemption to apply to swap dealers involved in transactions in which an independent and knowledgeable fiduciary represents the retirement plan.

The seller's exemption is included in the department's proposed regulation (RIN 1210-AB32) to revise and expand the definition of the term "fiduciary" under Section 3(21)(A) of the Employee Retirement Income Security Act ([203 PBD, 10/22/10](#); 37 BPR 2305, 10/26/10). The seller's exemption would exempt sellers or purchasers who give advice or recommendations in the explicit context of selling or purchasing securities or other properties from being considered ERISA fiduciary investment advisers.

Hauser said that swap dealers are concerned that they would be unable to take advantage of the proposed seller's exemption under ERISA because of business conduct standards that have been proposed by the Commodity Futures Trading Commission. "That's really not the way we view it," Hauser said. Complying with the business conduct standard in the proposed CFTC regulation, "by itself, is not going to be sufficient to make somebody who is in a bilateral transaction with a plan, on the opposite side of a swap, into a plan fiduciary," he said.

DOL intended for the seller's exemption to apply to two-way swap transactions in which "if the swap moves one way, the plan wins and the swap dealer loses," and vice versa, Hauser

said.

Even with a line being drawn for a seller's or counterparty exemption, financial service providers are alarmed that service providers could be held to fiduciary standards by DOL's proposed regulation, Javier Hernandez, a partner at Curtis, Mallet-Prevost, Colt & Mosle in New York, said during the PLI program.

“This is an area where businesses need a lot of certainty because of the consequences of becoming a fiduciary, and where we don't have certainty, it becomes a real business problem,” Hernandez said.

#### ERISA Section 408(b)(2)

Hernandez asked Hauser whether the department would consider relying on its ERISA Section 408(b)(2) interim final rules for disclosing self-dealing or conflicts of interest to plan fiduciaries, “rather than just sweeping everybody into the definition of fiduciary.”

Interim final rules (RIN 1210-AB08) under ERISA Section 408(b)(2), published in July 2010, establish disclosure requirements that employers and plan fiduciaries can use to assess the reasonableness of fees charged by companies that provide services to employee retirement plans ([135 PBD, 7/16/10](#); 37 BPR 1540, 7/20/10).

Hauser said the Section 408(b)(2) regulation would not satisfy ERISA fiduciary obligations because, being much more than a disclosure regime, “ERISA prohibits certain transactions because they are thought to be so fraught with potential for abuse” and self-dealing.

Furthermore,

ERISA operates “in a unique context” of people's retirement income and preferential tax breaks, “where arguably special protections are needed,” Hauser said.

Just as DOL is struggling to draw a line on the seller's exemption, it is still weighing how the proposed fiduciary regulation should deal with myriad valuation practices, including “valuations of asset pools that do not hold plan assets but nevertheless have benefit plan investors, daily marks in the swap context, and on and on,” Hauser said.

#### Hard-to-Value Assets

Hauser added that he personally thinks it is logical to confer ERISA fiduciary investment adviser status on people who give advice on specific transactions involving hard-to-value assets. “There really isn't a big analytic distinction between giving someone advice on how much to pay for a given asset, as opposed to giving advice to buy a given asset at a market price. These aren't analytically distinct things for purposes of the statutory definition,” Hauser said.

However, outside of that context, the question of appraisals and fairness opinions “is very much a matter for discussion,” Hauser said. “I just invite your comments on that,” he added. Hauser said the comment record for the proposed fiduciary regulation will remain open until April 12.

Lourdes,

I'd like to take you up on your offer to come over and walk me (and a few of my colleagues) through the SEC's regulation of broker-dealers. Is your offer still open? If so, Wednesday or Thursday look good to me (except for 9:45 both days, 2:00 Wednesday, and 3:00 Thursday).

Thanks again for all the help you've already given me.

# Is Your 401(k) Default Fund on Target? New DOL and SEC Guidance on Target Date Funds

Beth J. Dickstein  
Sidley Austin LLP

© Copyright  
DOL Conflict of Interest Rulemaking 00906

# Topics to Cover

- Best practices for plan fiduciaries in choosing and monitoring target date funds
- Understanding a target date fund's glide path
- Evaluating the fees of target date funds
- Advice to participants on how target date funds operate
- Increased disclosure when a target date fund is the plan's qualified default investment alternative
- DOL Guidance
- SEC proposed regulation relating to advertising of target date funds
- Proposed effective date of SEC rules to marketing and other sales literature relating to target date funds

# Basics

- Definition: funds that “provide varying degrees of long-term appreciation and capital preservation through a mix of equity and fixed income exposures based on the participant’s age, target retirement date (such as normal retirement age under the plan) or life expectancy.”
- Intended to be an “investment solution.”
- Each target date fund generally is intended for participants with a target retirement year within a narrow band of years (such as a five year period).
- Glide Path – the investment strategy for shifting investments to a more conservative portfolio.
- Can be a “fund of funds,” which invests in other funds or a “stand alone” product, which invests directly in a diversified portfolio of assets.

# Glide Path

- Higher risk investments at early age.
- Eventually reaches a “landing point” at which time the asset allocation becomes static.
- Glide path may flatten at the target retirement date.
- Alternatively, glide path may flatten near end of life expectancy.
- Different views on when equity investments should be significantly reduced.

# Allocations Used in Glide Paths of Different Funds

- 2008 returns for 2010 target date funds ranged from -3.6% to -41%.
- Due to wide variation in asset allocations.
- Vanguard - 90% equity at age 40 and younger, declining to 50% at age 65 and 30% by age 72.
- Fidelity – 50% equity at the target date, declining to 20% about 15 years after the target date.
- Bernstein – equity/bond allocation of 60%/40% at age 65.

# Fund of Funds Products

- Mutual fund target date funds – exempt from the fiduciary duty and self dealing prohibited transaction restrictions of ERISA.
- Plan asset target date funds (e.g., bank collective investment funds) – subject to the fiduciary duty and prohibited transaction provisions of ERISA.
- Conflicts of interest?
- Layering of fees?

# Benchmarks

- Lack of accepted industry benchmarks.
- Benchmarks have been established by Morningstar, Dow Jones, Target Date Analytics, and Standard and Poor's.
- Benchmarks of Morningstar Dow Jones and Target Date Analytics are based on each entity's hypothetical optimal glide-path.
- S&P's benchmarks are based on the average allocations of target date funds.
- Difficult to evaluate performance without accepted benchmark.

# Summary of Developments

- Designation as a Qualified Default Investment Alternative by DOL Regulations (12/07).
- ERISA Advisory Council hearing and report (2008).
- Senate Committee Hearing (2/09).
- Joint Hearing by the DOL and Securities and Exchange Commission ("SEC") (6/09).
- DOL Guidance
- SEC Proposed Rule Amendments

# 404(c)(5) Regulations – Target Date Funds as a QDIA

- Effective December 24, 2007.
- Named target date funds as a QDIA.
- Growth in assets invested in target date funds.
- Growth in the number of target date funds available.

# 2008 ERISA Advisory Council Hearing

- Working group requested testimony on various issues including the following:
  - What retirement and participant assumptions should be used when selecting and monitoring target date funds?
  - How does a plan fiduciary evaluate and monitor target date funds when there is no standardized benchmarking methodology?
  - What investment education and communication is required for participants to enable them to invest in target date funds or to assess whether they should actively manage their own investment?
  - What are the different types of target date funds?

# 2008 ERISA Advisory Council Hearing

(continued)

- The working group described plan participants' general need for investment education.
- The working group believes that target date funds could provide a solution to participants' general lack of knowledge/interest in plan investing.
- Working Group Recommendations:
  - The DOL should reinforce ERISA requirements relative to plan investments in target date funds.
  - The DOL should develop participant education materials and illustrations to enhance awareness of the value and the risks associated with target date funds.

# Senate Committee Hearing

- February, 2009 Hearing by U.S. Senate Special Committee on Aging.
  - Concern over retirement security.
  - Focus on target date funds.
  - Senator Herb Kohl, Chairman, sent letters to the Secretary of Labor and the Chairwoman of the SEC urging review of target date funds.

# Joint Hearing by the DOL and SEC

- In response to Senator Kohl's letter, the DOL and SEC held a joint hearing in June, 2009.
- DOL and SEC expressed concerns regarding:
  - Differences in the glide paths;
  - Variance in investment returns between funds with the same target retirement date;
  - Participant disclosure and understanding; and
  - Whether regulatory change or other reform is needed.

# Joint Hearing by the DOL and SEC

(continued)

- Testimony focused on certain topics, including:
  - Importance of target date funds as a “simple” alternative.
  - Reasons for differences in glide paths.
  - Need for equity investments after retirement.
  - Whether target date funds should be customized.

# Joint Hearing by the DOL and SEC

(continued)

- Whether participant disclosure is adequate.
- Considerations for plan fiduciaries in selecting target date funds.
- Suggestions for additional regulation.

# Should the Glide Path be Regulated?

- The Certified Financial Planner Board argues that acceptable allocation ranges should be established.
  - Help align risks with participants' expectations.
- ICI and Profit Sharing Council of America do not believe that either the SEC or the DOL should regulate the ranges of asset allocations.
  - Regulation generally would be unprecedented - except for investments in employer securities and real property, ERISA does not limit types of acceptable investments.

# Joint DOL/SEC Guidance

DOL intends to issue 3 pieces of guidance:

1. Initial joint DOL/SEC guidance titled “Investor Bulletin: Target Date Retirement Funds”, issued 5/6/2010;
2. Best practices checklist; and
3. Amendment to the QDIA regulation as it relates to target date funds.

# Joint DOL/SEC Guidance (continued)

## Investor Bulletin (Issued May, 2010)

- Discusses basics of target date funds:
  - Target date funds are designed to be long-term investments for individuals with particular retirement dates in mind.
  - No guarantee that participant will have sufficient retirement income at the target date.
  - Fund disclosure describes the types of investments and how the investment mix will shift over the life of the fund.
  - Can change so monitor fund's investments over time.

# Joint DOL/SEC Guidance (continued)

## Investor Bulletin (Issued May, 2010)

- Evaluating a Target Date Fund:
  - Review the fund's asset allocation over the entire life of the fund.
  - Review the fund's asset allocation at its most conservative investment mix.
  - Review the fund's risk level.

# Joint DOL/SEC Guidance (continued)

## Investor Bulletin (Issued May, 2010)

- Evaluating a Target Date Fund:
  - Review the fund's performance.
    - Should participants reference a particular benchmark?
  - Review the fund's fees.
    - What should a participant review?

# SEC Proposed Amendments

- Proposed amendments to rule 482 under the Securities Act.
- Proposed amendments to rule 34b-1 under the Investment Company Act.
- Proposed amendments to rule 156 under the Securities Act.

# Rule 482

## Background

- Rule 482 under the Securities Act permits investment companies to advertise information prior to delivery of a statutory prospectus.
- Such advertisements are “prospectuses” under Section 10(b) of the Securities Act.
- Proposed amendment applies to advertisements and supplemental sales literature that “place a more than insubstantial focus on one or more target date funds.”
- Amendments apply whether or not the target date fund is a QDIA.

# Rule 34b-1

## Background

- Rule 34b-1 under the Investment Company Act sets forth the requirements for supplemental sales literature.
- Under Rule 34b-1, a communication sent after the effective date of a fund's registration statement is not deemed a "prospectus" if a statutory prospectus was sent to a person prior to or at the same time the applicable communication was sent to such person.

# Proposed Amendments to Rule 482 and Rule 34b-1

Disclose in print advertising:

- Investor should consider age or retirement date, as well as other factors, including the investor's risk tolerance, personal circumstances, and complete financial situation.
- Investment is not guaranteed and could loss money.
- Circumstances under which allocations can be modified without a shareholder vote.
- If the fund uses a year in its name, describe the intended allocation as of that year and the allocation as of the last quarter and specify that those allocations are as of such times.

# Proposed Amendments to Rule 482 and Rule 34b-1 (continued)

Disclose in print advertising for more than one fund:

- A prominent table, chart, or graph that clearly depicts the asset allocations over the entire life of the funds:
  - at identified periodic intervals (no longer than 5 years)
  - at the inception of the funds
  - at the target dates
  - at the “landing points” (date of static asset allocation)
  - at the most recent quarter end

Radio or TV ads must state the landing point, explain that the asset allocation becomes fixed at the landing point, and describe the intended allocations at the landing point.

# Rule 156

## Background

- Rule 156 under the Securities Act contains guidance on the types of information in investment company sales literature that could be misleading.
- It applies to all sales literature, whether or not delivered with the fund's prospectus.
- Under rule 156, whether a statement is misleading depends on the context in which the statement is made.
- Rule 156 outlines certain situations in which a statement could be misleading.

# Proposed Amendments to Rule 156

- Proposing to amend rule 156 to address certain statements suggesting that securities of an investment company are an appropriate investment.
- Will apply to all types of investment companies.
- Such a statement could be misleading because of the emphasis it places on a single factor, such as an investor's age or tax bracket, as the basis for determining that an investment is appropriate.
- Such statement could be misleading because of representations, whether express or implied, that investing in the securities is a simple investment or that it requires little or no monitoring by the investor.

# Effective Date of SEC Amendments

- Changes to Rule 482 will apply to target date fund advertisements and supplemental sales literature that are used 90 days or more after the effective date of the amendments.
- Rule 156 changes will be effective immediately upon adoption.

# SEC Comments Requested

## SEC requests comments on:

- Does the proposed definition of “target date fund” cover the types of funds that should be subject to the proposal?
- Is it appropriate to limit application of the amendments to marketing materials that place a more than insubstantial focus on one or more target date funds?
- Should the SEC prescribe specific asset classes to be used in disclosing the asset allocation or the methodology for calculating the percentage allocations ?
- Are there additional amendments that would effectively address the concerns relating to target date fund names?
- Should the prospectus requirements provide specific disclosure requirements for target date funds?

# SEC Comments Requested

(continued)

## SEC requests comments on:

- Should specific materials be exempted from the rule?
- Should the SEC prescribe the specific format for the asset allocation disclosure?
- Do investors need other information along with allocation percentages in order to understand the significance of those percentages (such as risks, and volatility of different asset classes)?
- Should there be disclosure whether the glide path extends to the target date or through the life expectancy of the investor?
- Should the prospectus specify a manager's discretion to change the glide path?

# SEC Comments Requested

(continued)

## SEC requests comments on:

- Will the disclosure of a target date fund's asset allocation be an effective way to reduce investor misunderstanding?
- Will the disclosure cause investors to prioritize investment risk at a particular moment in time over longevity risk, inflation risk, or other risks?
- Should the proposal be modified to address any impact that it may have on investor or manager behavior?
- Are there other means to enhance comparability among target date and current asset allocations?
- Are the proposed effective dates appropriate?

Comments due August 23, 2010

# Possible Legislative Actions

- Possible legislation that will require target date fund managers to take on a fiduciary responsibility in order for such funds to be eligible for the designation of QDIA.
- Response to Avatar testimony in Senate hearings and DOL advisory opinion.
- DOL issued advisory opinion to Avatar stating that manager of a target date mutual fund does not become a fiduciary under ERISA merely because the target date fund invests in affiliated funds.

# Is More Regulation Needed?

- Wide differences of opinion.
- Those advocating for additional regulation want:
  - More regulation of disclosures and naming conventions;
  - Specified ranges of asset allocations; and
  - Limitation of mutual fund exception from regulation under ERISA.

# Is More Regulation Needed?

- Those against more regulation state:
  - Existing disclosure rules are sufficient;
  - Regulation of disclosure would not make participants read the disclosure; and
  - Having the DOL and SEC prescribe acceptable asset allocation ranges would be unprecedented and likely unsuccessful.

# Objectives and Key Findings

# Objectives

---

- Provide update on initial Task Order work
  - Findings subject to change based on further work and additional data
- Review Life Cycle/Target Date Funds
  - Provide in-depth look at the universe of life cycle funds
- Evaluate Volatility and Return of Target Date Funds
  - Present volatility/return profiles within and across funds
  - Understand the impact of recent economic crisis
- Explore recent returns and volatility in 2010 funds

# Key Findings

---

- Rates of returns and volatility on target-2010 funds varied substantially in 2008
  - Spread in returns can be traced to substantial variation in equity exposure
  - Some fund families maintain equity exposure of more than 60 percent, even for their 2010 fund
- Returns generally increase with equity exposure, except in 2008
- Overall objective of funds, as stated in fund prospectuses, is generally not informative of whether a fund is aggressive or conservative
- Funds that performed particularly poorly in 2008 were heavily exposed to equities
  - Performance may rebound when the returns on equity improve.
- Best performing 2010 funds in '08 were not “typical” TDFs
  - “American Century Target Maturity 2010 Inv” invests only in Treasuries
  - “DWS Target 2010” does not have 2020, 2030, 2040, 2050 sibling funds

# Data and Methodology

The background of the slide is a light blue color with several dark blue puzzle pieces scattered across it. The puzzle pieces are of various shapes and sizes, some overlapping each other. The overall effect is a textured, abstract background.

# Data\*

---

- Volatility and Returns

- Computed from daily fund prices
- Source: Bloomberg, Yahoo Finance and the Thrift Savings Plan website

- Asset Composition

- Source: MarketWatch and the Thrift Savings Plan website
- Asset Composition

- Funds in the Sample

- 1,645 currently active funds defined by Morningstar as Life Cycle Funds
- Funds asset sizes range from less than \$1 mil to \$16.8 bil; mean size is \$493 mil, median size is \$25 mil
- Fraction of each fund in stocks ranges from 0% to 97% (median 68%) and net fraction in cash ranges from -107% to 38% (median 5%)

\*Deloitte FAS assumes that such information and data are reliable. We have observed, however, in a small number of cases differences between these data and data reported by other commonly used sources.

# Efficient Frontier

---

- Optimal allocations should be along the mean-variance frontier, which contains diversified portfolios of risky assets

## Mean-Variance Efficient Frontier

# Methodology

---

- Returns are historical annualized daily returns over N years, from day t=1 until day t=T;

$$\text{return} = \sqrt[N]{\frac{\text{price}(T)}{\text{price}(1)}} - 1$$

- Volatility is the historical annualized standard deviation in the daily percentage change in returns;

$$\text{volatility} = \text{StdDev}_{i=1, \dots, T} \left[ \frac{\text{price}(i) - \text{price}(i-1)}{\text{price}(i-1)} \right] \times \sqrt{T / N}$$

# Primary Findings

# Volatility/Return within a Family of Funds

---

- Before 2008, return and volatility within a family increased with the target date
  - Appear to be along an Efficient Frontier

Volatility and return in 2005-2007 for a single family, single class of funds

# Volatility/Return Across Funds

---

- While fund managers differed in target investments and returns, the patterns were largely similar

Volatility and return in 2005-2007 for various fund families (investor class)

# Investor Classes Differ Mostly in Returns

---

- Within fund families, investor classes vary in fees and thus returns, not in volatility

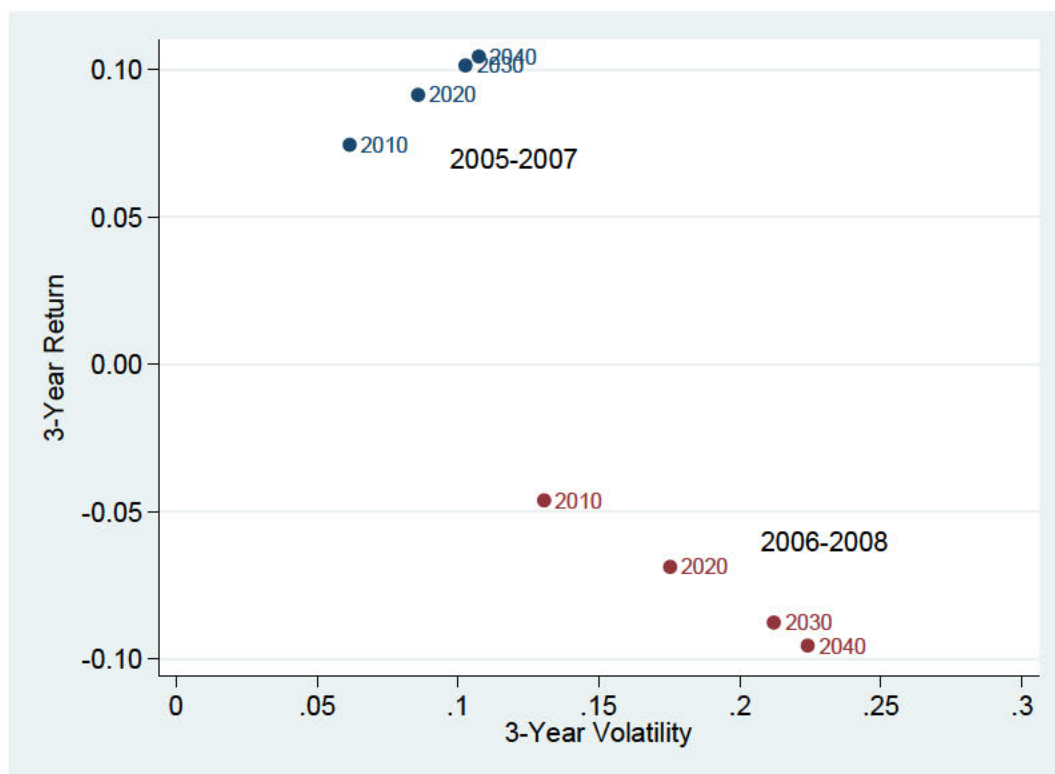

Volatility and return in 2005-2007 for various investor classes (single fund family)

# Crash Reduced Returns, Upped Volatility

---

- The market crash that started in 2008 increased volatility and lowered returns

Volatility and return in 2005-07 vs. 2006-08 (single fund family, single investor class)

# 1-Year Differences Were Even Larger

---

- 1-year volatility generally higher than 3-year volatility; 1-year returns lower than 3-year returns

Volatility and return in 2007 vs. 2008 (single fund family, single investor class)

# 2010 Funds: *A First Look*

# 2010 Funds Varied in Volatility and Returns

---

- Target date funds, even with the same target year, are heterogeneous in volatility/return profiles

Volatility and return in 2008 for funds with target date 2010 (many fund families, single investor class)

# Returns Dropped, Differences Widened

- As may have been expected, funds with target date 2010 had lower average returns in 2008 than in 2007, and fund return differences widened

Distribution of rates of return in 2007 vs 2008 among funds with target date 2010 (many fund families, single class)

# Volatility Rose In Many Funds

---

- Funds with target date 2010 varied in 2007 volatility; appeared more volatile in last 12 months

Distribution of volatility in 2007 vs 2008 among funds with target date 2010 (many fund families, single class)

# Heterogeneity in Small and Large Funds

---

- Small 2010 funds are more heterogeneous in rates of return than large funds

Distribution of rates of return in 2008 among funds with target date 2010, weighted/unweighted by asset size (many fund families, single class)

# Heterogeneity in Small and Large Funds

---

- Small 2010 funds are more heterogeneous in volatility than large funds

Distribution of volatility in 2008 among funds with target date 2010, weighted/unweighted by asset size (many fund families, single class)

# Volatility is Related to Equity Exposure

---

- Volatility among 2010 funds correlates with fraction of funds invested in stocks

Current equity exposure vs volatility in 2008 among funds with target date 2010, (many fund families, single class)

# 2010 Funds: A Closer Look

# Objectives

---

- Investigate variability in the 2008 performance of 2010 funds
  - Compare '08 performance of 2010 fund with other TDFs in the fund family
  - Compare fund families' performance in '08 with that in '06, '07 and '09
- Link between fund performance and fund philosophy
  - Examine the glide paths (asset composition over different target dates) of fund families

# Methodology

---

- Illustrative sample selection
  - A case study of 2010 funds that performed well, intermediately, and poorly in '08, and other members of their families
  - Within-family investor classes with relatively low expense ratios
- Time-period selection
  - One-year results for '06, '07, '08 and partial year '09 (through 10/9/09)
  - Funds established during a year are excluded from the results for that year

# Funds\* in the Case Study

---

## **Alliance Bernstein 2010 Retirement Strategy I**

Seek the highest total return over time consistent with its asset mix (which emphasizes capital preservation and income for periods nearer to and after retirement).

## **American Century Target Maturity 2010 Inv\*\***

Seek the highest return consistent with investment in U.S. Treasury securities.

## **DWS Target 2010\*\*\***

Provide a guaranteed return of investment to investors who reinvest all dividends and hold their shares to the Maturity Date and to provide long-term growth of capital.

## **Fidelity Advisor Freedom 2010 I**

Seek high total return with a secondary objective of principal preservation.

## **Oppenheimer Transition 2010 Y**

Seek total return until the target retirement date and then seeks income and secondary capital growth.

## **Vanguard Target Retirement 2010**

Seek high total return with a secondary objective of principal preservation as the fund approaches its target date and beyond.

## **Thrift Savings Plan L 2010 Fund**

Provide the highest possible rate of return for the amount of risk taken.

\*Where applicable the case study includes some or all of 2000 (a.k.a. "Income" or "Retirement"), 2010, 2020, 2030, 2040 & 2050 Target Date Funds. Off-decade funds are excluded. Fund descriptions are based on their prospectuses.

\*\*For this family only a 2010 and 2020 fund are available.

\*\*\*Other target dates are from the DWS LifeCompass fund family.

# Variability in Performance of 2010 Funds in '08

Graph depicts a universe of 32 Target Date Funds

**Better in '08:**  
American Century and DWS

**Intermediate in '08:** Thrift Savings Plan, Vanguard and Fidelity

**Worse in '08:**  
Alliance Bernstein and Oppenheimer

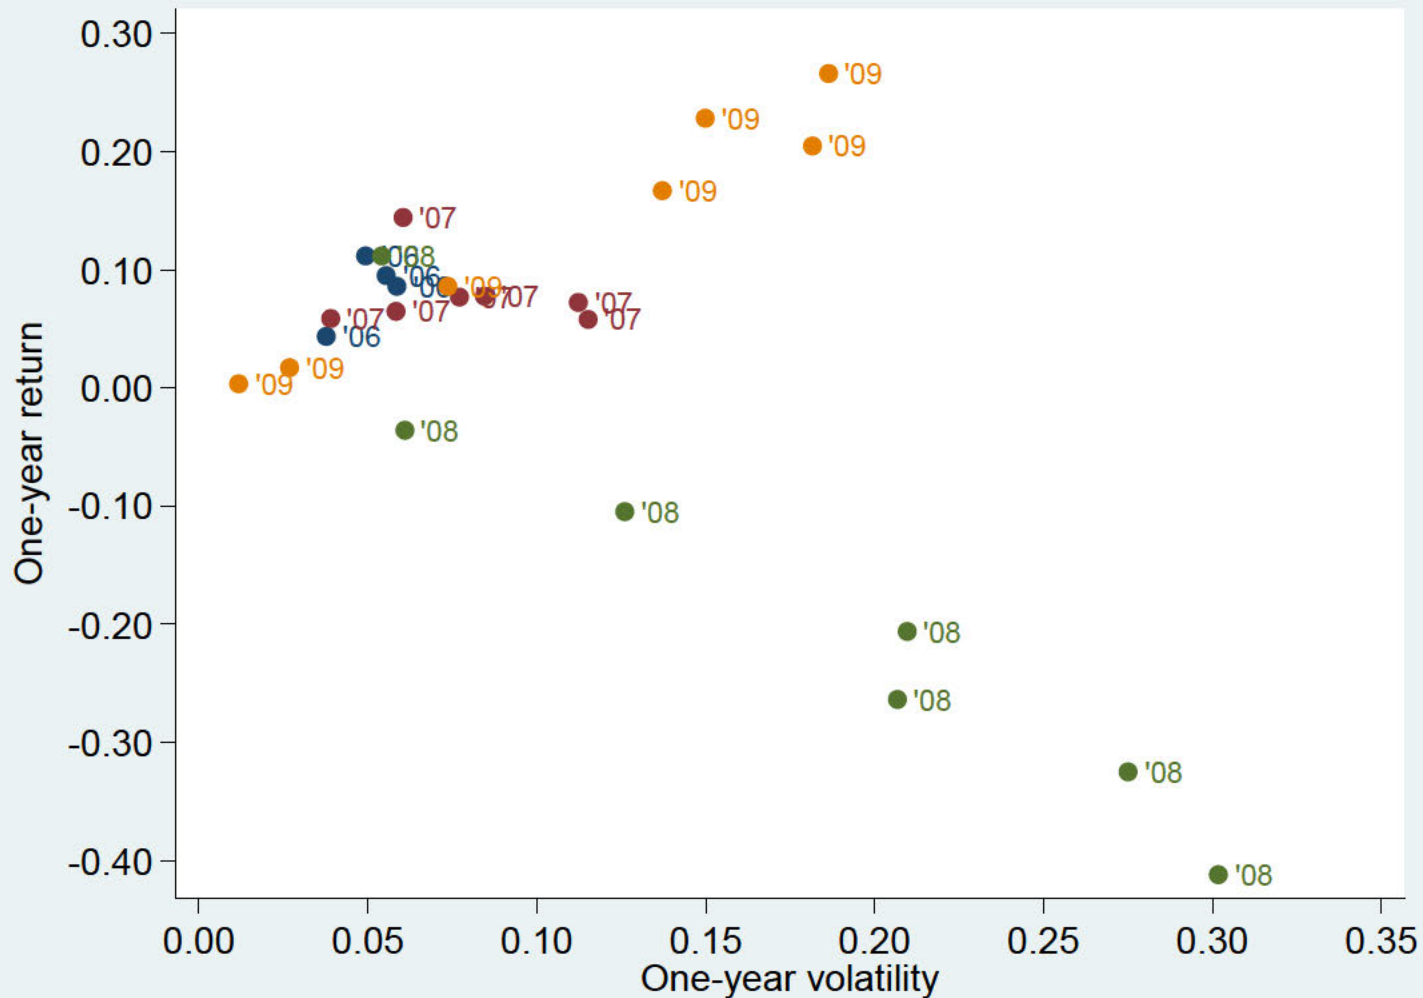

# Summary of the Seven Highlighted 2010 TDFs

## Introduction

Target Date Funds (“TDFs”, also known as life cycle funds) have become an important component of individual retirement decisions. TDFs are investment vehicles that invest their assets into other mutual funds. A key aspect of TDFs is that the asset allocation changes over time such that the investment risks diminish as the fund’s target date approaches. For example, a lifecycle fund with a 2030 target year is generally marketed to Defined Contribution (“DC”) plan participants who aim to retire around 2030. Its investment strategy would become more conservative as the target date approaches. The underlying idea is that the risk workers should take on should diminish as their investment horizon shortens.<sup>1</sup> Some of the earliest TDFs were developed in the mid-1990s and many fund managers now offer a series of lifecycle funds. Evidence suggests that 70 percent of U.S. employers now use target-date funds as their default investment (Collins, 2009). The Thrift Savings Plan, a DC plan for federal employees, added life cycle funds to its investment options in 2005.

Typically, DC plan participants have choices over how to invest their retirement assets, in stocks, bonds, money market funds and mutual funds. The purpose of the work described in this report is to gain a better understanding of how TDFs can affect the accumulation of retirement wealth compared to other asset holdings. To that end, the U.S. Department of Labor (“DOL”) requested that we use the micro-simulation model PENSIM to examine the distribution of DC benefits accumulated by investors under various asset allocation strategies.

## 1. Background

As noted above, TDFs were first offered in the 1990s and have grown steadily in popularity. Recent estimates suggest that over \$227 billion dollars are invested in these types of funds (Donahue 2009). The Pension Protection Act of 2006 (PPA) designated target-date funds as one of the qualified default investment alternatives (QDIAs). In December 2008, 31 percent of 401(k) participants held TDFs (VanDerhei, et al. 2009).

TDFs have a common feature of a predetermined declining equity exposure as the participant approaches the target retirement date. In practice, there are significant differences in the equity glide paths chosen by different fund families and offered by different plans. Our earlier research for EBSA on actual funds suggested that TDFs generally have over 90 percent equity exposure several decades before the target date, declining to 20 to 60 percent at the target dates.

Several papers have used stochastic simulation models to examine, among other things, the role of TDFs in the accumulation of retirement wealth. One of the key papers on this topic is Holmer (2009a). This paper utilizes the PENSIM software to conduct the analysis. Under different assumptions of assumed risk aversion and different TDF asset

---

<sup>1</sup> See Viceira (2009) and Kintzel (2007) for a general description of the underlying characteristics of TDFs.

allocation assumptions, Holmer simulates risk-adjusted retirement (OASDI, DB and DC) and pension (DB and DC) benefits at age 70 for a U.S. cohort born in 1990. It is important to note that our work utilizes many of the same methodological, individual and macroeconomic assumptions as presented in this paper. There are a number of important findings in this paper. Holmer finds, for example, that the highest risk-adjusted pension benefit is obtained when following a rule that mimics actual TDFs—equity investment shares of 75 to 80 percent at age twenty declining to 30 to 35 percent at age 65. He also finds that at lower levels of risk aversion, risk-adjusted pension benefits are greater when there is a greater share of equities available in the life cycle fund. Expanding the analysis to include OASDI, he finds that the low risk associated with these benefits suggests that higher overall risk-adjusted benefits can be found by taking on more risk in the other investment components (i.e., a higher equity percentage in the life cycle fund).

Another paper that is similar to our work is Poterba et al. (2005). In this paper the authors consider how different asset allocation strategies impact the retirement wealth and expected utility of wealth for a cohort of individuals in the Health and Retirement Study. Like the analysis we present below, the authors consider a variety of possible asset allocation rules including ones that include only one asset (100 percent inflation-indexed bonds, long-term government bonds, or corporate stock), ones that include a mixture of two assets using a simple allocation rule (i.e., equity percent equals 110 minus age of household head), and ones based on actual TDFs available in the market. Interestingly, their simulated wealth measures suggest that allocating 100 percent in equities leads to the greatest wealth at retirement. They also suggest, however, that their results are sensitive a number of the parameters including the assumed return on equities. TDFs, on the other hand, appear to perform about as well as simpler asset allocations in which the equity exposure over time is equal to the average of that found in a market TDF.

Finally, Pang and Warshawsky (2009) use a stochastic simulation model to consider the risk and return tradeoffs of life cycle funds. An interesting feature of their paper is that they consider five different actual TDFs for analysis. They recognize that not all TDFs are the same even if they have the same target date. The funds are chosen for analysis by specific percentiles of equity share (95<sup>th</sup>, 75<sup>th</sup>, 50<sup>th</sup>, 25<sup>th</sup>, and 5<sup>th</sup> percentiles) out of all funds available on a selected date. They focus on the wealth and level of risk at age 65 for individuals who invested in TDFs early in their careers, in the middle of their careers, and at retirement. One of their results suggests that TDFs are not without risk and there is variation in the risk levels across the various funds.

## **2. The PENSIM Software**

### Overview of the PENSIM software

As directed by DOL, this project uses the software developed by the Policy Simulation Group (“PSG”) for producing estimates of individual benefits under the employer-

sponsored pension system in the US.<sup>2</sup> Our analyses mainly use two of the PSG's three computer simulation models. SSASIM provides the "projections of key macrodemographic and macroeconomic assumptions, as in the 2009 OASDI Trustees Report." The second model, PENSIM, uses the SSASIM macro projections to microsimulate the accumulation patterns of a cohort of individuals covered by employer-sponsored pensions. The third model, GEMINI, was used in the simulations only to obtain certain pension related outputs.

The models consist of numerous equations that predict marriage, employment, job changes, pension plan availability, death and other outcomes for each individual. Additionally, the models project annual rates of return on assets chosen by the individual as well as contributions and withdrawals. In its simplest form, each run of the PENSIM model, with macro conditions projected from SSASIM for each year of the simulation, produces paths of employment income, pension wealth from various sources and other financial measures over time for each individual. Many of these quantities can be accessed from the various output tables.

We use the functionality of the PSG models that allows multiple-scenario runs that simulate the outcomes for each individual under "stochastic pension environments." The values of the macrodemographic and macroeconomic variable change across the various scenarios, which may be interpreted as future states of the world. This generates a number of possible paths for each individual. Specifically, fifteen major variables are assumed to be stochastic: total fertility rate, net immigration flow, mortality decline rate, female and male labor force participation rates, unemployment rate, inflation rate, productivity growth rate, wage share growth rate, hours worked growth rate, nominal interest rate on Treasury bonds, disability incidence rate, disability recovery rate, equity return, and the rate spread between Treasury bills and Treasury bonds.<sup>3</sup> Macroeconomic scenarios result in different pension wealth accumulation outcomes because of variation in rates of return on equity and bonds, but also because different economic conditions affect wages and DC plan contributions. Much of our analysis studies the differences in the distributions of pension wealth accumulation across 500 scenarios with different macro conditions.<sup>4</sup>

Our analysis focuses on the effects of TDFs, as compared to other investments, on the accumulation of DC pension benefits. We ignore the wealth accumulated through the Social Security system and wealth from defined benefit ("DB") pension plans.<sup>5</sup> As a

---

<sup>2</sup> Description of software is drawn from Holmer (2009b). In particular, we use the the standard version of December 18, 2009. Our use of the PSG models described herein was at the direction of DOL.

<sup>3</sup> See Holmer (2009d), page 11.

<sup>4</sup> These 500 scenarios represent a sample of potential states of the macro economy; they do not represent all potential states of the world. It is conceivable that under certain other scenarios, our findings might be different.

<sup>5</sup> In the PSG models, employers' offerings of DB and DC plans are exogenous to the individual (that is, workers do not sort into jobs that offer particular pension plans). Additionally, retirement decisions are assumed not to depend on accumulated retirement wealth. Under these conditions, we assume that DB and Social Security wealth are exogenous or held constant for the individual and we are comfortable focusing on differences in DC pension accumulations.

result, our analysis is not a complete accounting of the accumulated retirement wealth of individuals.

In general, we make very few changes to the parameter values in the baseline equations in the PSG models. We change the specifications of investor styles, described in detail below, but otherwise run the models with their default parameter values. A sensitivity analysis of the underlying models and verification of parameter choices is beyond the scope of this paper.

### Investment options

PENSIM allows for a variety of equity and debt investment options. SSASIM uses historical data to estimate the parameters that determine the cyclical dynamics of four stochastic macroeconomic variables—the inflation rate, the nominal yield on Treasury bonds, the return on equities, and the yield spread between Treasury bills and Treasury bonds—that determine asset returns. Cyclical fluctuations in these four macroeconomic variables are generated using a vector-autoregressive model with a two-year lag structure, a VAR(2) model, the parameters of which are estimated with annual historical data.<sup>6</sup>

Table 1 below summarizes the characteristics of available investment options.

| <b>Table 1: Asset Characteristics</b>                                                                                                                                                                  |                     |                  |                        |                |

| *** TDF return depends on the age-specific mix of assets held in the fund.                                                                                                                             |                     |                  |                        |                |

*Equities:* The equity investments range from a portfolio of relatively few stocks, to a fund that is diversified but not as much as the Standard and Poor's 500 ("S&P500") index, to an equity index fund that mimics the S&P500. The S&P500 returns are generated as described above. The less diversified equity options have returns that are equal to the S&P500 return plus a shock ( $\epsilon$ ) drawn from a distribution that can be specified by the user. Table 1 shows the default distributions used in PENSIM and suggests a wider variance for less diversified holdings.

<sup>6</sup> See Holmer (2009d), page 14. The PENSIM user may change these parameters.

*Debt:* US Treasury bills and bonds are available. The returns on T-Bonds are generated as described above; T-Bill returns are a fraction of T-Bond returns.

*TDFs:* TDFs are age-variant portfolios of equities and debt. TDFs can hold T-Bills, T-Bonds, Equity Index Fund, and a portfolio of stocks specific to the TDF, where the weights on each asset can change as the holder ages. The return on a TDF in any year depends on the specific mix of assets in the fund.

Each individual holding a particular asset realizes the same annual return on the asset. No asset beats the market (i.e., S&P500) consistently. In the stochastic runs, 500 macro scenarios are characterized by different values of asset rates of return, inflation and other variables drawn from distributions embedded in the SSASIM module. The macro draws affect the real returns on the asset holdings over the individual's lifetime and, therefore, her accumulated retirement wealth.

### **3. Descriptions of Scenarios and Investor Styles**

#### Specifications of Macro Scenarios and Investor Styles

Each simulation selects a 0.5% sample of individuals from the 1995 birth cohort, or about 30,000 individuals whose lifecycle and employment outcomes and asset returns are generated by PENSIM. In the stochastic runs, individual outcomes are generated for 500 macro scenarios using a Run Specification File (.rsf) in the standard version of PENSIM.

We investigate the effects of various investment strategies by assigning individuals to investor Styles that we specify. PENSIM allows up to four Styles to be specified in each run and a probability of assignment to each Style.<sup>7</sup> Our strategy is to run different sets of macro scenarios with all individuals assigned to one Style and compare outcomes across runs. This has several advantages. First, we can specify more than four Styles. Second, it is not necessary to specify the fraction of individuals in each Style. Third, we observe the full sample of 30,000 individuals in each Style. One disadvantage of our approach is that we cannot easily combine our sets of investors to represent the population or mimic the aggregate asset allocations of DC plan investors in the US.

#### Sources of Variation in Pension Outcomes

Across 500 macro scenarios there are two principal types of variation in the individual's accumulation of DC benefits. First, there are different future states of the world (macro environments) as described earlier that affect rates of return. The SSASIM software generates different values for each macro variable for each scenario. Second, across macro scenarios, individuals realize different outcomes for education, income, death date

---

<sup>7</sup> In the PENSIM module, the Style definitions are found in the *ACCTAA1*, *ACCTAA2*, *ACCTAA3*, and *ACCTAA4* tables, which allows the user to specify asset allocation weights at various ages; TDFs are specified in *Assets tdf\_aa\_id*. The probabilities for assignment into each Style are specified in *AA\_PROB* table and can change over calendar years. The individual's Style is fixed over her lifetime, but the Style definition is very flexible and allows for a number of investment strategies to be modeled. PENSIM's baseline Style definitions and their probabilities produce aggregate asset allocations similar to that found in a very large sample of 401 plans (Holmer (2009c), page 226).

and other lifecycle and employment outcomes. This prevents a comparison of individual outcomes across macro scenarios, because important characteristics of the individuals vary across macro scenarios. In other words, each macro scenario in effect represents a different sample of individuals experiencing the specific macro conditions in that scenario. In particular, the plan contributions made by a specific individual differ across macro scenarios. In what follows we compare the outcomes for all samples of individuals across macro scenarios while only focusing on differences generated by the macro variables and ignoring other differences across individuals.<sup>8</sup>

When we change the investor style across runs, the individual’s lifecycle and employment outcomes are fixed for each macro scenario. For example, in one comparison below, we assign all individuals to a fund filled only with T-Bonds and run 500 macro scenarios. In another run, we assign all individuals to an equity index fund and run the same 500 macro scenarios. Individual lifecycle and employment outcomes are the same, macro scenario by macro scenario, while the DC benefit accumulation changes according to the asset holdings and the macro influences on the returns for that asset. This allows comparisons at the individual level across the Style assignments in different runs, but as mentioned above not across macro scenarios within the same run.

Investor Styles

The table below defines our investor Styles, which are characterized by the fraction of the individual’s DC pension wealth in each asset class at each age.<sup>9</sup>

|                               | <b>1:<br/>DEF</b> | <b>2:<br/>GBF</b> | <b>3:<br/>EIF</b> | <b>4:<br/>DEF+<br/>GBF</b> | <b>5:<br/>MMF<br/>+GBF</b> | <b>6: TDF<br/>Conservative</b> |      | <b>7: TDF<br/>Aggressive</b> |      |

| Government Bond Fund (GBF)    |                   | 100%              |                   | 50%                        | 50%                        |                                |      |                              |      |
| Target Date Fund              |                   |                   |                   |                            |                            | 100%                           | 100% | 100%                         | 100% |
| GBF                           |                   |                   |                   |                            |                            | 9%                             | 79%  | 9%                           | 39%  |
| MMF                           |                   |                   |                   |                            |                            | 3%                             | 3%   | 3%                           | 3%   |
| EIF                           |                   |                   |                   |                            |                            | 44%                            | 9%   | 44%                          | 29%  |
| Stocks                        |                   |                   |                   |                            |                            | 44%                            | 9%   | 44%                          | 29%  |

<sup>8</sup> In essence, this means that the sample of individuals changes across macro scenarios. This feature where individual lifecycle and employment outcomes change across macro scenarios may prevent some types of analyses of interest to some researchers.

<sup>9</sup> In PENSIM, the individual is assumed to rebalance her portfolio to achieve the defined mix at each age, rather than change the flow of contributions and withdrawals to achieve the defined mix over time.

Styles 1 through 3 represent single-asset investors who choose the same asset over their investing lifetimes. Styles 4 and 5 are investors who split their assets between a diversified equity fund and either money market funds or government bond funds, with the same weighting between the two assets over their investing lifetime.

We construct two TDF options. The conservative TDF (Style 6) starts out heavily invested in equities (44% in equity index fund and 44% in other stocks) and the equity fraction declines linearly over time until age 65 when the equity fraction is 18%. The aggressive fund (Style 7) starts out with the same allocation as the conservative TDF, but stays more heavily weighted in equities, achieving 58% in equities by age 65. The glide paths for each of the TDF options are shown in Figures 1 and 2.<sup>10</sup>

## 4. Results of Scenario Analyses

### Metrics and Methods

The measure of pension wealth we use in our analysis is the present value at age 65 of DC pension benefits expressed in 2009 dollars; the cohort in our analysis, born in 1995 reaches age 65 in the year 2060. In the PSG models, this is variable *ipvpb* and it represents the present value of the individual's lifetime stream of DC pension benefits as of age 65 (plus her DB cash balance accumulations, which tend to be small and are inseparable from the DC benefits in the PSG models).

In each macro scenario and for each investor Style, some fraction of individuals accumulate no DC pension wealth because their employers do not offer such plans, or investors switch employers and cash out their rollover balance, or, in a very small number of cases, the investor's contributions are small and the returns are poor enough to zero out her balance by age 65. In what follows, we account only for workers with positive DC pension benefits.

Our primary interest is in DC pension benefit differences due to investor styles. We therefore suppress differences across individuals of a cohort by computing a summary statistic (mean, median, 10<sup>th</sup> percentile, 25<sup>th</sup> percentile) across individuals and comparing

<sup>10</sup> In PENSIM, investors are assumed to convert their accumulated DC pension benefit into an annuity. This insulates retirees from risk in the equity and bond markets in the years between retirement and death.

only those summary statistics across investor styles. Each summary statistic has a distribution because of variation in macrodemographic and macroeconomic conditions. We derived those distributions by simulating a large number (500) of macro environments for each investor style. Our objective is thus to compare the distributions of, say, median DC pension benefits across investor styles, the 10<sup>th</sup> percentile of pension benefits across investor styles, et cetera.

### Analysis

Table 3 presents summary statistics of the distribution of mean present values of DC pension benefits, for each of the seven investor Styles that we consider. For example, the average mean benefit under the GBF investor style was \$286,000. Under adverse macro conditions, the mean was lower; under favorable conditions, it would be higher. The 10<sup>th</sup> percentile of the distribution of means was \$211,000 and the interdecile range (difference between the 90<sup>th</sup> and the 10<sup>th</sup> percentiles) was \$153,000.

| Investment Style | Mean | P10 | P25 | Median | Inter Decile Range |
|------------------|------|-----|-----|--------|--------------------|
| GBF              | 286  | 211 | 244 | 282    | 153                |
| MMF+GBF          | 253  | 198 | 225 | 250    | 111                |
| DEF+GBF          | 358  | 228 | 267 | 340    | 285                |
| DEF              | 463  | 190 | 238 | 401    | 597                |
| EIF              | 511  | 204 | 256 | 440    | 673                |
| Conservative TDF | 328  | 221 | 260 | 315    | 232                |
| Aggressive TDF   | 390  | 222 | 263 | 363    | 371                |

Note: Each investor Style was simulated under 500 macro environments. For each of these macro scenarios, we calculated the mean present value of DC pension benefits. This table summarizes the distributions of mean benefits across macro scenarios. Also see Figure 3.

On average, mean benefits were lower for all-debt styles (GBF and MMF+GBF) than for all-equity styles (DEF and EIF). As expected, mixed debt and equity styles (DEF+GBF, conservative TDF, aggressive TDF) performed in between all-debt and all-equity styles.

While all-equity styles outperformed all-debt styles on average, their risk or volatility was greater, as demonstrated by their wider interdecile ranges. Indeed, all-equity styles do not stochastically dominate all-debt styles at the mean level of benefits. For example, at the 10<sup>th</sup> percentile, all-equity styles performed worse than the GBF style. The optimal investor style for the mean individual is therefore ambiguous; in most of the states of the world, an all-equity style such as EIF performed best, but individuals with a strong risk aversion may prefer an all-debt style such as GBF. “Heat map” tables below show how often the various investor styles outperform each other.

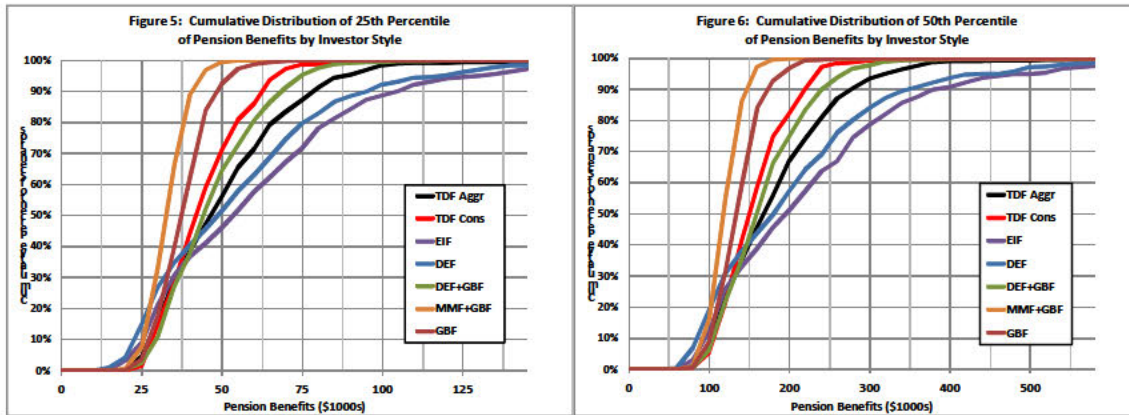

The appendix contains tables with summary statistics of the distributions of the 10<sup>th</sup> percentile, the 25<sup>th</sup> percentile, and the median of the present value of DC pension benefits, similar to Table 3 for the mean benefit.

*Cumulative Distributions:* The following figures show, for each investor Style, the cumulative distribution of the present value of DC pension benefits across macro scenarios. The first figure, Figure 3, shows the cumulative distribution of the mean benefit amount. For any investor Style the curve shows the fraction of the macro scenarios where the accumulated pension benefit was less than or equal to the value on the horizontal axis. For example, Equity Index Fund (the right-most or purple curve) investors earned mean benefits of around \$440,000 or less in 50% of the macro scenarios. Investors in the Conservative TDF (the red curve) earned mean benefits of around \$315,000 or less in 50% of the macro scenarios and investors in the MMF+GBF (the orange or left-most curve) earned mean benefits of around \$250,000 or less in 50% of the macro scenarios.

The distributions of the mean benefit for TDFs are sandwiched between the all-equity funds and the all-debt funds. The constant-weighted debt and equity portfolio (DEF+GBF) falls between the two TDFs, representing an equity weighting that over the individuals’ investing lifetime is less aggressive than the aggressive TDF and more aggressive than the conservative TDF.

Figures 4 to 6 below show the distributions of the 10<sup>th</sup> percentile, the 25<sup>th</sup> percentile, and the median of accumulated benefits. (Figure 3 corresponds to Table 3; Figures 4 to 6 correspond to the Appendix tables.) The same general patterns as for the means hold at these points in the distributions. For most macro scenarios, the ordering of the Styles is the same as for the means, with the equity Styles outperforming other asset allocations most of the time. Presumably because of its higher asset management fees (see Table 1), the DEF Style performed worse than the EIF Style. Also see Table 8 below.

*Dominating Styles:* The final analysis compares pension benefits to determine which styles tended to outperform the others in a pair-wise “horse race.” Each row of the “heat map” tables below represent the fraction of macro scenarios where the benefit to the investor Style in the left hand column (Investor Style A) exceeded the benefit to the investor Style in the columns to the right (Investor Style B). The data underlying Tables 4 to 7 are the same as those depicted in Figures 3 to 6; the “heat map” tables summarize how often the various Styles outperform one another, i.e., how often one curve lies to the right of another curve.

Consider Table 4 with a comparison of mean benefits across investment Styles. It reflects the same data as Figure 3 and Table 3. The color coding is such that green cells represent cases where Investor Style A had higher pension benefits in a large share of the macro scenarios compared to Investor Style B. Red cells represent comparisons in which Style A performed poorly relative to Style B, whereas no clear winner emerged in yellow cells. Rows with a predominance of green cells denote relatively high-performing investment styles. The mean GBF investor enjoyed higher benefits than the mean MMF+GBF investor in 97% of the macro scenarios and outperformed the mean DEF+GBF investor in 26% of scenarios. Notably, the TDFs frequently outperformed the debt-only funds, while equity Styles win large fractions across the board.

The next column in Table 4 shows the fraction of the macro scenarios where the mean Style A investor earned pension benefits greater than the mean of all other investors. The mean GBF investor beat all other mean investors in 24% of the macro scenarios, while the mean EIF investor beat all other mean investors in 73% of scenarios. The mean conservative TDF investor beat other mean investors in only 3% of macro scenarios.

The final set of columns in the table compares the benefits earned by the investor Style to an absolute threshold. All Styles earned a mean benefit of at least \$100,000 in all macro scenarios and all Styles earned at least \$200,000 in around 90% or more of macro scenarios.

**Table 4: Comparison of Mean Pension Benefits across Investor Styles**

| Investor Style A | Percent of Scenarios Where Investor Style A Has a Larger Mean Pension Benefit than Investor Style B |          |          |      |     |          |          | Percent of Scenarios Where Investor Style A Has the Largest Mean Pension Benefit | Percent of Scenarios for Which Mean Pension Benefit is at least |          |          |           |           |

Tables 5, 6, and 7 below present “heat maps” for the 10<sup>th</sup> percentile, 25<sup>th</sup> percentile, and median investors. They reflect the same underlying data as Figures 4 to 6, respectively. The patterns are largely similar to the mean investor results. Even at the lower end of the distribution, the bond-only funds earned much less than the funds with equities. See Table 6 for the 25<sup>th</sup> percentile investor: in only 8% of macro scenarios did the 25<sup>th</sup> percentile of GBF investors’ benefit exceed \$50,000. Similarly, in only 1% of macro scenarios did the 25<sup>th</sup> percentile of MMF+GBF investors’ benefit exceed \$50,000, while between 29% and 54% of the time, other investors earned at least \$50,000 at the 25<sup>th</sup> percentile.

The final “heat map” table, Table 8 shows the fraction of macro scenarios where one investor Style dominated another Style on all four statistics: the mean, the 10<sup>th</sup> percentile, the 25<sup>th</sup> percentile and the median. This is suggestive of “stochastic dominance” and indicates the dominant Style generated larger benefits for investors located at many points along the (lower half of the) distribution of outcomes. The pair-wise comparison of Styles in Table 8 is similar to that for the median in Table 7, except that the winning fraction for dominant Styles was generally lower in Table 8 where Style A must beat the competing Style on all four measures. As before, equity styles dominated non-equity styles most of the time. Among the equity styles, EIF dominated DEF because of DEF’s higher asset management fees.

**Table 8: "Stochastic Dominance" of Investor Styles**

| Investor Style A | Percent of Scenarios Where Investor Style A Has a Larger Pension Benefit than Investor Style B at the Mean and at the 10th, 25th and 50th Percentiles |          |          |      |     |          |          | Percent of Scenarios Where Investor Style A Has the Largest Pension Benefit at the Mean, 10 h, 25 h and 50th Percentiles |

**5. Conclusions**

This research, like others in this area, has potential implications for public policy and optimal retirement saving behavior. Through the scenario analysis, we examined the impact of various asset allocations on the retirement wealth of individuals, paying particular attention to the role of TDFs. Gaining a better understanding of these issues has important implications for the well-being of retired workers. Our analyses are based on complex simulations of the lifecycle, employment, and financial outcomes for US workers and require many assumptions about decision-making and specification of parameter values. Furthermore, there is no one simple way to summarize the performance of an investment strategy when the outcome of that strategy depends on

individuals' circumstances and choices and the forces exerted on them and their portfolios by the macro economy.

Subject to the caveats below, our analyses show the following results.

- The TDFs that we specified generally outperformed the specified debt-only investment Styles. In around 70% of the macro scenarios, the TDFs generated larger pension wealth for investors in the bottom half of the benefit distribution and for the mean investor. Conversely, in about 30% of future states of the world the long-term government bond fund outperformed the TDFs.
- The all-equity investment Styles that we specified outperformed TDFs, usually on the order of 60% to 80% of the macro scenarios, depending on the funds and percentiles examined. The finding that all-equity funds outperform TDFs is consistent with Poterba et al. (2005).<sup>11</sup>

These conclusions are based on projected differences in DC pension benefit accumulations generated under 500 macro scenarios; a different set of macro scenarios could produce different results. Additionally, these results are sensitive to the premium on equity returns over debt built into the model, which is assumed to be 2.0%. Many factors affect scenario results. A different equity premium could imply significantly different results. A lower equity premium—perhaps reflecting recent trends—would narrow the range between outcomes of debt and equity styles. As a result, TDFs would outperform debt-only styles less often and equity-only styles more often. For example, the conservative TDF style based on an equity premium of 1.0 percent would dominate the lower half of the returns distribution of a debt-only (GBF) style in 53 percent of the macro environments, compared with 66 percent at a 2.0 percent equity premium. The analogous figures for the conservative TDF versus an equity-only (EIF) style are 33 percent (at a 1.0 percent equity premium) and 24 percent (at a 2.0 percent equity premium). Such equity premium effects are consistent with those found in other studies.

To further investigate the benefits of TDFs, we explored TDFs' ability to insure against poor market returns just prior to retirement. We calculated the compounded rates of return on T-Bonds and on equities in the five years prior to our cohort's 65<sup>th</sup> birthday. We then selected scenarios with particularly poor equity returns or particularly large negative differences between equity and T-Bond returns during this time window. For scenarios with very poor equity returns just prior to age 65, the mean benefit for the conservative TDF outperformed most equity investment styles. For scenarios with a few years in which T-Bonds far outperformed equities, the GBF Style outperformed even the conservative TDF, but the conservative TDF did much better than the aggressive one. This suggests that the appeal of TDFs is heightened when poor equity returns occur just prior to retirement. This phenomenon deserves further attention.

Potential extensions to our work include, among others, a closer examination of the insurance properties of TDFs, as sketched above; a more complete assessment of the role of equity premiums; an account for risk preferences similar to the approach used by

---

## APPENDIX

This appendix contains tables with summary statistics of the distributions of the 10<sup>th</sup> percentiles of the present values of DC pension benefits (Table A.1), their 25<sup>th</sup> percentiles (Table A.2), and their medians (Table A.3). The tables correspond to text Figures 4, 5, and 6, respectively.

**Table A.1: Summary Statistics over Macro Scenarios of the 10<sup>th</sup> Percentile of DC Pension Benefits (\$1,000s)**

| Investment Style | Mean | P10 | P25 | Median | Inter Decile Range |
|------------------|------|-----|-----|--------|--------------------|
| GBF              | 9    | 6   | 7   | 9      | 5                  |
| MMF+GBF          | 7    | 6   | 6   | 7      | 4                  |
| DEF+GBF          | 11   | 6   | 8   | 10     | 10                 |
| DEF              | 12   | 5   | 6   | 11     | 17                 |
| EIF              | 14   | 6   | 7   | 12     | 18                 |
| Conservative TDF | 10   | 6   | 8   | 10     | 9                  |
| Aggressive TDF   | 12   | 6   | 7   | 11     | 13                 |

Note: Each investor Style was simulated under 500 macro environments. For each of these macro scenarios, we calculated the 10<sup>th</sup> percentile of present values of DC pension benefits. This table summarizes the distributions of those 10<sup>th</sup> percentiles across macro scenarios. Also see text Figure 4.

**Table A.2: Summary Statistics over Macro Scenarios of the 25<sup>th</sup> Percentile of DC Pension Benefits (\$1,000s)**

| Investment Style | Mean | P10 | P25 | Median | Inter Decile Range |
|------------------|------|-----|-----|--------|--------------------|
| GBF              | 38   | 28  | 32  | 38     | 20                 |
| MMF+GBF          | 33   | 26  | 29  | 32     | 14                 |
| DEF+GBF          | 47   | 30  | 34  | 44     | 39                 |
| DEF              | 55   | 23  | 29  | 49     | 72                 |
| EIF              | 60   | 26  | 32  | 54     | 79                 |
| Conservative TDF | 44   | 29  | 34  | 42     | 34                 |
| Aggressive TDF   | 50   | 28  | 33  | 47     | 50                 |

Note: Each investor Style was simulated under 500 macro environments. For each of these macro scenarios, we calculated the 25<sup>th</sup> percentile of present values of DC pension benefits. This table summarizes the distributions of those 25<sup>th</sup> percentiles across macro scenarios. Also see text Figure 5.

**Table A3: Summary Statistics over Macro Scenarios of the Median DC Pension Benefit (\$1,000s)**

| Investment Style | Mean | P10 | P25 | Median | Inter-<br>Decile<br>Range |
|------------------|------|-----|-----|--------|---------------------------|
| GBF              | 136  | 102 | 115 | 133    | 70                        |
| MMF+GBF          | 119  | 94  | 105 | 118    | 52                        |
| DEF+GBF          | 168  | 108 | 124 | 160    | 132                       |
| DEF              | 205  | 89  | 110 | 181    | 257                       |
| EIF              | 225  | 96  | 119 | 197    | 285                       |
| Conservative TDF | 156  | 105 | 124 | 148    | 115                       |
| Aggressive TDF   | 181  | 104 | 123 | 168    | 173                       |

Note: Each investor Style was simulated under 500 macro environments. For each of these macro scenarios, we calculated the median present value of DC pension benefits. This table summarizes the distributions of median benefits across macro scenarios. Also see text Figure 6.

# Investor Bulletin: Target Date Retirement Funds

May 6, 2010

Investing for retirement can be complex. When deciding where to invest, you may need to make a variety of decisions, including how to balance the risk of losing money with the desire to increase your returns, keeping in mind that inflation may reduce the purchasing power of your savings and you or your spouse or partner may live longer in retirement than you expect. Recognizing this, a number of companies offer "target date retirement funds," sometimes referred to as "target date funds" or "lifecycle funds."

These funds are designed to make investing for retirement more convenient by automatically changing your investment mix or asset allocation over time. Asset allocation involves dividing an investment portfolio among different asset categories, such as stocks, bonds, and cash investments. Once you select a target date fund, the managers of the fund make all the decisions about asset allocation.

Target date funds are often available through 401(k) plans. Some 401(k) plans use these funds as the default investment for plan participants who have not selected their investments under the plan. Both before and after investing in a target date fund, consider carefully whether the fund is right for you.

## ***Target Date Retirement Fund Basics***

Target date funds, which are often mutual funds, hold a mix of stocks, bonds, and other investments. Over time, the mix gradually shifts according to the fund's investment strategy. Target date funds are designed to be long-term investments for individuals with particular retirement dates in mind. The name of the fund often refers to its target date. For example, you might see funds with names like "Portfolio 2030," "Retirement Fund 2030," or "Target 2030" that are designed for individuals who intend to retire in or near the year 2030.

However, target date funds, even if they share the same target date, for example 2030, may have very different investment strategies and risks. They do not guarantee that you will have sufficient retirement income at the target date, and you can lose money. Target date funds do not eliminate the need for you to decide, before investing and from time to time thereafter, whether the fund fits your financial situation. Even if you plan to retire in 2030, you may decide, based on your investment objectives, tolerance for risk, and other assets, that a 2020, 2040, or other target date fund is more appropriate for you. Or you may decide that you don't want to invest in a target date fund.

Most target date funds are designed so that the fund's mix of investments will automatically change in a way that is intended to become more conservative as you approach the target date. Typically, the funds shift over time from a mix with a lot of stock investments in the beginning to a mix weighted more toward bonds.

Remember that all investments have some level of risk, regardless of whether they are stocks, bonds, or something else. Even with the same type of investment, some stocks have less risk than other stocks, and some bonds have more risk than other bonds.

Although bonds are often considered to be less risky than stocks, some types of bonds may be riskier than stocks.

You should evaluate the investments and decide how much risk you can tolerate. Your risk tolerance will likely change as you get closer to retirement, so it is critical to pay attention to what the target date fund invests in over time. Also, be aware that while a target date fund discloses what it invests in and how the investment mix will shift over time, the fund manager can make changes in the future without your approval – even if those changes will create more risk. Thus, you should monitor your target date fund's investments over time.

### *Evaluating a Target Date Retirement Fund*

As with any investment, evaluate a target date fund carefully before investing. The target date may be a useful starting point in selecting a fund, but you should not rely solely on the date when choosing a fund or deciding to remain invested in one. You should consider the fund's asset allocation over the whole life of the fund and at its most conservative investment mix, as well as the fund's risk level, performance, and fees. This information is available in the fund's prospectus.

As noted above, funds with the same target date may have different investment strategies and levels of risk. These variations may occur before the target date, and also at the target date and after it. Some target date funds may not reach their most conservative investment mix until 20 or 30 years after the target date, as shown in Example 1 below. Others may reach their most conservative investment mix at the target date or soon after, as shown in Example 2 below.

The fund in Example 1 holds 60% of its investments in stocks at the target date and 40% in bonds. The investment in stocks decreases until 25 years after the target date when it reaches an investment mix with 30% in stocks.

The fund in Example 2 holds 25% in stocks at the target date, and reaches its final investment mix with 20% in stocks five years later. The fund in Example 2 also holds cash investments (such as money market funds) as part of its mix.

Target date funds also may have different investment results and may charge different fees, even with the same target date. Often a target date fund invests in other mutual funds, and fees may be charged by both the target date fund and the other funds. Keep in mind that a fund with high costs must perform better than a low-cost fund to generate the same returns for you. Even small differences in fees can translate into large differences in returns over time.

You should also consider how a target date fund fits in with your other investments. If you have other stock, bond, or mutual fund investments, you should carefully examine your overall asset allocation.

In summary, before investing in a target date fund:

- **Consider your investment style.** Do you want to play an active role in managing your investments, or do you prefer the more hands-off approach of a target date fund? Keep in mind, however, that even with a target date fund, it is important to monitor the fund's investments over time.
- **Look at the fund's prospectus to see where the fund will invest your money.** Do you understand the strategy and risks of the fund, or of any underlying mutual funds held as investments?
- **Understand how the investments will change over time.** Are you comfortable with the fund's investment mix over time? In particular, make sure you understand when the fund will reach its most conservative investment mix and whether that will occur at or after the target date. Does your level of risk tolerance match how aggressive or conservative it is?
- **Take into account when you will access the money in the fund.** How does the fund's investment mix at the target date and thereafter fit with your plans for the future, whether they are to withdraw your money at retirement, or to continue to invest?

- **Examine the fund's fees.** Do you understand the costs for both the target date fund and for any mutual funds in which the target date fund invests?

Ali,

March 26 at 4-5 pm will work for us. Thus far, the attendees will be:

Eileen Rominger, Director of Investment Management  
Lourdes Gonzalez, Acting Co-Chief Counsel, Division of Trading and Markets  
Doug Scheidt, Associate Director and Chief Counsel, Division of Investment Management  
Diane Blizzard, Senior Advisor to the Director of Investment Management  
Sara Crovitz, Branch Chief, Division of Investment Management  
Catherine Courtney, Attorney-Adviser, Division of Investment Management

If you could please let me know who will be attending the meeting from the DOL, I would greatly appreciate it. I'll let you know if there are any changes to our attendee list.

Thanks so much,  
Holly.

Holly Hunter-Ceci

**Subject:** RE: Meeting request

Hi Holly,

Just to follow up on my voice mail from this morning, I wanted to check in and see if either April 26 from 4-5 pm or April 29 from 4-5 pm work for you all to come over to DOL.

Thanks  
Ali

**To:** Wong, Fred - EBSA  
**Subject:** Meeting request

Fred,

I work in the SEC's Division of Investment Management in the Office of Chief Counsel. I'm writing at the request of our Division director, Eileen Rominger, to see if a small group from IM (including Eileen), and from the Division of Trading and Markets, could meet to discuss the DOL's fiduciary proposal with Assistant Secretary Phyllis Borzi and other interested parties. Please let me know if you are not the correct person to contact; I thought of you because you were listed on the release and because we participated in a brief conference call many, many months ago.

My contact info is below if you (or someone else) would like to discuss. As far as timing, we would be most interested in a meeting after EBSA has had a chance to go through the recent comments submitted after the hearing. We would be happy to meet at the DOL or at the SEC, whichever you prefer.

I greatly appreciate any assistance. Many thanks,

Holly.

Holly Hunter-Ceci  
Senior Counsel  
Office of Chief Counsel, Division of Investment Management  
Securities and Exchange Commission

Ali, here is our updated list.

Eileen Rominger, Director of Investment Management  
Jennifer McHugh, Senior Advisor to the Chairman  
Jamie Brigagliano, Deputy Director, Division of Trading and Markets  
Lourdes Gonzalez, Acting Co-Chief Counsel, Division of Trading and Markets  
Doug Scheidt, Associate Director and Chief Counsel, Division of Investment Management  
Susan Nash, Associate Director, Division of Investment Management  
Dave Grim, Assistant Chief Counsel, Division of Investment Management  
Diane Blizzard, Special Assistant to the Director of the Division of Investment Management  
Sara Crovitz, Branch Chief, Division of Investment Management  
Katy Courtney, Attorney-Adviser, Division of Investment Management

I'll be out of the office tomorrow, so unfortunately I will miss the meeting. If anything comes up tomorrow, please contact Katy Courtney at [REDACTED]@sec.gov, [REDACTED]. Katy will also be at the meeting. Thanks again for making time in your busy schedule to meet with us.

Thanks,  
Holly.

**Subject:** RE: Meeting request

Holly,

My sincere apologies, but due to some scheduling changes on our end this time no longer works for us, as one of the key participants can no longer attend. I've included some alternates below - if none of them work, please give me a call and hopefully we can figure something out (I'm at [REDACTED]).

4/28: 2 pm  
4/29: 2:30 pm, 3 pm, or 4 pm

Thanks in advance and sorry once more for the change.

Ali

# Is Your 401(k) Default Fund on Target? New DOL and SEC Guidance on Target Date Funds

Beth J. Dickstein  
Sidley Austin LLP

© Copyright  
DOL Conflict of Interest Rulemaking 000610

# Topics to Cover

- Best practices for plan fiduciaries in choosing and monitoring target date funds
- Understanding a target date fund's glide path
- Evaluating the fees of target date funds
- Advice to participants on how target date funds operate
- Increased disclosure when a target date fund is the plan's qualified default investment alternative
- DOL Guidance
- SEC proposed regulation relating to advertising of target date funds
- Proposed effective date of SEC rules to marketing and other sales literature relating to target date funds

# Basics

- Definition: funds that “provide varying degrees of long-term appreciation and capital preservation through a mix of equity and fixed income exposures based on the participant’s age, target retirement date (such as normal retirement age under the plan) or life expectancy.”
- Intended to be an “investment solution.”
- Each target date fund generally is intended for participants with a target retirement year within a narrow band of years (such as a five year period).
- Glide Path – the investment strategy for shifting investments to a more conservative portfolio.
- Can be a “fund of funds,” which invests in other funds or a “stand alone” product, which invests directly in a diversified portfolio of assets.

# Glide Path

- Higher risk investments at early age.
- Eventually reaches a “landing point” at which time the asset allocation becomes static.
- Glide path may flatten at the target retirement date.
- Alternatively, glide path may flatten near end of life expectancy.
- Different views on when equity investments should be significantly reduced.

# Allocations Used in Glide Paths of Different Funds

- 2008 returns for 2010 target date funds ranged from -3.6% to -41%.
- Due to wide variation in asset allocations.
- Vanguard - 90% equity at age 40 and younger, declining to 50% at age 65 and 30% by age 72.
- Fidelity – 50% equity at the target date, declining to 20% about 15 years after the target date.
- Bernstein – equity/bond allocation of 60%/40% at age 65.

# Fund of Funds Products

- Mutual fund target date funds – exempt from the fiduciary duty and self dealing prohibited transaction restrictions of ERISA.
- Plan asset target date funds (e.g., bank collective investment funds) – subject to the fiduciary duty and prohibited transaction provisions of ERISA.
- Conflicts of interest?
- Layering of fees?

# Benchmarks

- Lack of accepted industry benchmarks.
- Benchmarks have been established by Morningstar, Dow Jones, Target Date Analytics, and Standard and Poor's.
- Benchmarks of Morningstar Dow Jones and Target Date Analytics are based on each entity's hypothetical optimal glide-path.
- S&P's benchmarks are based on the average allocations of target date funds.
- Difficult to evaluate performance without accepted benchmark.

# Summary of Developments

- Designation as a Qualified Default Investment Alternative by DOL Regulations (12/07).
- ERISA Advisory Council hearing and report (2008).
- Senate Committee Hearing (2/09).
- Joint Hearing by the DOL and Securities and Exchange Commission ("SEC") (6/09).
- DOL Guidance
- SEC Proposed Rule Amendments

# 404(c)(5) Regulations – Target Date Funds as a QDIA

- Effective December 24, 2007.
- Named target date funds as a QDIA.
- Growth in assets invested in target date funds.
- Growth in the number of target date funds available.

# 2008 ERISA Advisory Council Hearing

- Working group requested testimony on various issues including the following:
  - What retirement and participant assumptions should be used when selecting and monitoring target date funds?
  - How does a plan fiduciary evaluate and monitor target date funds when there is no standardized benchmarking methodology?
  - What investment education and communication is required for participants to enable them to invest in target date funds or to assess whether they should actively manage their own investment?
  - What are the different types of target date funds?

# 2008 ERISA Advisory Council Hearing

(continued)

- The working group described plan participants' general need for investment education.
- The working group believes that target date funds could provide a solution to participants' general lack of knowledge/interest in plan investing.
- Working Group Recommendations:
  - The DOL should reinforce ERISA requirements relative to plan investments in target date funds.
  - The DOL should develop participant education materials and illustrations to enhance awareness of the value and the risks associated with target date funds.

# Senate Committee Hearing

- February, 2009 Hearing by U.S. Senate Special Committee on Aging.
  - Concern over retirement security.
  - Focus on target date funds.
  - Senator Herb Kohl, Chairman, sent letters to the Secretary of Labor and the Chairwoman of the SEC urging review of target date funds.

# Joint Hearing by the DOL and SEC

- In response to Senator Kohl's letter, the DOL and SEC held a joint hearing in June, 2009.
- DOL and SEC expressed concerns regarding:
  - Differences in the glide paths;
  - Variance in investment returns between funds with the same target retirement date;
  - Participant disclosure and understanding; and
  - Whether regulatory change or other reform is needed.

# Joint Hearing by the DOL and SEC

(continued)

- Testimony focused on certain topics, including:
  - Importance of target date funds as a “simple” alternative.
  - Reasons for differences in glide paths.
  - Need for equity investments after retirement.
  - Whether target date funds should be customized.

# Joint Hearing by the DOL and SEC

(continued)

- Whether participant disclosure is adequate.
- Considerations for plan fiduciaries in selecting target date funds.
- Suggestions for additional regulation.

# Should the Glide Path be Regulated?

- The Certified Financial Planner Board argues that acceptable allocation ranges should be established.
  - Help align risks with participants' expectations.
- ICI and Profit Sharing Council of America do not believe that either the SEC or the DOL should regulate the ranges of asset allocations.
  - Regulation generally would be unprecedented - except for investments in employer securities and real property, ERISA does not limit types of acceptable investments.

# Joint DOL/SEC Guidance

DOL intends to issue 3 pieces of guidance:

1. Initial joint DOL/SEC guidance titled “Investor Bulletin: Target Date Retirement Funds”, issued 5/6/2010;
2. Best practices checklist; and
3. Amendment to the QDIA regulation as it relates to target date funds.

# Joint DOL/SEC Guidance (continued)

## Investor Bulletin (Issued May, 2010)

- Discusses basics of target date funds:
  - Target date funds are designed to be long-term investments for individuals with particular retirement dates in mind.
  - No guarantee that participant will have sufficient retirement income at the target date.
  - Fund disclosure describes the types of investments and how the investment mix will shift over the life of the fund.
  - Can change so monitor fund's investments over time.

# Joint DOL/SEC Guidance (continued)

## Investor Bulletin (Issued May, 2010)

- Evaluating a Target Date Fund:
  - Review the fund's asset allocation over the entire life of the fund.
  - Review the fund's asset allocation at its most conservative investment mix.
  - Review the fund's risk level.

# Joint DOL/SEC Guidance (continued)

## Investor Bulletin (Issued May, 2010)

- Evaluating a Target Date Fund:
  - Review the fund's performance.
    - Should participants reference a particular benchmark?
  - Review the fund's fees.
    - What should a participant review?

# SEC Proposed Amendments

- Proposed amendments to rule 482 under the Securities Act.
- Proposed amendments to rule 34b-1 under the Investment Company Act.
- Proposed amendments to rule 156 under the Securities Act.

# Rule 482

## Background

- Rule 482 under the Securities Act permits investment companies to advertise information prior to delivery of a statutory prospectus.
- Such advertisements are “prospectuses” under Section 10(b) of the Securities Act.
- Proposed amendment applies to advertisements and supplemental sales literature that “place a more than insubstantial focus on one or more target date funds.”
- Amendments apply whether or not the target date fund is a QDIA.

# Rule 34b-1

## Background

- Rule 34b-1 under the Investment Company Act sets forth the requirements for supplemental sales literature.
- Under Rule 34b-1, a communication sent after the effective date of a fund's registration statement is not deemed a "prospectus" if a statutory prospectus was sent to a person prior to or at the same time the applicable communication was sent to such person.

# Proposed Amendments to Rule 482 and Rule 34b-1

Disclose in print advertising:

- Investor should consider age or retirement date, as well as other factors, including the investor's risk tolerance, personal circumstances, and complete financial situation.
- Investment is not guaranteed and could loss money.
- Circumstances under which allocations can be modified without a shareholder vote.
- If the fund uses a year in its name, describe the intended allocation as of that year and the allocation as of the last quarter and specify that those allocations are as of such times.

# Proposed Amendments to Rule 482 and Rule 34b-1 (continued)

Disclose in print advertising for more than one fund:

- A prominent table, chart, or graph that clearly depicts the asset allocations over the entire life of the funds:
  - at identified periodic intervals (no longer than 5 years)
  - at the inception of the funds
  - at the target dates
  - at the “landing points” (date of static asset allocation)
  - at the most recent quarter end

Radio or TV ads must state the landing point, explain that the asset allocation becomes fixed at the landing point, and describe the intended allocations at the landing point.

# Rule 156

## Background

- Rule 156 under the Securities Act contains guidance on the types of information in investment company sales literature that could be misleading.
- It applies to all sales literature, whether or not delivered with the fund's prospectus.
- Under rule 156, whether a statement is misleading depends on the context in which the statement is made.
- Rule 156 outlines certain situations in which a statement could be misleading.

# Proposed Amendments to Rule 156

- Proposing to amend rule 156 to address certain statements suggesting that securities of an investment company are an appropriate investment.
- Will apply to all types of investment companies.
- Such a statement could be misleading because of the emphasis it places on a single factor, such as an investor's age or tax bracket, as the basis for determining that an investment is appropriate.
- Such statement could be misleading because of representations, whether express or implied, that investing in the securities is a simple investment or that it requires little or no monitoring by the investor.

# Effective Date of SEC Amendments

- Changes to Rule 482 will apply to target date fund advertisements and supplemental sales literature that are used 90 days or more after the effective date of the amendments.
- Rule 156 changes will be effective immediately upon adoption.

# SEC Comments Requested

## SEC requests comments on:

- Does the proposed definition of “target date fund” cover the types of funds that should be subject to the proposal?
- Is it appropriate to limit application of the amendments to marketing materials that place a more than insubstantial focus on one or more target date funds?
- Should the SEC prescribe specific asset classes to be used in disclosing the asset allocation or the methodology for calculating the percentage allocations ?
- Are there additional amendments that would effectively address the concerns relating to target date fund names?
- Should the prospectus requirements provide specific disclosure requirements for target date funds?

# SEC Comments Requested

(continued)

## SEC requests comments on:

- Should specific materials be exempted from the rule?
- Should the SEC prescribe the specific format for the asset allocation disclosure?
- Do investors need other information along with allocation percentages in order to understand the significance of those percentages (such as risks, and volatility of different asset classes)?
- Should there be disclosure whether the glide path extends to the target date or through the life expectancy of the investor?
- Should the prospectus specify a manager's discretion to change the glide path?

# SEC Comments Requested

(continued)

## SEC requests comments on:

- Will the disclosure of a target date fund's asset allocation be an effective way to reduce investor misunderstanding?
- Will the disclosure cause investors to prioritize investment risk at a particular moment in time over longevity risk, inflation risk, or other risks?
- Should the proposal be modified to address any impact that it may have on investor or manager behavior?
- Are there other means to enhance comparability among target date and current asset allocations?
- Are the proposed effective dates appropriate?

Comments due August 23, 2010

# Possible Legislative Actions

- Possible legislation that will require target date fund managers to take on a fiduciary responsibility in order for such funds to be eligible for the designation of QDIA.
- Response to Avatar testimony in Senate hearings and DOL advisory opinion.
- DOL issued advisory opinion to Avatar stating that manager of a target date mutual fund does not become a fiduciary under ERISA merely because the target date fund invests in affiliated funds.

# Is More Regulation Needed?

- Wide differences of opinion.
- Those advocating for additional regulation want:
  - More regulation of disclosures and naming conventions;
  - Specified ranges of asset allocations; and
  - Limitation of mutual fund exception from regulation under ERISA.

# Is More Regulation Needed?

- Those against more regulation state:
  - Existing disclosure rules are sufficient;
  - Regulation of disclosure would not make participants read the disclosure; and
  - Having the DOL and SEC prescribe acceptable asset allocation ranges would be unprecedented and likely unsuccessful.

# Target Date Funds and Retirement Savings

March 2010

A study by Deloitte Financial Advisory Services LLP in conjunction with Advanced Analytical Consulting Group Inc. for the U.S. Department of Labor, Employee Benefits Security Administration.

## Introduction

Target Date Funds (“TDFs”, also known as life cycle funds) have become an important component of individual retirement decisions. TDFs are investment vehicles that invest their assets into other mutual funds. A key aspect of TDFs is that the asset allocation changes over time such that the investment risks diminish as the fund’s target date approaches. For example, a lifecycle fund with a 2030 target year is generally marketed to Defined Contribution (“DC”) plan participants who aim to retire around 2030. Its investment strategy would become more conservative as the target date approaches. The underlying idea is that the risk workers should take on should diminish as their investment horizon shortens.<sup>1</sup> Some of the earliest TDFs were developed in the mid-1990s and many fund managers now offer a series of lifecycle funds. Evidence suggests that 70 percent of U.S. employers now use target-date funds as their default investment (Collins, 2009). The Thrift Savings Plan, a DC plan for federal employees, added life cycle funds to its investment options in 2005.

Typically, DC plan participants have choices over how to invest their retirement assets, in stocks, bonds, money market funds and mutual funds. The purpose of the work described in this report is to gain a better understanding of how TDFs can affect the accumulation of retirement wealth compared to other asset holdings. To that end, the U.S. Department of Labor (“DOL”) requested that we use the micro-simulation model PENSIM to examine the distribution of DC benefits accumulated by investors under various asset allocation strategies.

## 1. Background

As noted above, TDFs were first offered in the 1990s and have grown steadily in popularity. Recent estimates suggest that over \$227 billion dollars are invested in these types of funds (Donahue 2009). The Pension Protection Act of 2006 (PPA) designated target-date funds as one of the qualified default investment alternatives (QDIAs). In December 2008, 31 percent of 401(k) participants held TDFs (VanDerhei, et al. 2009).

TDFs have a common feature of a predetermined declining equity exposure as the participant approaches the target retirement date. In practice, there are significant differences in the equity glide paths chosen by different fund families and offered by different plans. Our earlier research for EBSA on actual funds suggested that TDFs generally have over 90 percent equity exposure several decades before the target date, declining to 20 to 60 percent at the target dates.

Several papers have used stochastic simulation models to examine, among other things, the role of TDFs in the accumulation of retirement wealth. One of the key papers on this topic is Holmer (2009a). This paper utilizes the PENSIM software to conduct the analysis. Under different assumptions of assumed risk aversion and different TDF asset

---

<sup>1</sup> See Viceira (2009) and Kintzel (2007) for a general description of the underlying characteristics of TDFs.

allocation assumptions, Holmer simulates risk-adjusted retirement (OASDI, DB and DC) and pension (DB and DC) benefits at age 70 for a U.S. cohort born in 1990. It is important to note that our work utilizes many of the same methodological, individual and macroeconomic assumptions as presented in this paper. There are a number of important findings in this paper. Holmer finds, for example, that the highest risk-adjusted pension benefit is obtained when following a rule that mimics actual TDFs—equity investment shares of 75 to 80 percent at age twenty declining to 30 to 35 percent at age 65. He also finds that at lower levels of risk aversion, risk-adjusted pension benefits are greater when there is a greater share of equities available in the life cycle fund. Expanding the analysis to include OASDI, he finds that the low risk associated with these benefits suggests that higher overall risk-adjusted benefits can be found by taking on more risk in the other investment components (i.e., a higher equity percentage in the life cycle fund).

Another paper that is similar to our work is Poterba et al. (2005). In this paper the authors consider how different asset allocation strategies impact the retirement wealth and expected utility of wealth for a cohort of individuals in the Health and Retirement Study. Like the analysis we present below, the authors consider a variety of possible asset allocation rules including ones that include only one asset (100 percent inflation-indexed bonds, long-term government bonds, or corporate stock), ones that include a mixture of two assets using a simple allocation rule (i.e., equity percent equals 110 minus age of household head), and ones based on actual TDFs available in the market. Interestingly, their simulated wealth measures suggest that allocating 100 percent in equities leads to the greatest wealth at retirement. They also suggest, however, that their results are sensitive a number of the parameters including the assumed return on equities. TDFs, on the other hand, appear to perform about as well as simpler asset allocations in which the equity exposure over time is equal to the average of that found in a market TDF.

Finally, Pang and Warshawsky (2009) use a stochastic simulation model to consider the risk and return tradeoffs of life cycle funds. An interesting feature of their paper is that they consider five different actual TDFs for analysis. They recognize that not all TDFs are the same even if they have the same target date. The funds are chosen for analysis by specific percentiles of equity share (95<sup>th</sup>, 75<sup>th</sup>, 50<sup>th</sup>, 25<sup>th</sup>, and 5<sup>th</sup> percentiles) out of all funds available on a selected date. They focus on the wealth and level of risk at age 65 for individuals who invested in TDFs early in their careers, in the middle of their careers, and at retirement. One of their results suggests that TDFs are not without risk and there is variation in the risk levels across the various funds.

## **2. The PENSIM Software**

### Overview of the PENSIM software

As directed by DOL, this project uses the software developed by the Policy Simulation Group (“PSG”) for producing estimates of individual benefits under the employer-

sponsored pension system in the US.<sup>2</sup> Our analyses mainly use two of the PSG's three computer simulation models. SSASIM provides the "projections of key macrodemographic and macroeconomic assumptions, as in the 2009 OASDI Trustees Report." The second model, PENSIM, uses the SSASIM macro projections to microsimulate the accumulation patterns of a cohort of individuals covered by employer-sponsored pensions. The third model, GEMINI, was used in the simulations only to obtain certain pension related outputs.

The models consist of numerous equations that predict marriage, employment, job changes, pension plan availability, death and other outcomes for each individual. Additionally, the models project annual rates of return on assets chosen by the individual as well as contributions and withdrawals. In its simplest form, each run of the PENSIM model, with macro conditions projected from SSASIM for each year of the simulation, produces paths of employment income, pension wealth from various sources and other financial measures over time for each individual. Many of these quantities can be accessed from the various output tables.

We use the functionality of the PSG models that allows multiple-scenario runs that simulate the outcomes for each individual under "stochastic pension environments." The values of the macrodemographic and macroeconomic variable change across the various scenarios, which may be interpreted as future states of the world. This generates a number of possible paths for each individual. Specifically, fifteen major variables are assumed to be stochastic: total fertility rate, net immigration flow, mortality decline rate, female and male labor force participation rates, unemployment rate, inflation rate, productivity growth rate, wage share growth rate, hours worked growth rate, nominal interest rate on Treasury bonds, disability incidence rate, disability recovery rate, equity return, and the rate spread between Treasury bills and Treasury bonds.<sup>3</sup> Macroeconomic scenarios result in different pension wealth accumulation outcomes because of variation in rates of return on equity and bonds, but also because different economic conditions affect wages and DC plan contributions. Much of our analysis studies the differences in the distributions of pension wealth accumulation across 500 scenarios with different macro conditions.<sup>4</sup>

Our analysis focuses on the effects of TDFs, as compared to other investments, on the accumulation of DC pension benefits. We ignore the wealth accumulated through the Social Security system and wealth from defined benefit ("DB") pension plans.<sup>5</sup> As a

---

<sup>2</sup> Description of software is drawn from Holmer (2009b). In particular, we use the the standard version of December 18, 2009. Our use of the PSG models described herein was at the direction of DOL.

<sup>3</sup> See Holmer (2009d), page 11.

<sup>4</sup> These 500 scenarios represent a sample of potential states of the macro economy; they do not represent all potential states of the world. It is conceivable that under certain other scenarios, our findings might be different.

<sup>5</sup> In the PSG models, employers' offerings of DB and DC plans are exogenous to the individual (that is, workers do not sort into jobs that offer particular pension plans). Additionally, retirement decisions are assumed not to depend on accumulated retirement wealth. Under these conditions, we assume that DB and Social Security wealth are exogenous or held constant for the individual and we are comfortable focusing on differences in DC pension accumulations.

result, our analysis is not a complete accounting of the accumulated retirement wealth of individuals.

In general, we make very few changes to the parameter values in the baseline equations in the PSG models. We change the specifications of investor styles, described in detail below, but otherwise run the models with their default parameter values. A sensitivity analysis of the underlying models and verification of parameter choices is beyond the scope of this paper.

### Investment options

PENSIM allows for a variety of equity and debt investment options. SSASIM uses historical data to estimate the parameters that determine the cyclical dynamics of four stochastic macroeconomic variables—the inflation rate, the nominal yield on Treasury bonds, the return on equities, and the yield spread between Treasury bills and Treasury bonds—that determine asset returns. Cyclical fluctuations in these four macroeconomic variables are generated using a vector-autoregressive model with a two-year lag structure, a VAR(2) model, the parameters of which are estimated with annual historical data.<sup>6</sup>

Table 1 below summarizes the characteristics of available investment options.

| <b>Asset Class</b>            | <b>Base Return*</b> | <b>Asset Fee</b> | <b>Shock to Return</b> |                |
|-------------------------------|---------------------|------------------|------------------------|----------------|
|                               |                     |                  | <b>Mean</b>            | <b>Std Dev</b> |
| Equity Index Fund (EIF)       | S&P500              | 0.45%            |                        |                |
| Diversified Equity Fund (DEF) | S&P500              | 1.00%            | 0                      | 1%             |
| Portfolio of stocks (Stocks)  | S&P500              | **               | 0                      | 10%            |
| Government Bond Fund (GBF)    | T-Bonds             | 0.45%            |                        |                |
| Money Market Fund (MMF)       | T-Bills             | 0.45%            |                        |                |
| Target Date Fund              | Depends***          | 0.75%            |                        |                |

\* SSASIM generates fixed-income base returns based on intermediate assumptions of the 2009 OASDI Trustees Report. Equity base returns are assumed to be 2.0 percent above T-Bonds returns, on average.

\*\* The Stocks portfolio is used only as part of TDFs with a 0.75% asset fee.

\*\*\* TDF return depends on the age-specific mix of assets held in the fund.

*Equities:* The equity investments range from a portfolio of relatively few stocks, to a fund that is diversified but not as much as the Standard and Poor's 500 ("S&P500") index, to an equity index fund that mimics the S&P500. The S&P500 returns are generated as described above. The less diversified equity options have returns that are equal to the S&P500 return plus a shock ( $\epsilon$ ) drawn from a distribution that can be specified by the user. Table 1 shows the default distributions used in PENSIM and suggests a wider variance for less diversified holdings.

<sup>6</sup> See Holmer (2009d), page 14. The PENSIM user may change these parameters.

*Debt:* US Treasury bills and bonds are available. The returns on T-Bonds are generated as described above; T-Bill returns are a fraction of T-Bond returns.

*TDFs:* TDFs are age-variant portfolios of equities and debt. TDFs can hold T-Bills, T-Bonds, Equity Index Fund, and a portfolio of stocks specific to the TDF, where the weights on each asset can change as the holder ages. The return on a TDF in any year depends on the specific mix of assets in the fund.

Each individual holding a particular asset realizes the same annual return on the asset. No asset beats the market (i.e., S&P500) consistently. In the stochastic runs, 500 macro scenarios are characterized by different values of asset rates of return, inflation and other variables drawn from distributions embedded in the SSASIM module. The macro draws affect the real returns on the asset holdings over the individual's lifetime and, therefore, her accumulated retirement wealth.

### **3. Descriptions of Scenarios and Investor Styles**

#### Specifications of Macro Scenarios and Investor Styles

Each simulation selects a 0.5% sample of individuals from the 1995 birth cohort, or about 30,000 individuals whose lifecycle and employment outcomes and asset returns are generated by PENSIM. In the stochastic runs, individual outcomes are generated for 500 macro scenarios using a Run Specification File (.rsf) in the standard version of PENSIM.

We investigate the effects of various investment strategies by assigning individuals to investor Styles that we specify. PENSIM allows up to four Styles to be specified in each run and a probability of assignment to each Style.<sup>7</sup> Our strategy is to run different sets of macro scenarios with all individuals assigned to one Style and compare outcomes across runs. This has several advantages. First, we can specify more than four Styles. Second, it is not necessary to specify the fraction of individuals in each Style. Third, we observe the full sample of 30,000 individuals in each Style. One disadvantage of our approach is that we cannot easily combine our sets of investors to represent the population or mimic the aggregate asset allocations of DC plan investors in the US.

#### Sources of Variation in Pension Outcomes

Across 500 macro scenarios there are two principal types of variation in the individual's accumulation of DC benefits. First, there are different future states of the world (macro environments) as described earlier that affect rates of return. The SSASIM software generates different values for each macro variable for each scenario. Second, across macro scenarios, individuals realize different outcomes for education, income, death date

---

<sup>7</sup> In the PENSIM module, the Style definitions are found in the *ACCTAA1*, *ACCTAA2*, *ACCTAA3*, and *ACCTAA4* tables, which allows the user to specify asset allocation weights at various ages; TDFs are specified in *Assets tdf\_aa\_id*. The probabilities for assignment into each Style are specified in *AA\_PROB* table and can change over calendar years. The individual's Style is fixed over her lifetime, but the Style definition is very flexible and allows for a number of investment strategies to be modeled. PENSIM's baseline Style definitions and their probabilities produce aggregate asset allocations similar to that found in a very large sample of 401 plans (Holmer (2009c), page 226).

and other lifecycle and employment outcomes. This prevents a comparison of individual outcomes across macro scenarios, because important characteristics of the individuals vary across macro scenarios. In other words, each macro scenario in effect represents a different sample of individuals experiencing the specific macro conditions in that scenario. In particular, the plan contributions made by a specific individual differ across macro scenarios. In what follows we compare the outcomes for all samples of individuals across macro scenarios while only focusing on differences generated by the macro variables and ignoring other differences across individuals.<sup>8</sup>

When we change the investor style across runs, the individual’s lifecycle and employment outcomes are fixed for each macro scenario. For example, in one comparison below, we assign all individuals to a fund filled only with T-Bonds and run 500 macro scenarios. In another run, we assign all individuals to an equity index fund and run the same 500 macro scenarios. Individual lifecycle and employment outcomes are the same, macro scenario by macro scenario, while the DC benefit accumulation changes according to the asset holdings and the macro influences on the returns for that asset. This allows comparisons at the individual level across the Style assignments in different runs, but as mentioned above not across macro scenarios within the same run.

Investor Styles

The table below defines our investor Styles, which are characterized by the fraction of the individual’s DC pension wealth in each asset class at each age.<sup>9</sup>

|                               | <b>1:<br/>DEF</b> | <b>2:<br/>GBF</b> | <b>3:<br/>EIF</b> | <b>4:<br/>DEF+<br/>GBF</b> | <b>5:<br/>MMF<br/>+GBF</b> | <b>6: TDF<br/>Conservative</b> |      | <b>7: TDF<br/>Aggressive</b> |      |
|-------------------------------|-------------------|-------------------|-------------------|----------------------------|----------------------------|--------------------------------|------|------------------------------|------|
| Age                           |                   |                   |                   |                            |                            | 14                             | 65   | 14                           | 65   |
| Equity Index Fund (EIF)       |                   |                   | 100%              |                            |                            |                                |      |                              |      |
| Diversified Equity Fund (DEF) | 100%              |                   |                   | 50%                        |                            |                                |      |                              |      |
| Money Market Fund (MMF)       |                   |                   |                   |                            | 50%                        |                                |      |                              |      |
| Government Bond Fund (GBF)    |                   | 100%              |                   | 50%                        | 50%                        |                                |      |                              |      |
| Target Date Fund              |                   |                   |                   |                            |                            | 100%                           | 100% | 100%                         | 100% |
| GBF                           |                   |                   |                   |                            |                            | 9%                             | 79%  | 9%                           | 39%  |
| MMF                           |                   |                   |                   |                            |                            | 3%                             | 3%   | 3%                           | 3%   |
| EIF                           |                   |                   |                   |                            |                            | 44%                            | 9%   | 44%                          | 29%  |
| Stocks                        |                   |                   |                   |                            |                            | 44%                            | 9%   | 44%                          | 29%  |

<sup>8</sup> In essence, this means that the sample of individuals changes across macro scenarios. This feature where individual lifecycle and employment outcomes change across macro scenarios may prevent some types of analyses of interest to some researchers.

<sup>9</sup> In PENSIM, the individual is assumed to rebalance her portfolio to achieve the defined mix at each age, rather than change the flow of contributions and withdrawals to achieve the defined mix over time.

Styles 1 through 3 represent single-asset investors who choose the same asset over their investing lifetimes. Styles 4 and 5 are investors who split their assets between a diversified equity fund and either money market funds or government bond funds, with the same weighting between the two assets over their investing lifetime.

We construct two TDF options. The conservative TDF (Style 6) starts out heavily invested in equities (44% in equity index fund and 44% in other stocks) and the equity fraction declines linearly over time until age 65 when the equity fraction is 18%. The aggressive fund (Style 7) starts out with the same allocation as the conservative TDF, but stays more heavily weighted in equities, achieving 58% in equities by age 65. The glide paths for each of the TDF options are shown in Figures 1 and 2.<sup>10</sup>

## 4. Results of Scenario Analyses

### Metrics and Methods

The measure of pension wealth we use in our analysis is the present value at age 65 of DC pension benefits expressed in 2009 dollars; the cohort in our analysis, born in 1995 reaches age 65 in the year 2060. In the PSG models, this is variable *ipvpb* and it represents the present value of the individual's lifetime stream of DC pension benefits as of age 65 (plus her DB cash balance accumulations, which tend to be small and are inseparable from the DC benefits in the PSG models).

In each macro scenario and for each investor Style, some fraction of individuals accumulate no DC pension wealth because their employers do not offer such plans, or investors switch employers and cash out their rollover balance, or, in a very small number of cases, the investor's contributions are small and the returns are poor enough to zero out her balance by age 65. In what follows, we account only for workers with positive DC pension benefits.

Our primary interest is in DC pension benefit differences due to investor styles. We therefore suppress differences across individuals of a cohort by computing a summary statistic (mean, median, 10<sup>th</sup> percentile, 25<sup>th</sup> percentile) across individuals and comparing

<sup>10</sup> In PENSIM, investors are assumed to convert their accumulated DC pension benefit into an annuity. This insulates retirees from risk in the equity and bond markets in the years between retirement and death.

only those summary statistics across investor styles. Each summary statistic has a distribution because of variation in macrodemographic and macroeconomic conditions. We derived those distributions by simulating a large number (500) of macro environments for each investor style. Our objective is thus to compare the distributions of, say, median DC pension benefits across investor styles, the 10<sup>th</sup> percentile of pension benefits across investor styles, et cetera.

### Analysis

Table 3 presents summary statistics of the distribution of mean present values of DC pension benefits, for each of the seven investor Styles that we consider. For example, the average mean benefit under the GBF investor style was \$286,000. Under adverse macro conditions, the mean was lower; under favorable conditions, it would be higher. The 10<sup>th</sup> percentile of the distribution of means was \$211,000 and the interdecile range (difference between the 90<sup>th</sup> and the 10<sup>th</sup> percentiles) was \$153,000.

| Investment Style | Mean | P10 | P25 | Median | Inter Decile Range |
|------------------|------|-----|-----|--------|--------------------|
| GBF              | 286  | 211 | 244 | 282    | 153                |
| MMF+GBF          | 253  | 198 | 225 | 250    | 111                |
| DEF+GBF          | 358  | 228 | 267 | 340    | 285                |
| DEF              | 463  | 190 | 238 | 401    | 597                |
| EIF              | 511  | 204 | 256 | 440    | 673                |
| Conservative TDF | 328  | 221 | 260 | 315    | 232                |
| Aggressive TDF   | 390  | 222 | 263 | 363    | 371                |

Note: Each investor Style was simulated under 500 macro environments. For each of these macro scenarios, we calculated the mean present value of DC pension benefits. This table summarizes the distributions of mean benefits across macro scenarios. Also see Figure 3.

On average, mean benefits were lower for all-debt styles (GBF and MMF+GBF) than for all-equity styles (DEF and EIF). As expected, mixed debt and equity styles (DEF+GBF, conservative TDF, aggressive TDF) performed in between all-debt and all-equity styles.

While all-equity styles outperformed all-debt styles on average, their risk or volatility was greater, as demonstrated by their wider interdecile ranges. Indeed, all-equity styles do not stochastically dominate all-debt styles at the mean level of benefits. For example, at the 10<sup>th</sup> percentile, all-equity styles performed worse than the GBF style. The optimal investor style for the mean individual is therefore ambiguous; in most of the states of the world, an all-equity style such as EIF performed best, but individuals with a strong risk aversion may prefer an all-debt style such as GBF. “Heat map” tables below show how often the various investor styles outperform each other.

The appendix contains tables with summary statistics of the distributions of the 10<sup>th</sup> percentile, the 25<sup>th</sup> percentile, and the median of the present value of DC pension benefits, similar to Table 3 for the mean benefit.

*Cumulative Distributions:* The following figures show, for each investor Style, the cumulative distribution of the present value of DC pension benefits across macro scenarios. The first figure, Figure 3, shows the cumulative distribution of the mean benefit amount. For any investor Style the curve shows the fraction of the macro scenarios where the accumulated pension benefit was less than or equal to the value on the horizontal axis. For example, Equity Index Fund (the right-most or purple curve) investors earned mean benefits of around \$440,000 or less in 50% of the macro scenarios. Investors in the Conservative TDF (the red curve) earned mean benefits of around \$315,000 or less in 50% of the macro scenarios and investors in the MMF+GBF (the orange or left-most curve) earned mean benefits of around \$250,000 or less in 50% of the macro scenarios.

The distributions of the mean benefit for TDFs are sandwiched between the all-equity funds and the all-debt funds. The constant-weighted debt and equity portfolio (DEF+GBF) falls between the two TDFs, representing an equity weighting that over the individuals’ investing lifetime is less aggressive than the aggressive TDF and more aggressive than the conservative TDF.

Figures 4 to 6 below show the distributions of the 10<sup>th</sup> percentile, the 25<sup>th</sup> percentile, and the median of accumulated benefits. (Figure 3 corresponds to Table 3; Figures 4 to 6 correspond to the Appendix tables.) The same general patterns as for the means hold at these points in the distributions. For most macro scenarios, the ordering of the Styles is the same as for the means, with the equity Styles outperforming other asset allocations most of the time. Presumably because of its higher asset management fees (see Table 1), the DEF Style performed worse than the EIF Style. Also see Table 8 below.

*Dominating Styles:* The final analysis compares pension benefits to determine which styles tended to outperform the others in a pair-wise “horse race.” Each row of the “heat map” tables below represent the fraction of macro scenarios where the benefit to the investor Style in the left hand column (Investor Style A) exceeded the benefit to the investor Style in the columns to the right (Investor Style B). The data underlying Tables 4 to 7 are the same as those depicted in Figures 3 to 6; the “heat map” tables summarize how often the various Styles outperform one another, i.e., how often one curve lies to the right of another curve.

Consider Table 4 with a comparison of mean benefits across investment Styles. It reflects the same data as Figure 3 and Table 3. The color coding is such that green cells represent cases where Investor Style A had higher pension benefits in a large share of the macro scenarios compared to Investor Style B. Red cells represent comparisons in which Style A performed poorly relative to Style B, whereas no clear winner emerged in yellow cells. Rows with a predominance of green cells denote relatively high-performing investment styles. The mean GBF investor enjoyed higher benefits than the mean MMF+GBF investor in 97% of the macro scenarios and outperformed the mean DEF+GBF investor in 26% of scenarios. Notably, the TDFs frequently outperformed the debt-only funds, while equity Styles win large fractions across the board.

The next column in Table 4 shows the fraction of the macro scenarios where the mean Style A investor earned pension benefits greater than the mean of all other investors. The mean GBF investor beat all other mean investors in 24% of the macro scenarios, while the mean EIF investor beat all other mean investors in 73% of scenarios. The mean conservative TDF investor beat other mean investors in only 3% of macro scenarios.

The final set of columns in the table compares the benefits earned by the investor Style to an absolute threshold. All Styles earned a mean benefit of at least \$100,000 in all macro scenarios and all Styles earned at least \$200,000 in around 90% or more of macro scenarios.

**Table 4: Comparison of Mean Pension Benefits across Investor Styles**

| Investor Style A | Percent of Scenarios Where Investor Style A Has a Larger Mean Pension Benefit than Investor Style B |          |          |      |     |          |          | Percent of Scenarios Where Investor Style A Has the Largest Mean Pension Benefit | Percent of Scenarios for Which Mean Pension Benefit is at least |          |          |           |           |
|------------------|-----------------------------------------------------------------------------------------------------|----------|----------|------|-----|----------|----------|----------------------------------------------------------------------------------|-----------------------------------------------------------------|----------|----------|-----------|-----------|
|                  | Investor Style B                                                                                    |          |          |      |     |          |          |                                                                                  | \$25,000                                                        | \$50,000 | \$75,000 | \$100,000 | \$200,000 |
|                  | GBF                                                                                                 | MMF+ GBF | DEF+ GBF | DEF  | EIF | TDF Cons | TDF Aggr |                                                                                  |                                                                 |          |          |           |           |

| TDF Cons         | 72%                                                                                                 | 96%      | 23%      | 32%  | 25% |          | 26%      | 3%                                                                               | 100%                                                            | 100%     | 100%     | 100%      | 97%       |
| TDF Aggr         | 73%                                                                                                 | 84%      | 70%      | 37%  | 24% | 74%      |          | 0%                                                                               | 100%                                                            | 100%     | 100%     | 100%      | 95%       |

Tables 5, 6, and 7 below present “heat maps” for the 10<sup>th</sup> percentile, 25<sup>th</sup> percentile, and median investors. They reflect the same underlying data as Figures 4 to 6, respectively. The patterns are largely similar to the mean investor results. Even at the lower end of the distribution, the bond-only funds earned much less than the funds with equities. See Table 6 for the 25<sup>th</sup> percentile investor: in only 8% of macro scenarios did the 25<sup>th</sup> percentile of GBF investors’ benefit exceed \$50,000. Similarly, in only 1% of macro scenarios did the 25<sup>th</sup> percentile of MMF+GBF investors’ benefit exceed \$50,000, while between 29% and 54% of the time, other investors earned at least \$50,000 at the 25<sup>th</sup> percentile.

**Table 5: Comparison of 10th Percentile of Pension Benefits across Investor Styles**

| Investor Style A | Percent of Scenarios Where Investor Style A Has a Larger Pension Benefit than Investor Style B at the 10th Percentile |          |          |      |     |          |          | Scenarios Where Investor Style A Has the Largest Pension Benefit at the 10th Percentile | Percent of Scenarios for Which Pension Benefit at the 10th Percentile is at least |          |          |          |           |
|------------------|-----------------------------------------------------------------------------------------------------------------------|----------|----------|------|-----|----------|----------|-----------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------|----------|----------|----------|-----------|
|                  | Investor Style B                                                                                                      |          |          |      |     |          |          |                                                                                         | \$10,000                                                                          | \$25,000 | \$50,000 | \$75,000 | \$100,000 |
|                  | GBF                                                                                                                   | MMF+ GBF | DEF+ GBF | DEF  | EIF | TDF Cons | TDF Aggr |                                                                                         |                                                                                   |          |          |          |           |

| TDF Aggr         | 73%                                                                                                                   | 82%      | 67%      | 41%  | 27% | 73%      |          | 0%                                                                                                 | 100%                                                                              | 100%     | 100%     | 93%       | 33%       |

The final “heat map” table, Table 8 shows the fraction of macro scenarios where one investor Style dominated another Style on all four statistics: the mean, the 10<sup>th</sup> percentile, the 25<sup>th</sup> percentile and the median. This is suggestive of “stochastic dominance” and indicates the dominant Style generated larger benefits for investors located at many points along the (lower half of the) distribution of outcomes. The pair-wise comparison of Styles in Table 8 is similar to that for the median in Table 7, except that the winning fraction for dominant Styles was generally lower in Table 8 where Style A must beat the competing Style on all four measures. As before, equity styles dominated non-equity styles most of the time. Among the equity styles, EIF dominated DEF because of DEF’s higher asset management fees.

**Table 8: "Stochastic Dominance" of Investor Styles**

| Investor Style A | Percent of Scenarios Where Investor Style A Has a Larger Pension Benefit than Investor Style B at the Mean and at the 10th, 25th and 50th Percentiles |          |          |      |     |          |          | Percent of Scenarios Where Investor Style A Has the Largest Pension Benefit at the Mean, 10 h, 25 h and 50th Percentiles |

**5. Conclusions**

This research, like others in this area, has potential implications for public policy and optimal retirement saving behavior. Through the scenario analysis, we examined the impact of various asset allocations on the retirement wealth of individuals, paying particular attention to the role of TDFs. Gaining a better understanding of these issues has important implications for the well-being of retired workers. Our analyses are based on complex simulations of the lifecycle, employment, and financial outcomes for US workers and require many assumptions about decision-making and specification of parameter values. Furthermore, there is no one simple way to summarize the performance of an investment strategy when the outcome of that strategy depends on

individuals' circumstances and choices and the forces exerted on them and their portfolios by the macro economy.

Subject to the caveats below, our analyses show the following results.

- The TDFs that we specified generally outperformed the specified debt-only investment Styles. In around 70% of the macro scenarios, the TDFs generated larger pension wealth for investors in the bottom half of the benefit distribution and for the mean investor. Conversely, in about 30% of future states of the world the long-term government bond fund outperformed the TDFs.
- The all-equity investment Styles that we specified outperformed TDFs, usually on the order of 60% to 80% of the macro scenarios, depending on the funds and percentiles examined. The finding that all-equity funds outperform TDFs is consistent with Poterba et al. (2005).<sup>11</sup>

These conclusions are based on projected differences in DC pension benefit accumulations generated under 500 macro scenarios; a different set of macro scenarios could produce different results. Additionally, these results are sensitive to the premium on equity returns over debt built into the model, which is assumed to be 2.0%. Many factors affect scenario results. A different equity premium could imply significantly different results. A lower equity premium—perhaps reflecting recent trends—would narrow the range between outcomes of debt and equity styles. As a result, TDFs would outperform debt-only styles less often and equity-only styles more often. For example, the conservative TDF style based on an equity premium of 1.0 percent would dominate the lower half of the returns distribution of a debt-only (GBF) style in 53 percent of the macro environments, compared with 66 percent at a 2.0 percent equity premium. The analogous figures for the conservative TDF versus an equity-only (EIF) style are 33 percent (at a 1.0 percent equity premium) and 24 percent (at a 2.0 percent equity premium). Such equity premium effects are consistent with those found in other studies.

To further investigate the benefits of TDFs, we explored TDFs' ability to insure against poor market returns just prior to retirement. We calculated the compounded rates of return on T-Bonds and on equities in the five years prior to our cohort's 65<sup>th</sup> birthday. We then selected scenarios with particularly poor equity returns or particularly large negative differences between equity and T-Bond returns during this time window. For scenarios with very poor equity returns just prior to age 65, the mean benefit for the conservative TDF outperformed most equity investment styles. For scenarios with a few years in which T-Bonds far outperformed equities, the GBF Style outperformed even the conservative TDF, but the conservative TDF did much better than the aggressive one. This suggests that the appeal of TDFs is heightened when poor equity returns occur just prior to retirement. This phenomenon deserves further attention.

Potential extensions to our work include, among others, a closer examination of the insurance properties of TDFs, as sketched above; a more complete assessment of the role of equity premiums; an account for risk preferences similar to the approach used by

---

## APPENDIX

This appendix contains tables with summary statistics of the distributions of the 10<sup>th</sup> percentiles of the present values of DC pension benefits (Table A.1), their 25<sup>th</sup> percentiles (Table A.2), and their medians (Table A.3). The tables correspond to text Figures 4, 5, and 6, respectively.

**Table A.1: Summary Statistics over Macro Scenarios of the 10<sup>th</sup> Percentile of DC Pension Benefits (\$1,000s)**

| Investment Style | Mean | P10 | P25 | Median | Inter Decile Range |

| MMF+GBF          | 7    | 6   | 6   | 7      | 4                  |
| DEF+GBF          | 11   | 6   | 8   | 10     | 10                 |
| DEF              | 12   | 5   | 6   | 11     | 17                 |
| EIF              | 14   | 6   | 7   | 12     | 18                 |
| Conservative TDF | 10   | 6   | 8   | 10     | 9                  |
| Aggressive TDF   | 12   | 6   | 7   | 11     | 13                 |

Note: Each investor Style was simulated under 500 macro environments. For each of these macro scenarios, we calculated the 10<sup>th</sup> percentile of present values of DC pension benefits. This table summarizes the distributions of those 10<sup>th</sup> percentiles across macro scenarios. Also see text Figure 4.

**Table A.2: Summary Statistics over Macro Scenarios of the 25<sup>th</sup> Percentile of DC Pension Benefits (\$1,000s)**

| Investment Style | Mean | P10 | P25 | Median | Inter Decile Range |
|------------------|------|-----|-----|--------|--------------------|
| GBF              | 38   | 28  | 32  | 38     | 20                 |
| MMF+GBF          | 33   | 26  | 29  | 32     | 14                 |
| DEF+GBF          | 47   | 30  | 34  | 44     | 39                 |
| DEF              | 55   | 23  | 29  | 49     | 72                 |
| EIF              | 60   | 26  | 32  | 54     | 79                 |
| Conservative TDF | 44   | 29  | 34  | 42     | 34                 |
| Aggressive TDF   | 50   | 28  | 33  | 47     | 50                 |

Note: Each investor Style was simulated under 500 macro environments. For each of these macro scenarios, we calculated the 25<sup>th</sup> percentile of present values of DC pension benefits. This table summarizes the distributions of those 25<sup>th</sup> percentiles across macro scenarios. Also see text Figure 5.

**Table A3: Summary Statistics over Macro Scenarios of the Median DC Pension Benefit (\$1,000s)**

| Investment Style | Mean | P10 | P25 | Median | Inter-<br>Decile<br>Range |
|------------------|------|-----|-----|--------|---------------------------|
| GBF              | 136  | 102 | 115 | 133    | 70                        |
| MMF+GBF          | 119  | 94  | 105 | 118    | 52                        |
| DEF+GBF          | 168  | 108 | 124 | 160    | 132                       |
| DEF              | 205  | 89  | 110 | 181    | 257                       |
| EIF              | 225  | 96  | 119 | 197    | 285                       |
| Conservative TDF | 156  | 105 | 124 | 148    | 115                       |
| Aggressive TDF   | 181  | 104 | 123 | 168    | 173                       |

Note: Each investor Style was simulated under 500 macro environments. For each of these macro scenarios, we calculated the median present value of DC pension benefits. This table summarizes the distributions of median benefits across macro scenarios. Also see text Figure 6.

Ali,

We have one addition (sorry for any inconvenience). We'd like to add Mark Uyeda to the list.  
Thanks again.

1. Eileen Rominger, Director of Investment Management
2. Jennifer McHugh, Senior Advisor to the Chairman
3. Jamie Brigagliano, Deputy Director, Division of Trading and Markets
4. Lourdes Gonzalez, Acting Co-Chief Counsel, Division of Trading and Markets
5. Doug Scheidt, Associate Director and Chief Counsel, Division of Investment Management
6. Susan Nash, Associate Director, Division of Investment Management
7. Dave Grim, Assistant Chief Counsel, Division of Investment Management
8. Diane Blizzard, Special Assistant to the Director of the Division of Investment Management
9. Mark Uyeda, Assistant Director, Division of Investment Management
10. Sara Crovitz, Branch Chief, Division of Investment Management
11. Katy Courtney, Attorney-Adviser, Division of Investment Management

Hi Holly,

Here is our final list (one addition):

1. Phyllis Borzi, Assistant Secretary, Office of the Assistant Secretary, Employee Benefits Security Administration
  2. Michael Davis, Deputy Assistant Secretary, Office of the Assistant Secretary, Employee Benefits Security Administration
  3. Alan Lebowitz, Deputy Assistant Secretary for Operations, Office of the Assistant Secretary, Employee Benefits Security Administration
  4. Ali Khawar, Special Assistant, Office of the Assistant Secretary, Employee Benefits Security Administration
  5. Tim Hauser, Associate Solicitor, Plan Benefits Security Division, Office of the Solicitor
  6. Bill Taylor, Counsel for Regulations, Plan Benefits Security Division, Office of the Solicitor
  7. Joe Canary, Acting Director, Office of Regulations and Interpretations, Employee Benefits Security Administration
  8. Jeff Turner, Acting Deputy Director, Office of Regulations and Interpretations, Employee Benefits Security Administration
  9. Fred Wong, Senior Employee Benefits Law Specialist, Office of Regulations and Interpretations, Employee Benefits Security Administration
  10. Uchenna Evans, Attorney, Plan Benefits Security Division, Office of the Solicitor
- Thanks for your help in setting this up, and sorry we won't be able to meet tomorrow.

Ali

Good morning -

I think we can do Friday, 4/29 at 4 pm. I'm still confirming schedules, and will provide you with an updated attendee list when available. If you could please let me know who will be attending from the DOL, I would greatly appreciate it.

Thanks again for your assistance,  
Holly.

Holly,

My sincere apologies, but due to some scheduling changes on our end this time no longer works for us, as one of the key participants can no longer attend. I've included some alternates below - if none of them work, please give me a call and hopefully we can figure something out (I'm at 202.693.8301).

4/28: 2 pm  
4/29: 2:30 pm, 3 pm, or 4 pm

Thanks in advance and sorry once more for the change.

Ali

Ali,

March 26 at 4-5 pm will work for us. Thus far, the attendees will be:

Eileen Rominger, Director of Investment Management  
Lourdes Gonzalez, Acting Co-Chief Counsel, Division of Trading and Markets  
Doug Scheidt, Associate Director and Chief Counsel, Division of Investment Management  
Diane Blizzard, Senior Advisor to the Director of Investment Management  
Sara Crovitz, Branch Chief, Division of Investment Management

Catherine Courtney, Attorney-Adviser, Division of Investment Management

If you could please let me know who will be attending the meeting from the DOL, I would greatly appreciate it. I'll let you know if there are any changes to our attendee list.

Thanks so much,  
Holly.

**Sent:** Wednesday, April 13, 2011 12:20 PM  
**To:** Wong, Fred - EBSA  
**Subject:** Meeting request

Fred,

I work in the SEC's Division of Investment Management in the Office of Chief Counsel. I'm writing at the request of our Division director, Eileen Rominger, to see if a small group from IM (including Eileen), and from the Division of Trading and Markets, could meet to discuss the DOL's fiduciary proposal with Assistant Secretary Phyllis Borzi and other interested parties. Please let me know if you are not the correct person to contact; I thought of you because you were listed on the release and because we participated in a brief conference call many, many months ago.

My contact info is below if you (or someone else) would like to discuss. As far as timing, we would be most interested in a meeting after EBSA has had a chance to go through the recent comments submitted after the hearing. We would be happy to meet at the DOL or at the SEC, whichever you prefer.

I greatly appreciate any assistance. Many thanks,

Holly.

Holly Hunter-Ceci

Hi Holly,

Just to follow up on my voice mail from this morning, I wanted to check in and see if either April 26 from 4-5 pm or April 29 from 4-5 pm work for you all to come over to DOL.

Thanks  
Ali

**Subject:** Meeting request

Fred,

I work in the SEC's Division of Investment Management in the Office of Chief Counsel. I'm writing at the request of our Division director, Eileen Rominger, to see if a small group from IM (including Eileen), and from the Division of Trading and Markets, could meet to discuss the DOL's fiduciary proposal with Assistant Secretary Phyllis Borzi and other interested parties. Please let me know if you are not the correct person to contact; I thought of you because you were listed on the release

and because we participated in a brief conference call many, many months ago.

My contact info is below if you (or someone else) would like to discuss. As far as timing, we would be most interested in a meeting after EBSA has had a chance to go through the recent comments submitted after the hearing. We would be happy to meet at the DOL or at the SEC, whichever you prefer.

I greatly appreciate any assistance. Many thanks,

Holly.

Holly Hunter-Ceci  
Senior Counsel  
Office of Chief Counsel, Division of Investment Management  
Securities and Exchange Commission

Hi Ali – sorry for the delay. We can meet 4/29 at 4. I believe that we will have some updates to the attendee list, and I'll circulate these as soon as possible.

Thanks,  
Holly.

Holly,

My sincere apologies, but due to some scheduling changes on our end this time no longer works for us, as one of the key participants can no longer attend. I've included some alternates below - if none of them work, please give me a call and hopefully we can figure something out (I'm at 202.693.8301).

4/28: 2 pm  
4/29: 2:30 pm, 3 pm, or 4 pm

Thanks in advance and sorry once more for the change.

Ali

Ali,

March 26 at 4-5 pm will work for us. Thus far, the attendees will be:

Eileen Rominger, Director of Investment Management  
Lourdes Gonzalez, Acting Co-Chief Counsel, Division of Trading and Markets  
Doug Scheidt, Associate Director and Chief Counsel, Division of Investment Management  
Diane Blizzard, Senior Advisor to the Director of Investment Management  
Sara Crovitz, Branch Chief, Division of Investment Management  
Catherine Courtney, Attorney-Adviser, Division of Investment Management

If you could please let me know who will be attending the meeting from the DOL, I would greatly appreciate it. I'll let you know if there are any changes to our attendee list.

Thanks so much,  
Holly.

Hi Holly,

Assuming that 4/29 at 4 works, this is our list of attendees. Thanks for your help on this, and I'll be sure to let you know if there are any changes to our list.

1. Phyllis Borzi, Assistant Secretary, Office of the Assistant Secretary, Employee Benefits Security Administration
2. Michael Davis, Deputy Assistant Secretary, Office of the Assistant Secretary, Employee Benefits Security Administration
3. Alan Lebowitz, Deputy Assistant Secretary for Operations, Office of the Assistant Secretary, Employee Benefits Security Administration
4. Ali Khawar, Special Assistant, Office of the Assistant Secretary, Employee Benefits Security Administration
5. Tim Hauser, Associate Solicitor, Plan Benefits Security Division, Office of the Solicitor
6. Bill Taylor, Counsel for Regulations, Plan Benefits Security Division, Office of the Solicitor
7. Joe Canary, Acting Director, Office of Regulations and Interpretations, Employee Benefits Security Administration
8. Jeff Turner, Acting Deputy Director, Office of Regulations and Interpretations, Employee Benefits Security Administration
9. Fred Wong, Senior Employee Benefits Law Specialist, Office of Regulations and Interpretations, Employee Benefits Security Administration

Fred,

I work in the SEC's Division of Investment Management in the Office of Chief Counsel. I'm writing at the request of our Division director, Eileen Rominger, to see if a small group from IM (including Eileen), and from the Division of Trading and Markets, could meet to discuss the DOL's fiduciary proposal with Assistant Secretary Phyllis Borzi and other interested parties. Please let me know if you are not the correct person to contact; I thought of you because you were listed on the release and because we participated in a brief conference call many, many months ago.

My contact info is below if you (or someone else) would like to discuss. As far as timing, we would be most interested in a meeting after EBSA has had a chance to go through the recent comments submitted after the hearing. We would be happy to meet at the DOL or at the SEC, whichever you prefer.

I greatly appreciate any assistance. Many thanks,

Holly.

Holly Hunter-Ceci  
Senior Counsel  
Office of Chief Counsel, Division of Investment Management  
Securities and Exchange Commission

Ali,

We have one addition (sorry for any inconvenience). We'd like to add Mark Uyeda to the list.  
Thanks again.

1. Eileen Rominger, Director of Investment Management
2. Jennifer McHugh, Senior Advisor to the Chairman
3. Jamie Brigagliano, Deputy Director, Division of Trading and Markets
4. Lourdes Gonzalez, Acting Co-Chief Counsel, Division of Trading and Markets
5. Doug Scheidt, Associate Director and Chief Counsel, Division of Investment Management
6. Susan Nash, Associate Director, Division of Investment Management
7. Dave Grim, Assistant Chief Counsel, Division of Investment Management
8. Diane Blizzard, Special Assistant to the Director of the Division of Investment Management
9. Mark Uyeda, Assistant Director, Division of Investment Management
10. Sara Crovitz, Branch Chief, Division of Investment Management
11. Katy Courtney, Attorney-Adviser, Division of Investment Management

Hi Holly,

Here is our final list (one addition):

1. Phyllis Borzi, Assistant Secretary, Office of the Assistant Secretary, Employee Benefits Security Administration
2. Michael Davis, Deputy Assistant Secretary, Office of the Assistant Secretary, Employee Benefits Security Administration
3. Alan Lebowitz, Deputy Assistant Secretary for Operations, Office of the Assistant Secretary, Employee Benefits Security Administration
4. Ali Khawar, Special Assistant, Office of the Assistant Secretary, Employee Benefits Security Administration
5. Tim Hauser, Associate Solicitor, Plan Benefits Security Division, Office of the Solicitor

6. Bill Taylor, Counsel for Regulations, Plan Benefits Security Division, Office of the Solicitor
  7. Joe Canary, Acting Director, Office of Regulations and Interpretations, Employee Benefits Security Administration
  8. Jeff Turner, Acting Deputy Director, Office of Regulations and Interpretations, Employee Benefits Security Administration
  9. Fred Wong, Senior Employee Benefits Law Specialist, Office of Regulations and Interpretations, Employee Benefits Security Administration
  10. Uchenna Evans, Attorney, Plan Benefits Security Division, Office of the Solicitor
- Thanks for your help in setting this up, and sorry we won't be able to meet tomorrow.

Ali

Ali, here is our updated list.

Eileen Rominger, Director of Investment Management  
Jennifer McHugh, Senior Advisor to the Chairman  
Jamie Brigagliano, Deputy Director, Division of Trading and Markets  
Lourdes Gonzalez, Acting Co-Chief Counsel, Division of Trading and Markets  
Doug Scheidt, Associate Director and Chief Counsel, Division of Investment Management  
Susan Nash, Associate Director, Division of Investment Management  
Dave Grim, Assistant Chief Counsel, Division of Investment Management  
Diane Blizzard, Special Assistant to the Director of the Division of Investment Management  
Sara Crovitz, Branch Chief, Division of Investment Management  
Katy Courtney, Attorney-Adviser, Division of Investment Management

I'll be out of the office tomorrow, so unfortunately I will miss the meeting. If anything comes up tomorrow, please contact Katy Courtney at [REDACTED]@sec.gov, [REDACTED]. Katy will also be at the meeting. Thanks again for making time in your busy schedule to meet with us.

Thanks,  
Holly.

Good morning -

I think we can do Friday, 4/29 at 4 pm. I'm still confirming schedules, and will provide you with an updated attendee list when available. If you could please let me know who will be attending from the DOL, I would greatly appreciate it.

Thanks again for your assistance,  
Holly.

Holly,

My sincere apologies, but due to some scheduling changes on our end this time no longer works for us, as one of the key participants can no longer attend. I've included some alternates below - if none of them work, please give me a call and hopefully we can figure something out (I'm at 202.693.8301).

4/28: 2 pm  
4/29: 2:30 pm, 3 pm, or 4 pm

Thanks in advance and sorry once more for the change.

Ali

Ali,

March 26 at 4-5 pm will work for us. Thus far, the attendees will be:

Eileen Rominger, Director of Investment Management  
Lourdes Gonzalez, Acting Co-Chief Counsel, Division of Trading and Markets  
Doug Scheidt, Associate Director and Chief Counsel, Division of Investment Management  
Diane Blizzard, Senior Advisor to the Director of Investment Management  
Sara Crovitz, Branch Chief, Division of Investment Management  
Catherine Courtney, Attorney-Adviser, Division of Investment Management

If you could please let me know who will be attending the meeting from the DOL, I would greatly appreciate it. I'll let you know if there are any changes to our attendee list.

Thanks so much,  
Holly.

**Subject:** RE: Mtg w/Chairman Walter, SEC

Hi,

Great. The meeting is about coordination between DOL and SEC of our respective fiduciary regulations.

Thanks

Ali

Hi,

Yes, that works. Specifically, do you know the subject matter of the meeting?

Regards,

Kate

Hi Kate,

Thanks for your quick response. Can we do 3-4 on April 8?

Thanks again

Ali

Hello Ali,

Chairman Walter would be available to meet with Ms. Borzi on some of the possible date(s)/time(s) listed below:

Mon., April 8 3:00pm – 5pm

Fri., April 12 4pm

Regards,

Kate

Hi Jennifer,

I work for Phyllis at EBSA. I just wanted to follow up on this to see if you'd heard anything. If you'd

prefer for us to get in touch with Chairman Walter's office directly, please let me know. She and Phyllis actually ran into each other last weekend and talked about how they should meet, so we're eager to get this set up.

Thanks  
Ali

Thanks for the voice mail. I'm glad to hear that you already have the background document.

Phyllis would like to meet with Chairman Walter if that's possible. If you could let me know the contact information for the SEC folks we should contact, I'll pass the information on to my EBSA colleagues so they can set something up.

If you would like to pass the information on to the person responsible for Ch. Walter's schedule, it looks like Phyllis has the following times and dates available in the next few weeks if any of these slots work on your end.

3/25: 10 am-noon, 3-5 pm  
3/27: 10am-noon  
3/28: 9:30-11:30 am, 2:30-5pm

Thanks again for all your help!

Tim

Hi Tom,

Thanks so much for the phone call. I have to finish something up this afternoon and wondered if I could take you up on your offer to talk tomorrow? I will not be in first thing but can talk any time after 11. It would be great to set up a time.

Thanks again.

# United States Senate

WASHINGTON, DC 20510

April 11, 2014

President Barack Obama  
The White House  
1600 Pennsylvania Avenue, NW  
Washington, DC 20500

Dear Mr. President:

We write to reiterate our concerns about the potential conflict between the efforts of the Securities and Exchange Commission (SEC) to harmonize the standards of care for investment advisors and broker-dealers pursuant to Section 913 of the Dodd-Frank Act and the Department of Labor's efforts to redefine the term "fiduciary" under the Employee Retirement Income Security Act of 1974 (ERISA). We are deeply concerned that these efforts, despite the Agencies' coordination, may fundamentally work at cross purposes in a manner that would limit Main Street investors' access to retirement advice and products, increasing costs and limiting choice.

We believe that Congress provided clear direction to the SEC through Section 913 of Dodd-Frank to provide for the establishment of a uniform fiduciary standard that applies equally to broker-dealers and registered investment advisors for the benefit of investors when personalized investment advice is provided. In Section 913, Congress intended for a single best interest standard to apply to all retail accounts, including retirement accounts, based on specifically enumerated guidelines. These guidelines include the requirement that the standard be "no less stringent" than the fiduciary duty that currently applies to investment advisors and that it preserves the business models currently utilized by both investment advisors and broker-dealers.

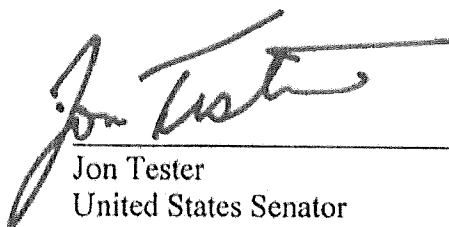

We appreciate that the Department of Labor withdrew its 2010 proposal and is pursuing a re-proposal of the redefinition of "fiduciary" under ERISA. However, we caution that proposals which seek to eliminate commission-based advice and revenue sharing like the Department's 2010 proposed rule will likely limit access to meaningful investment advice and products available to millions of IRA investors while increasing costs. Further, such limitations could also lead to the leakage of limited retirement savings out of accounts and limit the ability to small businesses to seek advice on retirement plan formation and maintenance, deterring small business owners from offering such savings vehicles.

The gap between what Americans are saving for retirement and what they will need for a comfortable retirement is in the *trillions* of dollars. Now is not the time to be limiting the ability of Main Street investors to access investment advice. This challenge is even more acute in states like ours where a significant percentage of the workforce is employed by small businesses with limited opportunities to access workplace retirement plans.

We are heartened by recent steps taken by the SEC to prioritize this issue, and by Chair White's direction to staff to evaluate all options available to implement Section 913. We strongly believe that the development of a single best-interest standard is not only in the interest of investor protection but will also best facilitate access to meaningful investment advice and products. But in doing so, we cannot create conflicting standards or arbitrarily limit needed access to retirement advice and products inconsistent with Congressional direction in this matter.

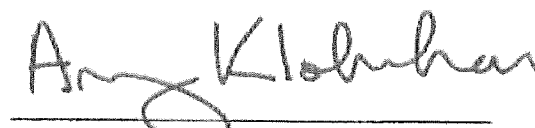

We urge you to closely monitor the progress of these Agencies in this matter to ensure that conflicting regulations are not established and that at a minimum, the Department of Labor does not issue final regulations before the SEC has completed its work in this area so as to not disrupt the SEC's fulfillment of a Congressional directive. We know that you share our goal of improving retirement security for millions of American by ensuring access to investment advice and products and we look forward to working with you in furtherance of this goal.

Sincerely,

---

Sharon,

I hope that you are well.

The Secretary is scheduled to tentatively speak with Mary Jo on Tuesday. Mary Jo is happy to chat, but I was wondering if it made more sense for the two to speak a little later,

Please let me know what you think.

---

Tim, my apologies for the delay getting back to you. Do you have time tomorrow afternoon to speak with me about this project? I am free at any time after 2:30.

Many thanks,

Jen

JENNIFER R. PORTER

Thank you very much. I'm looking forward to continuing our conversations. In the next day or two, I'll reach out to Ms. Porter in the hope of providing a bit of a status report on our work since we last met on this project.

Tim

**Date:** Thursday, August 21, 2014 6:21:00 PM

---

The Secretary was not intending that he speak with Mary Jo alone, unless that was what she wanted. I agree – I think it would be good to have a few staff in the meeting so they can discuss more of the substance. I think he will likely bring Phyllis Borzi, Assistant Secretary for EBSA and Tim Hauser, Phyllis' deputy who has led the team working with your team. Thanks, Sharon

Thanks for the note, Sharon. I was thinking about the same thing.

Do you know if the Secretary wants to speak with Mary Jo alone? If so, that would be fine. Alternatively, if he wanted to focus more on details of your work (and our comments), it may be better to have a few of the staff at the meeting too. I am thinking the latter, but we are flexible.

Good. We are on the same page.

I think we will have Jennifer Porter from Mary Jo's office at the meeting and some folks from the staff. Let me work on who -- part of it depends on who is here next week.

Sharon,

I hope that you are well.

The Secretary is scheduled to tentatively speak with Mary Jo on Tuesday. Mary Jo is happy to chat, but I was wondering if it made more sense for the two to speak a little later,

Please let me know what you think.

**Importance:** High

Thanks, Jen. I think it would be terrific if we could get another discussion of point of sale disclosures done this week and include the Treasury folks. Then, we could move on to the other topics next week when I’m back.

I’ve asked the head of our Office of Regulations and Interpretations, Joe Canary, to work with you on getting this set up. More generally, he’s always a good person to talk to on this project! Joe’s number is 202-693-8351.

**Subject:** Calls to discuss fiduciary duty exemption

Tim,

My apologies for the delay getting back to you with proposed times to discuss point of sale disclosures, the low-fee safe harbor, and the general exemption outline. Since you are out of the office for the next several days, maybe we should try to schedule the point of sale disclosure

discussion with DOL/Treasury staff first. I list below the days and times this week when our staff is available. Please let me know if there is someone else I should contact about scheduling this call while you are gone.

Thurs. (9/18) 11:30-12:30; 2-3:30

Fri. (9/19) 12-3

For the other two topics, the team is available the following days and times next week. Please let me know what works for all of you.

Tues. (9/23) 9-10

Wed. (9/24) 9-12:30; 4-5

Thurs. (9/25) 9-10; 11-5

Fri. (9/26) 10-1; 3:30-5

Thanks,

**Jen Porter**

## Proposed Agenda

- Definition of the term “fiduciary” under the DOL’s proposed rule (e.g., application to IRAs)
- The SEC staff’s report on the standards of care with respect to investment advisers and broker-dealers, as required by section 913 of Dodd-Frank
- Costs
- Prohibited transactions under ERISA / principal transactions under Investment Advisers Act
- Other items of interest, time permitting:
  - DOL’s initiatives with respect to electronic delivery
  - 12b-1 fees and retirement plans

**From:** [Hunter-Ceci, Holly L.](#)  
**To:** [Wong, Fred - EBSA](#)  
**Subject:** Meeting request  
**Date:** Wednesday, April 13, 2011 12:20:54 PM

---

Fred,

I work in the SEC's Division of Investment Management in the Office of Chief Counsel. I'm writing at the request of our Division director, Eileen Rominger, to see if a small group from IM (including Eileen), and from the Division of Trading and Markets, could meet to discuss the DOL's fiduciary proposal with Assistant Secretary Phyllis Borzi and other interested parties. Please let me know if you are not the correct person to contact; I thought of you because you were listed on the release and because we participated in a brief conference call many, many months ago.

My contact info is below if you (or someone else) would like to discuss. As far as timing, we would be most interested in a meeting after EBSA has had a chance to go through the recent comments submitted after the hearing. We would be happy to meet at the DOL or at the SEC, whichever you prefer.

I greatly appreciate any assistance. Many thanks,

Holly.

Lou,

SEC staff will be happy to speak with you. I will identify the appropriate individuals and find a time that works for everyone. What does your schedule look like tomorrow?

Regards,  
Jen

Fred,

We very much look forward to meeting with you and your colleagues tomorrow at 4:00. As you requested, and to help make the meeting more useful for you, I've attached suggested topics that we thought might be of mutual interest. If there are other topics that you would like to discuss, please let us know.

Thanks,  
Holly

Thanks, that works for us.

I've attached a revised agenda (kept in draft in case anything else comes up). Unfortunately, I'll miss the meeting tomorrow as I'll be out of the office, but please contact Katy Courtney if you need anything tomorrow. Katy will be attending the meeting tomorrow. Her contact info is [\[REDACTED\]@sec.gov](#), [\[REDACTED\]](#).

Thanks again for making time to meet, and I'm sorry to miss it.

Holly.

## Proposed Agenda

- Definition of the term “fiduciary” under the DOL’s proposed rule (e.g., application to IRAs)
- The SEC staff’s report on the standards of care with respect to investment advisers and broker-dealers, as required by section 913 of Dodd-Frank
- Costs
- Prohibited transactions under ERISA / principal transactions under Investment Advisers Act
- Other items of interest, time permitting:
  - DOL’s initiatives with respect to electronic delivery
  - 12b-1 fees and retirement plans
  - Target date funds

**Sent:** Wednesday, April 13, 2011 12:20 PM  
**To:** Wong, Fred - EBSA  
**Subject:** Meeting request

Fred,

I work in the SEC's Division of Investment Management in the Office of Chief Counsel. I'm writing at the request of our Division director, Eileen Rominger, to see if a small group from IM (including Eileen), and from the Division of Trading and Markets, could meet to discuss the DOL's fiduciary proposal with Assistant Secretary Phyllis Borzi and other interested parties. Please let me know if you are not the correct person to contact; I thought of you because you were listed on the release and because we participated in a brief conference call many, many months ago.

My contact info is below if you (or someone else) would like to discuss. As far as timing, we would be most interested in a meeting after EBSA has had a chance to go through the recent comments submitted after the hearing. We would be happy to meet at the DOL or at the SEC, whichever you prefer.

I greatly appreciate any assistance. Many thanks,

Holly.

Holly Hunter-Ceci

**Subject:** Proposed rule

Mark -

Attached is the document I mentioned in my voicemail. It is a proposed amendment to a current DOL regulation that defines the circumstances under which a person will be considered a "fiduciary" under ERISA by reason of rendering investment advice to a plan. This draft has not yet completed clearance within the DOL, but it should provide a good idea of our general direction. We expect to brief senior management on this proposal within the next few weeks, so any thoughts that SEC staff might have would be greatly appreciated. Please feel free to call me if you have any questions [REDACTED]. Thanks.

**To:** 'Uyeda, Mark T'  
**Cc:** Wong, Fred - EBSA  
**Subject:** Proposed rule

Mark -

Attached is the document I mentioned in my voicemail. It is a proposed amendment to a current DOL regulation that defines the circumstances under which a person will be considered a "fiduciary" under ERISA by reason of rendering investment advice to a plan. This draft has not yet completed clearance within the DOL, but it should provide a good idea of our general direction. We expect to brief senior management on this proposal within the next few weeks, so any thoughts that SEC staff might have would be greatly appreciated. Please feel free to call me if you have any questions ([REDACTED]). Thanks.

Fred: Thanks again for offering the advance draft of the fiduciary-definition regulation. I have checked with the other SEC staff members who looked at the release earlier and they indicated that they did not need to see an advance copy or schedule a call to discuss. We look forward to reading the release when it is published.

Best regards,

Mark

Tim,

Attached is a sample list of SEC enforcement cases per your request. Please let me know if we can be of further help.

Best regards,

Lourdes

Lourdes Gonzalez  
Assistant Chief Counsel Sales Practices  
Division of Trading and Markets  
US Securities and Exchange Commission

## List of cases

### Sample cases involving recommendations/sales driven by compensation, not in best interest of customer:

Wells Fargo Securities LLC (f/k/a Wachovia Capital Markets LLC), Securities Act Release No. 9200, Exchange Act Release No. 64182 (April 5, 2011) (The Commission alleged that Wachovia charged undisclosed excessive markups in the sale of CDOs. More specifically, the Commission alleged that Wachovia marked down \$5.5 million of equity to 52.7 cents on the dollar after the deal closed and it was unable to find a buyer. Months later, the investors paid 90 and 95 cents on the dollar. Unbeknownst to them, these prices were over 70 percent higher than the price at which the equity had been marked for accounting purposes. The Commission further alleged that Wachovia Capital Markets misrepresented to investors in a CDO that it acquired assets from affiliates “on an arm’s-length basis” and “at fair market prices” when, in fact, 40 residential mortgage-backed securities were transferred from an affiliate at above-market prices.)

J.P. Morgan Securities Inc., Securities Act Release No. 9078, Exchange Act Release No. 60928 (Nov. 11, 2009) (The Commission alleged that J.P. Morgan Securities and two former managing directors made more than \$8 million in undisclosed payments to close friends of certain Jefferson County commissioners. The friends owned or worked at local broker-dealer firms that performed no known services on the transactions. In connection with the payments, the county commissioners voted to select J.P. Morgan as managing underwriter of the bond offerings and its affiliated bank as swap provider for the transactions. The Commission further alleged that J.P. Morgan did not disclose any of the payments or conflicts of interest in the swap confirmation agreements or bond offering documents, yet passed on the cost of the unlawful payments by charging the county higher interest rates on the swap transactions.)

Auction Rate Securities Global Settlement (<http://www.sec.gov/news/press/2009/2009-127.htm>). (The Commission alleged as part of a global settlement, that several broker-dealers misrepresented to certain customers that auction rate securities (“ARS”) were safe, highly liquid investments that were comparable to money markets. In late 2007 and early 2008, the firms knew that the ARS market was deteriorating, causing the firms to purchase additional inventory to prevent failed auctions. At the same time, however, the firms knew that their ability to support auctions by purchasing more ARS had been reduced, as the credit crisis stressed the firms' balance sheets. The Commission further alleged that the broker-dealers failed to make their customers aware of these risks and in mid-February 2008, these firms decided to stop supporting the ARS market, leaving their customers holding billions in illiquid ARS.)

### Sample cases involving churning:

Donald A. Roche, Exchange Act Release No. 38742 (June 17, 1997) (The Commission found that a registered representative of a broker-dealer (“RR”) churned the accounts of his customers. The frequent turnover in the accounts conflicted with the customers' expressed investment objectives, which was illustrated by the fact that the transaction costs associated with the level of trading in the accounts made it extremely unlikely that any of the customers would be able to break even, much less earn any profit. The Commission found that the RR had abused his

## List of cases

control over the trading in the accounts of his customers to make numerous trades that placed his compensation ahead of the customers' best interests.).

J.W. Barclay & Co., Inc. et. al., Initial Decision No 239, 2003 SEC LEXIS 2529 (Oct 23, 2003) (The Commission found that a BD, acting through RR, executed over thirty trades in the customer's account. These trades generated \$ 55,441 in commissions, half of which went to RR. The annualized portfolio turnover rate was 86 and the annualized break-even rate was 611%. Positions in the customer's account were typically closed out after only fifteen days. By each of these measures, trading in the customer's account was excessive in light of the customer's objective. The customer was sustaining large losses while the RR was generating substantial commission income for himself. Commissions also exceeded average monthly account equity by a significant amount.) *See also* In re Edgar B. Alacan, Exchange Act Rel. No. 49970 (July 6, 2004).

### Sample cases involving principal transactions that were driven by benefit to the broker-dealer and were not in best interest of customer:

Leslie Arouh, Exchange Act Release No 62898 (Dec. 20, 2004); In the Matter of Leslie A. Arouh, 34 Act Release Nos. 51254 (Feb. 25, 2005) (Order denying motion for Reconsideration) and 50889 (Dec. 20, 2004); In the Matter of Leslie Arouh, Initial Decision No. 238 (Oct. 21, 2003) and 34 Act Release No. 46450 (Sept. 3, 2002) (The Commission found that Arouh arranged for his employer, First Union, to enter into a series of pre-arranged transactions with his largest client, an investment adviser. These trades allowed the investment adviser to improve the performance of certain advised accounts at the expense of other accounts. As a result of these trades, Arouh's sales group was given a \$800,000 sales credit and Arouh was paid \$415,000 in commissions.)

### Sample cases involving excessive markups:

Andrew Gonchar et. al., Exchange Act Release No. 60506 (Aug. 14, 2009) (The Commission found that registered representatives of a broker-dealer interpositioned a 3<sup>rd</sup> party between CIBC and customers and charged customers undisclosed and fraudulently excessive markups).

SEC v. First Jersey Sec., Inc., 101 F.3d 1450, 1479 (2d Cir. 1996), *cert. denied*, 522 U.S. 812, 118 S. Ct. 57, 139 L. Ed. 2d 21 (1997) (The court found that the evidence overwhelmingly established that the defendants wilfully and deliberately violated established law forbidding excessive markups.)

### Sample cases involving revenue sharing

Edward D. Jones & Co., Securities Act Release No. 8520, Exchange Act Release No. 50910 (Dec. 22, 2004) (The Commission found that Edward Jones failed to disclose that it received tens of millions of dollars from certain Preferred Families of mutual funds each year, on top of commissions and other fees, for selling their mutual funds. Edward Jones also failed to disclose

## List of cases

that such payments were a material factor, among others, in becoming and remaining an Edward Jones Preferred Family. Edward Jones provided the Preferred Families with certain benefits not otherwise available to non-preferred families including, among other things, exclusive shelf space for the sale and marketing of their funds and exclusive access to Edward Jones' investment representatives and customer base.)

Morgan Stanley DW Inc., Securities Act Release No. 8339, Exchange Act Release No. 48789 (Nov. 17, 2003) (The Commission found that Morgan Stanley failed to disclose that it paid increased compensation to RRs who sold funds that substantial fees marketing to the firm. Further, the Commission found that Morgan Stanley also failed to adequately disclose at the point of sale the higher fees associated with large (\$100,000 or greater) purchases of Class B shares of certain of its proprietary mutual funds. The Commission also found that, in connection with its recommendation to customers to purchase certain Class B shares, Morgan Stanley did not adequately inform customers at the point of sale that large purchases of such shares were subject to higher fees.)

### Sample cases involving mutual fund share classes:

Raghavan Sathianathan, Exchange Act Release No. 54722 (Nov. 8, 2006) (The Commission found that RR recommended that customers purchase higher-priced class B shares when customers could have instead purchased class A shares with no front-end load).

In re IFG Network Securities, Inc., Exchange Act Release No. 54127 (July 11, 2006) and Initial Decisions Release No. 273, 2005 SEC LEXIS 335 (Feb. 10, 2005) (The Commission found that RR violated Exchange Act Section 10(b) and Rule 10b-5 thereunder and Securities Act Rule 17(a) by recommending that his customers invest in Class B, rather than Class A, shares of mutual funds while failing to disclose (a) the differences in expense structure of investments in these different share classes; (b) that Class A shares would outperform Class B shares for investments of at least \$ 250,000 (because of a breakpoint discount); and (c) that he received a larger commission from the investors' purchase of Class B shares than he would have received had the customers invested in Class A shares.)

### Sample cases involving mutual fund and variable annuity switching:

Scott Epstein, Exchange Act Release No. 59328 (Jan. 30, 2009) (The Commission found that recommendations by broker-dealer registered representative ("RR") that customers switch mutual funds generated substantial production credits for RR, but did not serve the interests of his customers).

Raymond A. Parkins, Jr., Securities Act Release No. 7896, Exchange Act Release No. 43336, Advisors Act Release No. 1898 (Sep. 25, 2000) (The Commission found that RR "induced his investment advisory clients to switch variable annuities by providing them with unfounded, false, and misleading justifications for the switches and by misrepresenting or omitting to inform them of the sales charges associated with the switches. As a result of [RR's] fraudulent conduct, his

## List of cases

clients incurred unnecessary sales charges [...] and, in some cases, lost a portion of their investment principal. [RR], on the other hand, received commissions”).

Charles E. Marland & Co., Inc., 45 S.E.C. 632 (1974) (The Commission upheld the NASD’s finding that RR violated Article III, Sections 1 and 2 of the NASD Rules of Fair Practice in that they improperly recommended to many customers the liquidation of various investment company shares and the reinvestment of the proceeds in other investment companies having similar investment objectives, thereby generating additional commissions for their own benefit.)

Russell L. Irish, 42 S.E.C. 735 (1965), *aff’d*, Irish v. SEC, 367 F.2d 637 (9th Cir. 1966), *cert. denied*, 386 U.S. 911 (1967) (The Commission found that, contrary to the customers' best interests and for his own gain, a RR induced purchases and redemptions of mutual fund shares in the accounts of customers which were excessive in size and frequency in the light of the character of such accounts. More specifically, registrant followed a policy of recommending to customers that they redeem the shares of one mutual fund and use the proceeds to buy those of another fund, or shift from one series to another series of the same mutual fund, which transactions required the payment of a new sales commission.)

Gregory P. Waldon, Exchange Act Release No. 48419 (Aug. 29, 2003) (The Commission found that RR “solicited customers to switch out of investments they already had in variable annuities and use the funds to purchase new variable annuities, incurring costs and expenses in the process,” and “profited from the sales while the customers incurred increased costs or risks from the transactions, without offsetting benefits”).

### Sample cases involving investment adviser dumping:

SEC v. ICP Asset Management, LLC, ICP Securities, LLC, Institutional Credit Partners, LLC, and Thomas C. Priore, Litigation Release Nos. 22024 (July 1, 2011) and 21563 (June 22, 2010) (The Commission's civil suit alleged that an investment adviser (ICP, which managed several investment vehicles, including four collateralized debt obligations whose assets primarily consisted of mortgage-backed bonds) and other Defendants repeatedly caused the CDOs to overpay for bonds — often in order to protect another ICP client from realizing losses or to make money for ICP. ICP also defrauded the CDOs by structuring trades in ways that disadvantaged the CDOs and allowed ICP and its affiliates to reap massive, risk-free, and undisclosed profits at the CDOs’ expense. The Defendants’ abuses of their fiduciary responsibilities to clients included numerous other improper practices, such as entering into prohibited investments, failing to obtain required approvals for trades, misrepresenting the value of holdings, and deceiving clients, investors, and other parties about the CDOs’ investments.)

SEC v. Nathan Chapman, Jr., Litigation Release No. 18203 (June 26, 2003) (The Commission's complaint alleges that, in an effort to rescue a failing IPO, Chapman, Bravo, Baldwin and Brown engaged in fraudulent conduct, including .... placing close to one-third of the IPO shares into the account of an advisory client).

## List of cases

### Sample cases involving investment adviser undisclosed principal transactions:

In the Matter of Legg Mason Wood Walker, Inc., Advisers Act Release No. 1781 (Jan. 11, 1999) (The Commission found that Legg Mason arranged to indirectly transact as a principal in transactions with its advisory clients, without the required disclosure and consent of the client. On such occasions, an order to buy stock for the account of an advisory client was entered with the Legg Mason trading desk. A Legg Mason trader transmitted the order to another market maker for execution, purportedly on an agency basis. Without disclosure to, and consent of, the client, however, Legg Mason simultaneously arranged to sell an identical amount of the stock to the second market maker. The second market maker in turn sold the same amount of stock to Legg Mason, in order to fill the order of the Legg Mason advisory client. This arrangement gave Legg Mason the potential to make a trading profit from the orders of advisory clients, or to dispose of an unwanted inventory position.)

SEC v. Rauscher Pierce Refsnes, Inc., and James R. Feltham, Litigation Release No. 15613 (Jan. 8, 1998); SEC v. Rauscher Pierce Refsnes, Inc. et al., 17 F. Supp. 2d 985 (D. Ariz. 1998); and In the Matter of Rauscher Pierce Refsnes, Inc., Dain Rauscher Inc., and James R. Feltham, Advisers Act Release No. 1863 (Apr. 6, 2000) (The Commission alleged that Rauscher and Feltham defrauded their financial advisory client, the State of Arizona Department of Administration ("DOA"), in connection with DOA's issuance of \$129,640,000 of Series 1992B Refunding Certificates of Participation (the "1992B COPs") by selling certain US Treasury securities (the "escrow securities") to the State at above-market prices. Inflating the escrow securities' prices reduced the yields on those securities and enabled Rauscher to make illegal profits at the expense of the federal government while purporting to comply with the federal tax laws governing the 1992B COPs offering, a practice commonly referred to as "yield burning." Rauscher allegedly took an undisclosed \$707,037 profit on its sales to DOA.)

**Date:** Wednesday, September 14, 2011 12:15:04 PM  
**Attachments:** [ttaa-cref comment letter.pdf](#)  
[sifma comment letter.pdf](#)

---

Hi Tim.

I hope you are doing well. I was hoping that you and your colleagues could help us with a new issue.

We wanted to flag for you a comment letter that we received from TIAA-CREF regarding a FINRA proposal concerning customer account statements. By way of background, in May 2009, we noticed FINRA's rule proposal governing customer account statements, under which statements would have been required to be delivered on a monthly basis, instead of the current quarterly requirement. In response to comments to that proposal, FINRA recently filed an amendment which carved out a number of specific circumstances from the monthly statement requirement.

The notice of the amendment is available at: <http://www.sec.gov/rules/sro/finra/2011/34-64969.pdf> <<http://www.sec.gov/rules/sro/finra/2011/34-64969.pdf>>

TIAA-CREF, in its comment letter, argues that transactions effected in employer-sponsored retirement plans should be generally excluded from the monthly requirement. It suggests that FINRA's attempt to exclude certain retirement plan transactions effectively provides no relief. SIFMA made similar arguments, and their letter is attached for reference.

We would be grateful for your thoughts on the concerns raised and potential implications. We believe FINRA would be more than happy to benefit from your expertise as well. We are obligated to act on the proposal by the end of October, and FINRA is anticipating providing a draft response to us in the next few weeks. If you are available, perhaps we could find a time to have a call with FINRA early next week?

Kind regards,

Lourdes

Elizabeth M. Murphy, Secretary  
U.S. Securities and Exchange Commission  
100 F Street, N.E.  
Washington, DC 20549-1090

Re: SR-FINRA-2009-028; Amendment No. 1 to Proposed Rule Change to Adopt  
FINRA Rule 2231 (Customer Account Statements) in the Consolidated  
FINRA Rulebook

Dear Ms. Murphy:

TIAA-CREF Individual & Institutional Services, LLC (“TC Services”)<sup>1</sup> writes in further support of its prior requests that FINRA wholly exclude all transactions within employer sponsored retirement plans (“retirement plans”) from the monthly customer account statement requirement within proposed FINRA Rule 2231 (“Proposed Rule”).<sup>2</sup> Our earlier comments<sup>3</sup> demonstrate how monthly statements are not necessary in this limited context to satisfy FINRA’s stated goals of providing retail investors with the opportunity to review their accounts in a timely manner for errors or possible identity theft.

There exist today other already required client statements and other access points that provide more timely notice to participants of account activity in both a more efficient and less expensive manner. Moreover, we have established that the incremental benefit, if indeed any, associated with monthly statements within retirement plans is far outweighed by the

---

<sup>1</sup> TC Services is registered with the Securities and Exchange Commission (“SEC”) as a broker-dealer and is a member of FINRA. TC Services is wholly owned by Teachers Insurance and Annuity Association of America (“TIAA”), and both TC Services and TIAA are members of the TIAA-CREF group of companies, which comprise one of the world’s largest private retirement plan systems. For over 90 years, TIAA-CREF has helped people in the academic, research, medical and cultural fields plan for and live through retirement.

<sup>2</sup> Notice of Filing of Proposed Rule Change and Amendment No. 1 to Adopt FINRA Rule 2231 (Customer Account Statements) in the Consolidated FINRA Rulebook, Exch. Act Rel. No. 34-64969 (July 26, 2011), 76 Fed. Reg. 46,340 (August 2., 2011) (the “Amended Proposed Rule Notice”).

<sup>3</sup> The Commission sought and received comments on a prior version of proposed FINRA Rule 2231 in May 2009 (See Exch. Act. Rel. No. 59,921 (May 14, 2009), 74 Fed. Reg. 23912 (May 21, 2009) (“Prior Proposed Rule Notice”). TC Services submitted comment letters on the Prior Proposed Rule Notice dated June 11, 2009 and July 13, 2009.

proposal's costs. Were FINRA to decline to further modify the proposal in a manner that wholly excludes transactions within retirement plans from the monthly statement requirement, the proposal will not meet the standards for rulemaking applicable to FINRA<sup>4</sup>, would not meet the type of fulsome cost and benefits analysis suggested by a recent judicial decision<sup>5</sup> and would run afoul of recent executive orders.<sup>6</sup>

In responding to our earlier comments, FINRA re-proposed the Rule to exclude certain retirement plan transactions—namely, recurring transactions consistent with the requirements of Rule 10b-10 or related no-action, interpretive or exemptive relief issued by the SEC. We are cognizant of the challenge FINRA faces in rulemaking—crafting meaningful exemptions from a proposal that are not so unnecessarily broad as to eviscerate the intent of the proposal. In this matter, we believe after reviewing FINRA's analysis in re-proposing the rule that FINRA did grasp the justification in exempting retirement plan transactions, tried to accommodate this stance in the re-proposal, but inadvertently did so in a manner that effectively provides no relief whatsoever for retirement plans.

The re-proposal would still require monthly statements within employer sponsored retirement plans for non-recurring transactions such as occasional participant re-allocations. This will result in retirement plan participants receiving more statements than they currently do. Under the proposal they will now receive three—an immediate confirmation statement and monthly statement for non recurring transactions, and the quarterly statement reflecting transactions made under a periodic or investment company plan. As TIAA set forth in an earlier comment letter, and independently supported by other peer firms<sup>7</sup>, requiring monthly statements within retirement plans is a fix costing in the millions of dollars for firms.

We are nonetheless hopeful we have found a mutually agreeable resolution. And after recapping why the monthly statement portion of the proposal is not justifiable for retirement plan transactions—recurring or not—we provide sample language FINRA can adopt to amend the proposal to exempt retirement plans.

#### **A. FINRA's Discussion of the Benefits and the Corresponding Burdens on Competition is Cursory and Does Not Meet its Regulatory Requirements.**

Exchange Act Rules 15A(b)(6) and (9) require FINRA rulemaking initiatives be designed to prevent fraudulent and manipulative acts and not impose any burden on competition not necessary or appropriate. Similarly, the instructions to Form 19b-4 require FINRA explain in detail why the proposed rule change does not unduly burden competition or efficiency. Form 19b-4 further cautions that “a mere assertion that the proposed rule change is consistent with those requirements is not sufficient.”

<sup>4</sup> As noted in TC Services' prior comment letter of July 13, 2009, we believe the Proposed Rule is inconsistent with the requirements of Section 15A of the Exchange Act and thus should not be approved by the Commission pursuant to Section 19 of the Exchange Act.

<sup>5</sup> See Business Roundtable v. S.E.C., 2011 WL 2936808 (C.A.D.C.,2011).

<sup>6</sup> See Executive Order 13563, Improving Regulation and Regulatory Review, 76 Fed. Reg. 3821 (Jan. 21, 2011) (“Order 13563”) and Executive Order 13579, Regulation and Independent Regulatory Agencies, 76 Fed. Reg. 41,587 (July 14, 2011) (“Order 13579”).

<sup>7</sup> See Amended Proposed Rule Notice at 46,342.

This required level of analysis and detail is noticeably absent from the proposal when viewed in the context of employer sponsored retirement plans. By way of example, and perhaps most glaringly, FINRA’s entire justification of the burden on competition consists of the following: “FINRA does not believe that the proposed rule change will result in any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.”<sup>8</sup>

As to providing detail as to the need for monthly statements within retirement plans, FINRA goes no further than to conclude, “[we] believe that the proposed rule change will provide customers with critical information regarding their accounts and will allow them to review their statements in a timely manner...”<sup>9</sup> FINRA cites no studies, empirical data, or specific instances of past harm in support thereof. Moreover, this allegation ignores that customer statements currently provided to customers already serve the same purpose of customer protection—specifically immediate confirmation statements and quarterly account statements. This allegation also ignores that were FINRA to find those two existing customer reports somehow insufficient—to which they have offered no evidence—less expensive and more timely alternatives exist. Customers can obtain account information almost immediately through web access or by phoning national call centers to speak with a financial associate or access automated self-help phone systems.

T-C Services estimates the costs of developing the capability to provide monthly statements for just non recurring transactions will exceed one million dollars. Given that many TIAA-CREF investment products are managed on an at cost basis, additional expense flows through to participants. Besides hard costs, the proposal’s toll on environmental resources is significant. We estimate providing monthly statements for the nonrecurring transactions will require millions of additional pages of paper annually. While FINRA did acknowledge our earlier environmental estimates with regards to requiring monthly statements for all transactions, it seemingly dismissed them without meaningful consideration.

Given the scant record provided by FINRA, we believe the SEC cannot conclude that the proposal should be approved as consistent with applicable statutory requirements with specific regards to requiring monthly statements for any transactions within retirement plans. TC Services and other commenters have simply provided too much evidence that FINRA’s goals are either already met through existing client statements or that there are more effective and less expensive alternatives.

**B. In Reviewing this FINRA Proposal, the SEC Should Consider by Way of Analogy What Courts Find as Adequate Consideration of the Costs and Burdens of Regulatory Rulemaking.**

We believe the failure to adequately address the economic burdens particularly damaging in light of a recent Court of Appeals decision involving Exchange Act Rule 14a-11, the Business Roundtable case.<sup>10</sup> While this case involved the review of the

---

<sup>8</sup> See Amended Proposed Rule Notice Section No. 4, Self-Regulatory Organization’s Statement on Burden on Competition at 46,343.

<sup>9</sup> *Id.*

<sup>10</sup> See *Supra* Note 5.

Commission’s rulemaking under a somewhat different regulatory standard, we nonetheless find instructive the Court’s views on what constitutes a fulsome consideration of the costs and burdens of a regulatory rule proposal.

By way of example, the Court will scrutinize a proposal that opportunistically frames the benefits of a proposal or fails to respond to substantial problems raised by commenters.<sup>11</sup> The Court will discount support in the form of intangible or less readily quantifiable benefits.<sup>12</sup> The Court warns that regulators should be hesitant to rely upon insufficient empirical data when concluding the worth of a proposal’s benefit.<sup>13</sup> Regulatory statements should address the probability the rule will be of no net benefit.<sup>14</sup> Contrast this required analysis with comments FINRA acknowledges receiving:

- “Several commenter expressed concern that customer account statements are less effective at helping customers spot errors, identify theft or other potential problems than ...more timely alternatives.”<sup>15</sup> FINRA’s response was a simple “we disagree” without supporting detail.<sup>16</sup>
- “The commenters state that [requiring monthly statements for retirement plans] would add confusion and place broker-dealers at a competitive disadvantage with few if any benefits.”<sup>17</sup> FINRA did not address this directly.
- “Commenters state that the practical benefits received by investors from monthly statements versus quarterly statements are substantially disproportionate to the inherent cost under a cost benefit analysis.”<sup>18</sup> FINRA responded in cursory fashion with the cost benefits conclusion noted above in Section A.

**C. Extending the Proposal’s Coverage to Retirement Plan Transactions is at Odds with President Obama’s Executive Orders 13563 and 13579.**

The application of the monthly statement requirement against retirement plans would also run afoul of President Barack Obama’s recent series of executive orders asking federal agencies, including independent agencies, to find ways to improve and streamline their regulations.<sup>19</sup> And while perhaps not directly governing the rulemaking of FINRA, we nonetheless find the Order’s guidelines instructive. These Orders collectively ask independent federal agencies review regulations with the following goals in mind.

---

<sup>11</sup> Business Roundtable v. S.E.C., 2011 WL 2936808, at 5.

<sup>12</sup> *Id.*, at 6.

<sup>13</sup> *Id.*

<sup>14</sup> *Id.*, at 11.

<sup>15</sup> See Amended Proposed Rule Notice at 46,342.

<sup>16</sup> *Id.*

<sup>17</sup> *Id.* at 46,343.

<sup>18</sup> *Id.* at 46,342.

<sup>19</sup> See supra note 6.

- “identify and use the best, most innovative, and least burdensome tools for achieving regulatory ends. [Our regulatory system] must take into account benefits and costs...”
- “propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs...”
- “tailor its regulations to impose the least burden on society...”
- “select in choosing among alternative regulatory approaches, those approaches that maximize net benefits (including potential economic, environmental [benefits]...)” [emphasis added]<sup>20</sup>

Allowing retirement plans to continue to rely upon the current construct of immediate confirmation statements for non-recurring transactions and quarterly statements for both non and recurring transactions is consistent with the Orders. The requested exemptive carve out would address FINRA’s stated goals in a manner that is less burdensome, more cost effective and levies a lesser toll on the environment.

#### **D. Proposed Language For an Employer Sponsored Retirement Plan Carve-Out.**

To best address the above concerns, we propose that a new carve-out be added to Section (c)(2) of proposed FINRA Rule 2231. This could be accomplished by adding a new paragraph (f) which specifically excludes “transactions made within employer-sponsored retirement plans.” Furthermore, we suggest that additional Supplementary Materials be added to the Proposed Rule to clarify what is meant by an “employer-sponsored retirement plan” and to specifically exclude brokerage window accounts. We suggest the following:

The term “employer-sponsored retirement plan” means employee pension plans covered by the Employee Retirement Income Securities Act of 1974, as amended, plans described in Internal Revenue Code (“IRC”) sections 401(a), 401(k), 403(b), 408(k), 408(p), 415(m) or 457(b), government and church plans defined in IRC section 414, deferred compensation plans of state and local governments and tax-exempt organizations under IRC section 457(f) and nonqualified deferred compensation arrangements established or maintained by employers or plan sponsors, as well as any investment alternatives designated by such plans into which participant and beneficiaries may direct the investment of assets held in, or contributed to, their individual accounts (but excludes “brokerage windows,” “self-directed brokerage accounts,” or similar plan arrangements that enable participants and beneficiaries to select investments beyond those designated by the plan).<sup>21</sup>

<sup>20</sup> Order 13563, 76 Fed. Reg. at 3821.

<sup>21</sup> We have largely modeled this provision using the concept of a designated investment alternative that is set forth in the recent Department of Labor (“DOL”) regulation governing participant disclosures. Under this regulation, a “designated investment alternative” is defined as “any investment alternative designated by the plan into which participants and beneficiaries may direct the investment of assets held in, or contributed to, their individual accounts. The term ‘designated investment alternative’ shall not include ‘brokerage windows,’ ‘self directed brokerage accounts,’ or similar plan arrangements that enable participants and beneficiaries to select investments beyond those designated by the plan. (See DOL Regulation § 2550.404-a-5(h)(4)). This concept is equally

We acknowledge that, in some cases, a Plan may make a brokerage window (or self-directed brokerage account) available as an investment option to its Plan participants. The brokerage window allows the Plan participant to invest in a wide variety of investments that are not typically pre-screened on behalf of the Plan. For this reason, we believe that brokerage window accounts should be subject to the monthly statement requirement unless one of the Proposed Carve-Outs otherwise apply and should not fall under the more general employer-sponsored retirement plan carve out that we request.

Washington, DC 20549-1090

**Re: Release No. 34-64969; File No. SR-FINRA-2009-28; Filing of Amendment No. 1 to Proposed Rule Change to Adopt FINRA Rule 2231 (Customer Account Statements) in the Consolidated FINRA Rulebook**

Dear Ms. Murphy:

The Securities Industry and Financial Markets Association (“SIFMA”)<sup>1</sup> appreciates the opportunity to comment on the referenced proposal, in which FINRA seeks the Securities and Exchange Commission’s (“SEC”) approval to adopt NASD Rule 2340 as FINRA Rule 2231, with a number of material substantive changes. Through the filing of Amendment No. 1, FINRA proposes to exclude certain account activities from the proposed monthly account statement delivery requirement, clarify when written consent is required to send account statements and other account communications to third parties, and require that members continue to send statements and other account communications to customers, even when directed by the customer in writing to send such account information to a third party.<sup>2</sup>

---

<sup>1</sup> The Securities Industry and Financial Markets Association (“SIFMA”) brings together the shared interests of hundreds of securities firms, banks and asset managers. SIFMA’s mission is to support a strong financial industry, investor opportunity, capital formation, job creation and economic growth, while building trust and confidence in the financial markets. SIFMA, with offices in New York and Washington, D.C., is the U.S. regional member of the Global Financial Markets Association (“GFMA”). For more information, visit [www.sifma.org](http://www.sifma.org).

<sup>2</sup> See Securities Exchange Act Release No. 64969 (July 26, 2011), 76 *Federal Register* 46340 (August 2, 2011) (hereinafter, the “Proposal”).

SIFMA very much appreciates a number of specific changes that FINRA made from the original rule proposal,<sup>3</sup> which were responsive to the comments of SIFMA and others. In particular, we note that FINRA has:

- acknowledged through proposed Rule 2231(c)(2) that certain types of routine activity that do not involve the active participation of the customer (“passive activity”) should not trigger a monthly account statement delivery obligation;
- revised the rule text to clarify that members are not required to obtain the written consent of the customer before sending statements or other account communications for employee-related accounts pursuant to NASD Rule 3050 and Incorporated NYSE Rule 407; and
- confirmed in the response to comments section of the Proposal that members are not required to send account statements to other broker-dealers.

While substantial improvements have been made, SIFMA remains concerned about various provisions in proposed FINRA Rule 2231. Respectfully, as described in detail below, we believe that certain of the changes required by the proposed Rule would impose significant additional costs on FINRA member firms that could outweigh the regulatory benefits of such changes, which have not been clearly articulated by FINRA in the Proposal. As always, SIFMA welcomes the opportunity to discuss with FINRA or the SEC staff any of our comments to the proposed rule changes. Our specific comments are as follows.

## I. Exclusions for Passive Activity

### A. General Comments

Although SIFMA fully supports and appreciates the intent of FINRA’s proposed exclusions from the monthly reporting obligation for certain passive activities found in proposed Rule 2231(c)(2) and notes that these changes would help bring the Rule into better alignment with industry practices, we believe the passive activity exclusions need to be further refined. In our First Comment Letter, we identified five types of passive activity that, in our view, should not trigger a monthly account statement delivery obligation. The last category of passive activity was for “pre-authorized and regularly

---

<sup>3</sup> Securities Exchange Act Release No. 59921 (May 19, 2009), 75 Federal Register 23912 (May 21, 2009) (hereinafter, the “Original Rule Filing”). SIFMA submitted comments on FINRA’s Original Rule Filing in the Spring of 2009. See letter from Sean C. Davy, Managing Director, Corporate Credit Markets Division, SIFMA, dated June 11, 2009 (hereinafter “First Comment Letter”), available at <http://www.sifma.org/issues/item.aspx?id=903>.

scheduled investments in and redemptions from registered investment companies and related distributions from the account (*e.g.*, required minimum distributions from certain tax qualified accounts).” FINRA did not include this type of activity in the list of exclusions in paragraph (c)(2)(B) and offered no explanation for choosing not to. Given that these passive transactions are comparable to the other four activities proposed to be excluded from the monthly statement delivery obligation, we fail to understand why FINRA would not include them. If FINRA is concerned that fund redemptions and related distributions represent withdrawals from the account, thus presenting a greater fraud risk, SIFMA emphasizes again that these concerns should be mitigated by the fact that such transactions are pre-authorized, regularly-scheduled and systemic in nature. SIFMA, therefore, respectfully renews its request in this regard and urges FINRA to exclude the above-described activity from the monthly account statement delivery requirement.

SIFMA also is concerned that proposed Rule 2231(c)(3), which provides that members may rely on an exclusion in paragraph (c) “only if customers are provided access to current account information on their accounts via the Internet *and* by telephone,” will substantially reduce the availability of the passive activity exclusions. We understand that, as a policy matter, FINRA wants customers to have ready access to their account information in order for member firms to be permitted to suppress the monthly statement and SIFMA fully supports the need for investor transparency. However, we respectfully submit that providing customers with access to such information *either* via the Internet *or* by telephone should suffice for these purposes, and would better accommodate the variety of size, structure and technology platforms among FINRA member firms.

In addition, we assume that what FINRA intends with this provision is to require that members *make available as an option* to customers online access to current account information, rather than requiring that customers actually “activate” or “enroll” online access for their accounts. If that was not FINRA’s intention with this provision, the costs associated with this provision would be enormous.<sup>4</sup>

---

<sup>4</sup> We note that, for FINRA member firms with certain business models, “adoption rates” for online account access and electronic delivery of statements is relatively low. By way of example, one firm notes that only 11% of the approximately 5 million customer accounts it custodies have opted to receive statements electronically and only 40% of such customers have opted to view accounts online. If FINRA intended to condition the availability of the exemptions in the Rule on online account enrollment or activation, the Rule would result in 60% more account statements being printed and mailed monthly, instead of quarterly. For just the one firm in this example, this would equate to the mailing of an additional 925,000 statements per month, resulting in 7.4 million additional statements per year, at an additional annual cost of \$5.7 million.

Accordingly, we respectfully submit that proposed Rule 2231(c)(3) be revised to read as follows:

“A member may rely on an exclusion. . . only if the member makes available to its customers the option to access current account information via the Internet or by telephone.”

SIFMA also seeks confirmation that, for purposes of proposed Rule 2231(c), a clearing firm is permitted to rely on its introducing firm “clients” to satisfy the conditions to the exclusions from monthly delivery of account statements, including but not limited to: disclosing the fees and charges contemplated under (c)(2)(D); making available current account information via the Internet or telephone under (c)(3); and receiving written instructions for sending account statements and other account communications to other persons or entities under Supplementary Material .02. This would be consistent with the well established roles and responsibilities of introducing firms and clearing firms in the securities industry. We further request that FINRA specifically state in Rule 2231(c) or Supplementary Material that nothing in this Rule is intended to alter the allocation of responsibilities between a clearing firm and introducing broker-dealers as agreed to in fully-disclosed clearing agreements, amendments, related documents, or under course of conduct.

#### B. Bank Sweep Activity

Proposed FINRA Rule 2231(c)(2)(C) would exclude from the monthly account statement delivery requirement the following account activity: “the transfer of uninvested customer credit balances into or out of money market mutual funds or bank deposits pursuant to a ‘sweep program’ pursuant to consent of the customer and implemented consistent with applicable regulatory guidance, *except where the customer’s balance in the bank deposit “sweep program” during the period exceeds the amount insured by the FDIC coverage.*” (Emphasis added). Although SIFMA greatly appreciates FINRA acknowledging that routine sweep account activity is not the type of account activity that should trigger a monthly statement, we believe the proposed limitation, for those instances in which the customer’s bank sweep program balance exceeds applicable FDIC insurance limitations, should be deleted from the Rule.

SIFMA understands from its member firms that tying the generation or suppression of customer account statements to cash balances held in a customer’s specific bank sweep account would be complex and would require significant and costly technology development enhancements to firms’ systems. We understand that typical firm statement systems today are unable to generate or suppress statements based on the balances held in bank sweep deposit accounts, but rather would need to receive a file of accounts to include or exclude based on the balances and then apply “logic” to generate/suppress statements. The logic required to do this does not exist currently and would need to be developed and tested. We also understand that firms would need to create the necessary files to feed the

statement systems once the logic is built, although creating the file is a simpler task. We understand from one firm that the development work required to build the logic and create the file would take six months to implement and test – and this would only permit generation/suppression of statements by reviewing balances at the account level.

Even if firms were to make the necessary systems changes to trigger statements based on the balance a particular account has in a bank deposit account under a sweep program, however, SIFMA believes this approach could be potentially misleading to customers because the calculation in many cases simply could not take account of the complicated aggregation rules of FDIC insurance. Under the FDIC insurance regime, all of a person's deposits held in each ownership category must be aggregated for purposes of applying the coverage limitation. As such, if a client has multiple sweep accounts held in the same right and capacity, the deposit account balances must be counted together for FDIC insurance purposes. In addition, trust accounts are treated separately and the FDIC coverage varies depending on the type of trust and the number of beneficiaries, and in some cases, their proportionate interest. Beyond sweep deposits, to determine FDIC coverage, a firm also would need to review CDs and other deposits the client holds with the same bank. If the sweep bank is one that permits clients to open deposit accounts directly, such accounts also would affect the determination of a client's FDIC coverage and the broker-dealer in many cases will not have access to this information. Although registered representatives may help a client analyze the FDIC coverage applicable to all the accounts a client and the other members of the client's household maintain, systematically tracking this information in a way that would permit firms to generate or suppress account statements is simply not possible in many cases.

The Rule as proposed would require firms to expend significant amounts of time and money to implement systems that monitor and calculate bank deposits and provide notice, in the form of an account statement, to customers that *may have* exceeded FDIC coverage limits when such requirements are not imposed by any regulations governing the activities of the banks that are in receipt of the deposits. In fact, although the FDIC provides tools to assist depositors in determining whether or not they have exceeded the limits, it does not require that such calculations be performed, or notices be sent that the limits have been exceeded, by the banks which it insures. Such calculations are recognized as the responsibility of each depositor. Moreover, a monthly account statement, being nothing more than a report of the condition of an account at a specific point in time that, by necessity, is not received at least until several days after that point in time has passed, is not the best or most effective means of communicating the information that coverage limits may have been exceeded.<sup>5</sup> For example, as bank sweeps occur whenever there is a free credit balance in the brokerage account, the receipt of funds in the account, including the receipt of interest and dividends, at the end of one statement period (which pursuant to

---

<sup>5</sup> We discuss below that FINRA should consider a broad investor education initiative on this point. See Section VII, "Opportunity for Investor Education," *infra*.

the proposed rule is an activity that by itself would not require delivery of a monthly statement), would require a statement to be delivered if the swept cash might cause an excessive amount to be on deposit at the bank, even if the funds that had been received are invested on the first day of the following statement period. Rather than the statement providing helpful information to the customer, it is more likely to generate confusion.

For the above reasons, we believe that the Rule requires much of broker-dealers in order to provide something that would be of very limited utility for customers. We believe that prominent disclosure on customer account statements and applicable website pages that uninvested cash amounts in excess of applicable FDIC insurance coverage limits are uninsured, along with compliance with the existing regulatory guidance on the use of bank sweep programs,<sup>6</sup> should be sufficient for customers to make an informed decision about whether to reduce the cash balance of their bank sweep accounts. Furthermore, we note that members may rely on this exclusion to provide statements quarterly instead of monthly only when customers are provided current information on customer accounts via the Internet and by telephone.<sup>7</sup> Accordingly, customers of firms relying on this exception already would have immediate access to this cash balance information.

## II. Exclusion for Rule 10b-10 Activity

Proposed FINRA Rule 2231(c)(1) would permit quarterly account statements to be sent to customers instead of monthly account statements if “[t]he member relies on an appropriate rule, regulation, release, interpretation, ‘no-action’ position or exemption issued by the SEC or its staff that (A) specifically applies to the fact situation of the activity; (B) provides relief from the immediate transaction confirmation delivery requirements of SEC Rule 10b-10; and (C) permits quarterly delivery of customer account statements.” SIFMA fully supports proposed Rule 2231(c)(1). However, proposed 2231(c)(3) provides that a member may rely on the exclusions in “this paragraph (c)” only if customers are provided access to current information on their accounts via the Internet and by telephone.<sup>8</sup>

SIFMA does not believe this condition should apply to the exclusion in paragraph (c)(1) for quarterly statements furnished by members pursuant to SEC guidance. Without exception, the SEC guidance upon which the member would be relying already would impose whatever conditions the SEC or its staff felt appropriate; indeed, FINRA

---

<sup>6</sup> See NYSE Information Memo 05-11 (February 15, 2005). See also Securities Exchange Act Release No. 55431, 72 Federal Register 12862 (March 19, 2007) (proposing SEC Rule 15c3-3(j)).

<sup>7</sup> As noted above, SIFMA believes this condition should be revised to permit reliance on this and the other passive activity exclusions when customers are provided the option to access current information on their accounts *either* via the Internet *or* by telephone.

<sup>8</sup> *Id.*

specifically states in proposed Supplementary Material .01 that members remain subject to any conditions imposed by such guidance and that “FINRA Rule 2231 is not intended to alter any such conditions or requirements.”

SIFMA, therefore, respectfully requests that the rule text be amended to make clear that the condition in proposed paragraph (c)(3) apply only to the “passive activity” exclusions in paragraph (c)(2) and not the exclusion for quarterly statements under existing SEC dispensations in paragraph (1).

### III. Transmission of Statements to Other Persons or Entities

Proposed Supplementary Material .02, Transmission of Customer Account Statements to Other Persons or Entities, provides that “[e]xcept as required to comply with NASD Rule 3050 and Incorporated NYSE Rule 407, a member may not address and/or send account statements or other communications relating to a customer’s account to other persons or entities, unless (a) the customer has provided written instructions to the member to send such statements or communications to such person or entity; and (b) the member continues to send such statements or communications, monthly or quarterly as applicable in accordance with this Rule, directly to the customer either in paper format or electronically as provided in Supplementary Material .03 below.”

Although SIFMA appreciates that FINRA has clarified that members are not required to obtain the written consent of the customer before sending duplicate statements and other communications pursuant to NASD Rule 3050 and NYSE Rule 407, SIFMA believes this exception should be broadened under the same logic to permit members to send duplicates to an employer that is a Registered Investment Company or Registered Investment Adviser, both of which are also required to obtain this information about their associated persons’ personal securities dealings pursuant to Rule 17j-1 under the Investment Company Act of 1940 and the provisions of an investment adviser's code of ethics as required by Rule 204A-1 under the Investment Advisers Act of 1940, respectively.

SIFMA also is very concerned about the impact of the new requirement in proposed Supplementary Material .02 (b) that requires members to continue to send account statements or other account communications to the customer directly, even when the customer has provided written instructions to send such account documentation to a third party. We believe that the approach of Incorporated NYSE Rule 409(b) has served both the investing public and the industry quite well and SIFMA is unaware of any problems in this area that would justify such a substantial and costly expansion of account statement delivery obligations. The cost burdens associated with this new requirement would be

particularly severe for member firms where customers have not elected to receive electronic account communications.<sup>9</sup>

Moreover, we believe that imposing an obligation to send sensitive customer information to the customer's address in all cases may in fact increase the risk of breaches of customer confidentiality and worse yet potential fraudulent account activity. For example, an elderly customer living in a nursing home may wish to send account statements and information directly to his or her attorney, as opposed to the nursing home or other permanent residence. Permitting the customer in this example to suppress delivery of statements to his or her address of record would enhance security of the account by greatly reducing the possibility that the account information would be intercepted by an unknown third party.

Accordingly, SIFMA respectfully requests that FINRA delete Supplementary Material .02 (b) from the proposed rule.

Alternatively, FINRA could model proposed Supplementary Material .02 after the requirements of Incorporated NYSE Rule 409(b) for accounts over which the customer has provided a power of attorney,<sup>10</sup> and set out the requirements of .02(a) and (b) disjunctively, thus providing firms with greater flexibility to comply with Rule.

If FINRA were to choose this route, Supplementary Material .02 could be revised to read:

“Except as required to comply with NASD Rule 3050, Incorporated NYSE Rule 407, Rule 17j-1 under the Investment Company Act of 1940, and the provisions of an investment adviser's code of ethics as required by Rule 204A-1 under the Investment Advisers Act of 1940, a member may not address or send account statements or other communications relating to a customer's account to other persons or entities, unless (a) the customer has provided written instructions to the member to send such statements or communications to such person or entity; or (b) the member continues to send such statements or communications, monthly or

---

<sup>9</sup> We note that one firm estimates that 500,000 of 5 million (or 10%) of customer statements are sent to an address other than the legal address of record for the account. Following the example in footnote 4 above, if only 11% of customers have consented to electronic delivery of statements, this could increase statement mailings by 89% for this 10% subset of accounts for both the monthly and quarterly statements cycle. This would translate to increased overall annual statement delivery costs of 8.9% (10% \*.89). The firm with 5 million customer accounts sends an average of 34 million statements annually. Therefore, this would add an estimated additional 3 million statements per year, at a cost of \$2.3 million.

<sup>10</sup> Incorporated NYSE Rule 409(b)(1) permits member first to send confirmations, statements or other communications in care of a person holding power of attorney over the account if: (A) the customer has instructed the member organization in writing to send confirmations, statements or other communications in care of such person; *or* (B) duplicate copies are sent to the customer at some other address designated in writing by him. (Emphasis added).

quarterly as applicable in accordance with this Rule, directly to the customer either in paper format or electronically as provided in Supplementary Material .03 below.

This simple change would permit member firms to continue to honor the requests of their customers to direct account communications to a trusted adviser or attorney-in-fact and avoid the additional costs and potential account security concerns associated with sending account communications to the customer's address of record, even when the customer has designated a third party to receive them.<sup>11</sup>

However, if FINRA seeks approval for Supplementary Material .02 in any form, SIFMA strongly urges FINRA to make clear that the Rule only has prospective application and does not apply retroactively, thereby permitting firms to continue to rely on oral instructions provided by customers under the current regulatory regime prior to the Rule's effective date. This would avoid the burdensome exercise of reviewing and "remediating" existing accounts for which written instructions to address account statements and other account communications to a third party may not have been received, or for which duplicate statements are not sent to customers who have provided written instructions that their statements be sent to third parties in their place, both in reliance upon and in accordance with Incorporated NYSE Rule 409(b). SIFMA firmly believes that imposing such a regulatory cost on member firms is not warranted in this case where no evidence has been presented that the current regulatory regime has been anything less than effective.

Finally, SIFMA asks that FINRA bring to the attention of introducing firm members the impact of the proposed rule change on their obligations. In particular, introducing firms are in the best position to know the customer and, as long recognized through contract and in practice, and as permitted under FINRA Rule 4311, introducing firms are typically allocated the responsibility for opening accounts as well as maintaining and updating customer addresses, which of course ultimately drive the delivery of account statements.

---

<sup>11</sup> We note that proposed FINRA Rule 3150 has the potential to intersect with this aspect of the Proposal insofar as member firms regularly receive requests from clients to send statements to third parties that are trusted agents for receipt of mail purposes. For example, this often happens in jurisdictions where mail delivery is not secure and poses security concerns for the customer and where the customer will appoint a local agent to receive his or her mail. Though cited as an acceptable reason for a "hold mail" request in Proposed Rule 3150, the arrangements described above are not by definition "hold mail" arrangements as the mail is actually delivered to the customer's agent as requested, for further delivery to the client. We note that, while such parties represent trusted "locations" for receipt of mail (as evidenced by the client instruction), such parties do not generally hold a power of attorney ("POA") over the account. We maintain that such arrangements should be permitted with written customer instruction as it would pose substantial issues in terms of managing customer expectations, as well as posing substantial implementation challenges if such arrangements could only be established under a formal POA arrangement. If a customer instruction to hold mail for an acceptable reason is enough to suppress the delivery of statements entirely, a similar instruction by a customer to deliver mail directly to a third-party for legitimate and acceptable reasons should also be sufficient. Under such circumstances as described in the example, requiring that duplicates be sent to the account holder would, in most instances, frustrate the purposes underlying the customer's instruction.

FINRA may wish to confirm the obligations of the introducing firm community in this regard in the Regulatory Notice announcing the final rule's adoption and effective date.

#### IV. Employee Retirement Plans

As SIFMA described in its First Comment Letter, unlike in some other brokerage contexts, monthly reporting would be a significant change from the quarterly reporting standard commonly used today for some employer-sponsored retirement plans. While many transactions effected by general securities members for retirement plans and plan participants are recurring in nature and qualify as 10b-10(b) exempt activity, such as transactions resulting from the regular, periodic contributions the participant makes to his retirement plan account, not all transactions fall into this category. Non-exempt broker-dealer activity that is not accepted as passive activity, such as participant allocation changes, or rebalancing among the plan investment options, would continue to require monthly reporting.

As a result, under the proposed rule change, plan participants would receive quarterly statements with respect to recurring transactions qualifying as 10b-10 exempt activity, while receiving both immediate confirmations and monthly statements for non-exempt activity and non-passive activity. This would create an awkward, bifurcated approach to statement reporting that will surely confuse plan participants. Additionally, it would require systems changes for general securities members to recognize the various transaction trigger points for statements (monthly vs. quarterly), which would be time-consuming and expensive.<sup>12</sup> Moreover, there are important characteristics that distinguish an employer-sponsored retirement plan account from a retail brokerage account and thus make quarterly statements a more sensible alternative. Unlike a retail brokerage account, through which customers generally have the ability to invest in an expansive array of investments, plan participants typically must choose from a limited pre-set menu of investment options selected by the plan sponsor. The investment options commonly consist of mutual funds and/or variable annuities. Additionally, plan rules and the Internal Revenue Code generally restrict withdrawals outside of limited instances such as demonstrated hardship withdrawals or upon retirement.

Accordingly, SIFMA respectfully urges FINRA to adopt a general exclusion to be incorporated in paragraph (c) as follows:

“The activity is a transaction effected for an employer-sponsored retirement plan with respect to which participants and beneficiaries may direct the investment of assets held in, or contributed to, their individual accounts in such plan, other than

---

<sup>12</sup> One member firm estimates the costs of developing the capability to provide monthly statements just for certain isolated transactions will exceed one million dollars.

transactions in “brokerage windows,” “self-directed brokerage accounts,” or similar plan arrangements that enable participants and beneficiaries to select investments beyond those designated by the plan sponsor.”

FINRA could then define in supplementary material:

The term “employer-sponsored retirement plan” means employee pension plans covered by the Employee Retirement Income Securities Act of 1974, as amended, plans described in Internal Revenue Code (“IRC”) sections 401(a), 401(k), 403(b), 408(k), 408(p), 415(m) or 457(b), government and church plans defined in IRC section 414, deferred compensation plans of state and local governments and tax-exempt organizations under IRC section 457(f) (and similar workplace savings plans authorized under the IRC) and nonqualified deferred compensation arrangements established or maintained by employers or plan sponsors, as well as any investment alternatives designated by such plans into which participants and beneficiaries may direct the investment of assets held in, or contributed to, their individual accounts (but excludes “brokerage windows,” “self-directed brokerage accounts,” or similar plan arrangements that enable participants and beneficiaries to select investments beyond those designated by the plan).<sup>13</sup>

So-called “brokerage windows,” “self directed brokerage accounts,” and similar arrangements that enable participants and beneficiaries to select investments beyond those designated by the plan have not been excluded from the monthly account statement delivery requirement. Such accounts allow the participant to invest in a wide variety of investments that are not typically pre-screened by the plan. Participant assets invested in a brokerage window option are held in a brokerage account individually titled in the name of the plan for the specific benefit of the participant. We recognize therefore that, as a policy matter, there is no reason to distinguish these types of arrangements from standard retail brokerage accounts for purposes of the frequency of account statement delivery.

## V. DVP/RVP Accounts

Proposed FINRA Rule 2231(b) provides that account statements need not be sent to a customer pursuant to proposed FINRA Rule 2231(a) if, among other conditions, the

---

<sup>13</sup> This definition is modeled after the concept of a designated investment alternative that is set forth in the recent Department of Labor (“DOL”) regulation governing participant disclosures. Under this regulation, a “designated investment alternative” is defined as “any investment alternative designated by the plan into which participants and beneficiaries may direct the investment of assets held in, or contributed to, their individual accounts. The term ‘designated investment alternative’ shall not include ‘brokerage windows,’ ‘self directed brokerage accounts,’ or similar plan arrangements that enable participants and beneficiaries to select investments beyond those designated by the plan. (See DOL Regulation § 2550.404-a-5(h)(4)). This concept is equally applicable to employer sponsored retirement plans not subject to ERISA and, therefore, we have tailored our proposed Supplementary Material definition of “employer sponsored retirement plan” accordingly.

“customer” consents to the suspension of such statements in writing. SIFMA wishes to confirm that members may treat an institutional customer trading pursuant to discretionary authority in the DVP/RVP account or the authorized person or institution that opened the account as the “customer” for these purposes and collect and maintain the consents from such institutions, instead of the underlying customers.

#### VI. Address Unknown Accounts

SIFMA also requests that FINRA include a new exception from the general requirements of Rule 2231(a) for those accounts that a member firm has identified as “address unknown” or “undeliverable mail” accounts as described below. When a member firm determines that mail is undeliverable, it is a common industry practice to take measures aimed at protecting client privacy and guarding against identity theft and to comply with the abandoned property laws of all U.S. states and territories, including suspending delivery of statements and other communications. In addition, the SEC has proposed amendments to Exchange Act Rule 17Ad-17, among others, to require brokers and dealers to conduct searches for lost securityholders, who are defined to include persons to whom account statements are returned in two consecutive periods.<sup>14</sup> Statement delivery to the incorrect address of lost securityholders serves no useful purpose and poses the risk that account information will be intercepted by an unknown third party or become lost in the mail, and that member firms may lose track of such information in view of the volumes of returned mail involved. SIFMA, therefore, requests that FINRA clarify that firms are not required to deliver statements to lost securityholders when a statement is returned for two consecutive periods, provided that firms follow the procedures otherwise applicable under abandoned property laws and any applicable requirements of Rule 17Ad-17.

#### VII. Implementation

We note that FINRA has set an implementation date that will be “no later than 365 days following Commission approval” of the proposed rules. If FINRA Rule 2231 is adopted as proposed it will require significant changes to systems and operational procedures that

---

<sup>14</sup> The amendment implements Section 929W of the Dodd-Frank Act which directs the SEC to revise Rule 17ad-17 (“Transfer Agents’ Obligation to Search for Lost Securityholders”). A lost securityholder is defined in Rule 17Ad-17(b)(2) to mean “a securityholder: (i) to whom an item of correspondence that was sent to the securityholder at the address contained in the transfer agent’s master securityholder file has been returned as undeliverable; provided, however, that if such item is re-sent within one month to the lost securityholder, the transfer agent may deem the securityholder to be a lost securityholder as of the day the resent item is returned as undeliverable; and (ii) for whom the transfer agent has not received information regarding the securityholder’s new address.” In SIFMA’s comment letter regarding the SEC’s amendments to the lost securityholder Rule 17Ad-17, dated May 9, 2011, SIFMA proposed to limit the type of correspondence which triggers the “lost securityholder” designation to returned annual tax forms (*e.g.*, Forms 1099), returned checks, or account statements returned in two consecutive periods.

will require extensive efforts to comply with the new Rule.<sup>15</sup> Furthermore, the SEC has proposed revisions to Exchange Act Rule 17a-5 that will require clearing members to file a new Custody Form report asserting compliance with various reporting rules including those related to delivery of account statements.<sup>16</sup> These compliance reports will be subject to review by external auditors. In view of the substantial compliance efforts expected to be required in connection with adoption of the new rule and increased regulatory significance of these obligations arising under independent rulemaking, we urge FINRA to provide members with the benefit of at least a full one-year period.

#### VIII. Opportunity for Investor Education

Finally, as discussed throughout this letter, SIFMA believes that investor transparency is important and that online or telephonic access to account information can provide investors with information on account activities and balances that is, in fact, much more timely than that included on periodic account statements. Although member firms have sought to encourage customers to take advantage of such access and to increase the adoption rate for electronic communications, such adoption rates remain relatively low for certain business models. SIFMA believes that this rulemaking proceeding presents an opportunity for FINRA to educate investors more broadly (through the FINRA website, for example) about alternatives for accessing timely information regarding their accounts.

Tim,

How about 4/29 at 12:30-1:30 p.m.? We've been having difficulty finding a good meeting time that is about two weeks away.

If this doesn't work, we'll keep looking.

Best,

Lourdes

### **Papers of Possible Interest Concerning the Limitations of Disclosure**

**Beshears, John, James Choi, David Laibson and Brigitte Madrian. (2009). "How does simplified disclosure affect individuals' mutual fund choices?" Working Paper No. 14859. Cambridge, MA: National Bureau of Economic Research.**

Abstract: We use an experiment to estimate the effect of the SEC's Summary Prospectus, which simplifies mutual fund disclosure. Our subjects chose an equity portfolio and a bond portfolio. Subjects received either statutory prospectuses or Summary Prospectuses. We find no evidence that the Summary Prospectus affects portfolio choices. Our experiment sheds new light on the scope of investor confusion about sales loads. Even with a one-month investment horizon, subjects do not avoid loads. Subjects are either confused about loads, overlook them, or believe their chosen portfolio has an annualized log return that is 24 percentage points higher than the load-minimizing portfolio.

**Cain, Daylian, George Loewenstein and Don Moore. (2011) "When Sunlight Fails to Disinfect: Understanding the Perverse Effects of Disclosing Conflicts of Interest," *Journal of Consumer Research*, Vol. 37.**

Abstract: Disclosure is often proposed as a remedy for conflicts of interest, but it can backfire, hurting those whom it is intended to protect. Building on our prior research, we introduce a conceptual model of disclosure's effects on advisors and advice recipients that helps to explain when and why it backfires. Studies 1 and 2 examine psychological mechanisms (strategic exaggeration, moral licensing) by which disclosure can lead advisors to give more-biased advice. Study 3 shows that disclosure backfires when advice recipients who receive disclosure fail to sufficiently discount and thus fail to mitigate the adverse effects of disclosure on advisor bias. Study 4 identifies one remedy for inadequate discounting of biased advice: explicitly and simultaneously contrasting biased advice with unbiased advice.

**Choi, James David Laibson, and Brigitte Madrian. (2010). "Why does the law of one price fail? An experiment on index mutual funds," *Review of Financial Studies*, 23 (4): 1405-1432.**

Abstract: We evaluate why individuals invest in high-fee index funds. In our experiments, subjects each allocate \$10,000 across four S&P 500 index funds and are rewarded for their portfolio's subsequent return. Subjects overwhelmingly fail to minimize fees. We reject the hypothesis that subjects buy high-fee index funds because of bundled non-portfolio services. Search costs for fees matter, but even when we eliminate these costs, fees are not minimized. Instead, subjects place high weight on annualized returns since inception. Fees paid decrease with financial literacy. Interestingly, subjects who choose high-fee funds sense they are making a mistake.

**Church, Bryan and Xi Kuang. (2009) "Conflicts of Interest, Disclosure and (Costly) Sanctions: Experimental Evidence," *Journal of Legal Studies*.**

Abstract: Conflicts of interest may compromise individuals' independence in providing advisory services. Full disclosure is a commonly recommended remedy for the adverse effect of conflicts of interest. Yet prior study shows that disclosure may not have the intended effect because it provides individuals with moral license to engage in self-interested behavior, thereby exacerbating biases. We follow up on this research and seek to determine whether other institutional factors may negate the potentially harmful effects of disclosure. We conduct a laboratory experiment, focusing on behavior in an investor/financial adviser dyad, including important

representative features in this setting. Our results suggest that disclosure is not necessarily detrimental. We find that investors are better off when conflicts of interest are disclosed and sanctions are available, even though initiating sanctions is costly to investors. Under such conditions, advisers' bias is dampened markedly.

**Dominitz, J. A. Hung, et al. (2007). "How Do Mutual Fund Fees Affect Investor Choices?" RAND Corporation.**

Over the past few decades, risks associated with providing for financial security in retirement have increasingly shifted from employers to employees as employer-provided pensions have shifted from defined-benefit to defined-contribution (DC) plans. Recent work in behavioral finance suggests that investors do not make optimal investment decisions in their DC plans. We designed and administered a pair of mutual fund choice experiments to over 1000 survey respondents who participate in the RAND American Life Panel. Our analysis sheds light on the question of how mutual fund investors respond to variation in fees in a hypothetical scenario in which fees should be obvious to the investor. The results show that some aspects of individual behavior are consistent with rational wealth-maximization and the majority of the respondents are able to provide estimates of fees that lie within a benchmark range. However, we find that respondents tend not to minimize expected fees and are more averse to backend load fees than to front-end loads. The trade-off between expense ratios and loads is found to be somewhat sensitive to the expected holding period in a manner consistent with expected-wealth maximization, but investors may tend to be too averse to loads. Differences in measured financial literacy predict differences in behavior, with lower rates of literacy among women accounting for differences in choice behavior by gender. We also find that financial literacy mediates individual responses to the presentation of information intended to enhance decision making.

**Dopuch, N., R. R. King, et al. (2003). "Independence in Appearance and in Fact: An Experimental Investigation," *Contemporary Accounting Research* 20(1): 79-114.**

In this study, we use experimental markets to assess the effect of the SEC's new Independence Rule on investors' perceptions of independence, market prices, and investors' payoff distributions. The new rule requires client firms to disclose in their annual proxy statements the amount of non-audit fees paid to their auditors. The new disclosure is intended to inform investors of auditors' incentives to compromise their independence. Our experimental design is a 2x3 between-subject design, where we control the presence (unbiased reports) or absence of auditor independence in fact (biased reports). While independence in fact was not immediately observable to investors, we controlled for independence in appearance by varying the public disclosure of the extent of non-audit services provided by the auditor to the client. In one market setting, investors were not given any information about whether the auditor provided such non-audit services; in a second setting, investors were explicitly informed that the auditor did not provide any non-audit services, and in a third setting, investors were told that the auditor provided non-audit services that could be perceived to have an adverse effect on independence in fact. We found that disclosures of non-audit services reduced the accuracy of investors' beliefs of auditors' independence in fact when independence in appearance was inconsistent with independence in fact. This then caused prices of assets to deviate more from their economic predictions (lower market efficiency) in the inconsistent settings relative to the no-disclosure and consistent settings. Thus, disclosures of fees for non-audit services could reduce the efficiency of capital markets if such disclosures result in investors forming inaccurate beliefs of auditor independence in fact – that is, auditors appear independent but they are not independent in fact, or vice versa. The latter is the maintained position of the AICPA, which argued against the new rule. Further

research is needed to assess the degree of correspondence between independence in fact and independence in appearance.

**Fung, Archon, Graham, Mary, Weil, David and Fagotto, Elena. (2004). "The Political Economy of Transparency: What Makes Disclosure Policies Effective?" KSG Working Paper No. RWP03-039, Institute for Government Innovation, John F. Kennedy School of Government, Harvard University OPS-02-03. Available at SSRN: <http://ssrn.com/abstract=766287> or <http://dx.doi.org/10.2139/ssrn.766287>**

Abstract: Regulatory transparency - mandatory disclosure of information by private or public institutions with a regulatory intent - has become an important frontier of government innovation. This paper assesses the effectiveness of such transparency systems by examining the design and impact of financial disclosure, nutritional labeling, workplace hazard communication, and five other diverse systems in the United States. We argue that transparency policies are effective only when the information they produce becomes "embedded" in the everyday decision-making routines of information users and information disclosers. This double-sided embeddedness is the most important condition for transparency systems' effectiveness. Based on detailed case analyses, we evaluate the user and discloser embeddedness of the eight major transparency policies. We then draw on a comprehensive inventory of prior studies of regulatory effectiveness to assess whether predictions about effectiveness based on characteristics of embeddedness are consistent with those evaluations.

**Gabaix, Xavier and David Laibson. (2006). "Shrouded Attributes, Consumer Myopia, and Information Suppression in Competitive Markets," *The Quarterly Journal of Economics*. May 2006.**

Abstract: Following Becker (1957) we ask whether competition eliminates the effects of behavioral biases. We study products with add-ons. In competitive markets with costless communication, Bayesian consumers infer that hidden prices are likely to be high prices. Hence, firms choose not to shroud information. However, information shrouding may occur in an economy with some myopic consumers. Such shrouding creates an inefficiency. Sometimes firms have an incentive to eliminate this inefficiency by educating their competitors' myopic consumers. However, if add-ons have close substitutes, a "curse of debiasing" arises, and firms will not be able to profitably debias consumers by unshrouding add-ons. In equilibrium, two kinds of exploitation coexist. Optimizing firms exploit myopic consumers through marketing schemes that shroud high-priced add-ons. In turn, sophisticated consumers exploit these marketing schemes. It is not profitable to lure either myopes or sophisticates to non-exploitative firms. We show that informational shrouding flourishes even in highly competitive markets, even in markets with costless advertising, and even when the shrouding generates allocational inefficiencies.

**Koch, Christopher and Carsten Schmidt. (2010). "Disclosing Conflicts of Interest-Do Experience and Reputation Matter," *Accounting, Organizations and Society* Vol. 35.**

Abstract: In a controlled laboratory experiment, we investigate the effects of disclosing conflicts of interest on the reporting behaviour of information providers. First, we replicate the findings of Cain, Loewenstein, and Moore (Cain, D.M., Loewenstein, G., & Moore, D.A. (2005). The dirt on coming clean: Perverse effects of disclosing conflicts of interest. *Journal of Legal Studies* 34, 1-25) that such disclosure can trigger more biased reporting, since it removes moral concerns. Second, we show that this effect diminishes or even reverts with experience and reputation. Third, we observe that non-disclosure can have the positive effect of facilitating the formation of reputation.

**Loewenstein, George, Daylian M. Cain, and Sunita Sah. (2011). "The Limits of Transparency: Pitfalls and Potential of Disclosing Conflicts of Interest," *American Economic Review: Papers and Proceedings*, 101(3): 423-28.**

Abstract: We review evidence from our published and ongoing research that disclosing conflicts of interest has unintended consequences, helping conflicted advisors and harming their advisees: With disclosure, advisors feel comfortable giving more biased advice, but advisees do not properly adjust for this and generally fail to sufficiently discount biased advice. Disclosure also increases pressure on advisees to comply with advice; following disclosure, advisees feel more uncomfortable in turning down advice (e.g., it signals distrust of the advisor's motives). Finally, we examine the effectiveness of policy interventions aimed at reducing these unintended consequences and discuss how to realize potential benefits of disclosure.

**Nash, J. (2009). "2 of 3 participants don't read info," *Pensions & Investments*, 37(21): 2-42.**

Just because participants in 401(k) plans have investment information doesn't mean they'll read it, a J.P. Morgan Retirement Plan Services survey showed. Two-thirds of 401(k) participants don't read investment information provided by their plan executives, according to the survey a surprising finding given the calls by some legislators for defined contribution plan executives and money managers to provide participants with more fee disclosure and financial information, said Diane Gallagher, vice president and head of participant communications and education at Kansas City, Mo.-based J.P. Morgan.

**Robertson, Christopher T. (2011). "Biased Advice," *Emory Law Journal*, Vol. 60, p. 653, 2011; Arizona Legal Studies Discussion Paper No. 11-07. Available at SSRN: <http://ssrn.com/abstract=1762266>**

Abstract: The modern capitalist society, characterized by decentralized decision making and increasingly sophisticated products and services, turns on relationships of epistemic reliance, where laypersons depend upon advisors to guide their most important decisions. Yet many of those advisors lack real expertise and may be biased by conflicting interests. In such situations, laypersons are likely to make suboptimal decisions that sometimes aggregate into systematic failures, from soaring health care costs to market crashes. Regulators can attempt to manage the symptoms and worst abuses, but the fundamental problem of biased advice will remain. There are many potential policy solutions, from outright bans on conflicting interests to disclosure mandates, yet their comparative effectiveness is poorly understood. By constructing a decision task for human subjects and providing advice in various scenarios, this Article reports new field experiments testing alternative policy mechanisms. Prior research has shown that disclosure mandates can be deleterious if they make advisors more biased, but this paper contextualizes those findings. It turns out that disclosures may be valuable in settings where relative expertise is low, but deleterious where relative expertise is high. By also disaggregating the data, one finds that disclosures of conflicting interests may hurt laypersons in the majority of situations where the conflicted advice is not actually biased. Thus, the evidence suggests that, if they are to be at all effective, disclosure mandates should be narrowly tailored. Most importantly, the evidence shows that a disclosure mandate improves layperson performance when unbiased advisors are also available. Yet laypersons appear to be poor judges of their need for unbiased advice, so market mechanisms may be ineffective for provisioning unbiased advice. In the end, the presence of an unbiased advisor is the strongest determinant of layperson performance, and thus policymakers must develop ways of aligning the interests of advisors and laypersons. Pay-for-performance, blinding of experts, and mandatory or subsidized second-opinion policies are likely to be helpful in aligning these interests.

**Weil, David, Archon Fung, Mary Graham, Elena Fagotto. (2006). "The Effectiveness of Regulatory Disclosure," *Journal of Policy Analysis and Management*, Vol. 26, No. 1: 155-181.**

Regulatory transparency—mandatory disclosure of information by private or public institutions with a regulatory intent—has become an important frontier of government innovation. This paper assesses the effectiveness of such transparency systems by examining the design and impact of financial disclosure, nutritional labeling, workplace hazard communication, and five other diverse systems in the United States. We argue that transparency policies are effective only when the information they produce becomes “embedded” in the everyday decision-making routines of information users and information disclosers. This double-sided embeddedness is the most important condition for transparency systems’ effectiveness. Based on detailed case analyses, we evaluate the user and discloser embeddedness of the eight major transparency policies. We then draw on a comprehensive inventory of prior studies of regulatory effectiveness to assess whether predictions about effectiveness based on characteristics of embeddedness are consistent with those evaluations.

**From:** Porter, Jennifer R. [REDACTED]@SEC.GOV]  
**Sent:** Tuesday, September 30, 2014 10:55 AM  
**To:** Hauser, Timothy - EBSA  
**Subject:** Follow-up from 9/26 call with SEC/DOL/Treasury

Tim,

On the call with DOL and Treasury staff on Friday, we said that we would send links to information about investor testing and to examples of broker-dealer's firm brochures. That information is below. Please let me know if it would help for me to send this to all of the individuals included on the meeting invitation on Friday, or if I should send it to a smaller subset of individuals.

**Investor Testing links:**

Staff pulled selected documents relating to the point of sale rulemaking and Section 917 Study that we think would be most useful based on our conversations (but this should not be viewed as the entire universe of materials).

Study Regarding Financial Literacy Among Investors As Required by Section 917 of the Dodd-Frank Wall Street Reform and Consumer Protection Act  
<http://www.sec.gov/news/studies/2012/917-financial-literacy-study-part1.pdf>

Results of Investor Interviews to Test Oral Point of Sale Disclosure; Supplemental Report to the Securities and Exchange Commission (June 1, 2005)  
<http://www.sec.gov/rules/proposed/s70604/supprpt060105.pdf>

Results of In-Depth Investor Interviews Regarding Proposed Mutual Fund Sales Fee and Conflict of Interest Disclosure Forms  
(Note: This report serves as a supplement to the existing Results of In- Depth Investor Interviews Regarding Proposed Mutual Fund Sales Fee and Conflict of Interest Disclosure Forms, dated November 4, 2004. Supplemental Report to the Securities and Exchange Commission November 29, 2004)  
<http://www.sec.gov/rules/proposed/s70604/sup-rep010705.pdf>

Results of In-Depth Investor Interviews Regarding Proposed Mutual Fund Sales Fee and Conflict of Interest Disclosure Forms Report to the Securities and Exchange Commission November 4, 2004  
<http://www.sec.gov/rules/proposed/s70604/rep110404.pdf>

-

**Links to certain firms' compensation-related disclosures and, for some firms, their separate revenue sharing disclosures:**

Staff pulled a random sampling of brochures that we thought may be of interest based on Friday's conversation. That being said, firms generally have a variety of brochures addressing a number of different areas on their websites (with more or less detail). If you are interested in something different than is captured below, we would suggest referring to each firm's website to see if there is something more on point.

Mr. Beckmann,

As you can see from the below back and forth with Daniel, he asked for different broker-dealer statistics at different times.

I'm not sure what the release you are working on is about.

Are you only looking for the number of broker-dealers registered with the Commission as of 12/31/2013?

On the revenue numbers, broker-dealers' FOCUS reports and the data contained therein is confidential.

If you are looking for information to address the Regulatory Flexibility Act requirements, Dan and I spoke of this last March. At that time, I suggested that he look at and possibly cite to one of the Commission's releases (see attachment). Since that time the Commission has published other releases that contain more up-to-date information. For instance, you could review this one - <http://www.sec.gov/rules/final/2013/34-70073.pdf>.

Bonnie.

**Subject:** RE: Broker-dealer numbers

Hi Bonnie,

You communicated with my colleague Dan Puskin last year regarding some broker-dealer registration statistics. Dan has left the office, and I've taken over some of his responsibilities. Do you have updated data for 2013 (or more recent) of the number of broker-dealers registered with the SEC? Additionally, do you have data on the broker-dealer revenue? Would it be possible to determine the number of broker-dealers with less than \$7 million in annual revenue?

Thanks,  
Allan Beckmann

Hi Dan!

I believe the answer to both of these questions is no.

First, what is the definition of "discount broker?" A lot of people use that term, but I don't believe there is one definition. Also, I don't believe it is a question the Commission asks on any of its forms.

I also don't believe there is a way to easily isolate those BDs that might be associated with insurance companies. While the SEC probably receives information in this regard, it would not be in a format that would be searchable.

Sorry!

Bonnie

**Sent:** Monday, December 31, 2012 1:53 PM  
**To:** Puskin, Dan - EBSA  
**Cc:** Beckmann, Allan - EBSA  
**Subject:** RE: Broker-dealer numbers

Hi Dan!

The study you point to was issued by the Commission on January 22, 2011. On page 8 of this study, the Commission states, "Currently, the Commission oversees approximately 5,100 broker-dealers<sup>11</sup>..."

The corresponding footnote reads, "Unless otherwise specified, the statistics in Section II.A.2 are based on data derived from broker-dealers' responses to questions on the Uniform Application for Broker-Dealer Registration ("Form BD") reported through the Central Registration Depository ("CRD") as of September 30, 2010...."

I would highlight here that the text and footnote indicate that the number of broker-dealers is both "approximate," and based on data collected by the Commission "as of September 30, 2010."

In October, I provided you with data on the number of broker-dealers registered with the Commission as of the calendar years ending December, 2010 and December, 2011.

I hope this addresses your concerns.

**Cc:** Beckmann, Allan - EBSA  
**Subject:** RE: Broker-dealer numbers

Dear Dan,

Perhaps I am mistaken, but I didn't read Bonnie's message to mean that the BD number is overstated; I read it to mean that to get the data you were looking for you should reduce the number of Forms BD and Forms BDW filed to account for duplicate filings. I believe you can rely on her 4,813 number as the correct number of total number of BDs.

I'm not sure what the 5,100 number is based on. Would it be OK to wait until Bonnie returns on Monday and she can ask the person who gave her the other statistics? Perhaps that person knows.

Thanks,

Margaret

Dear Ms. Smith,

The only number we need is the total number of broker-dealers. The 5,100 Broker-Dealers estimate in the Dodd-Frank report is based on 2009 numbers. If there was an updated estimate for the total number of broker dealers, that would be very helpful. Here is a link to the version of the report we've been looking at:

[www.sec.gov/news/studies/2011/913studyfinal.pdf](http://www.sec.gov/news/studies/2011/913studyfinal.pdf)

**Cc:** Beckmann, Allan - EBSA  
**Subject:** RE: Broker-dealer numbers

Thank you so much for your help in October. The statistics on new broker-dealers have been very useful! I now have a follow up question. In SEC's Dodd-Frank report (*Study on Investment Advisers and Broker-Dealers*), there is a passage that reads as follows:

*“Broker-Dealers: The Commission and FINRA oversee approximately 5,100 broker-dealers. As of the end of 2009, FINRA-registered broker-dealers held over 109 million retail and institutional accounts. Approximately 18% of FINRA-registered broker-dealers also are registered as investment advisers with the Commission or a state. Most broker-dealers receive transaction-based compensation.”*

Is it possible to get more updated numbers for the total number of broker-dealers based on 2011 or 2012 submissions?

Happy Holidays,  
Daniel

**Sent:** Friday, October 05, 2012 4:00 PM  
**To:** Puskin, Dan - EBSA  
**Subject:** Broker-dealer numbers

Hi Daniel!

I guess we don't keep track of the number of new BDs registered and the number of BDs that exited – instead we keep track of the number of Forms BD (to initiate registration) and BDW (to withdraw

from registration) filed.

These numbers are as follows:

Forms BD filed in the calendar year ending 12/31/2009 - 337

Forms BD filed in the calendar year ending 12/31/2010 - 285

Forms BD filed in the calendar year ending 12/31/2011 - 216

Forms BDW filed in the calendar year ending 12/31/2009 - 285

Forms BDW filed in the calendar year ending 12/31/2010 - 549

Forms BDW filed in the calendar year ending 12/31/2011 – 378

These would include possible duplicate filings (deficient Forms BDW where the firm was required to re-file the Form, and BD apps that were never accepted or were withdrawn before they started business). The expert here who deals with these filings suggests reducing the number of Forms BD by 5% and the number of Forms BDW by 10% to account for these duplicates.

As you are an economist, I am providing the raw numbers and the suggested reductions to allow you the ability to either retain the raw number or reduce the raw numbers, as suggested.

In addition, the total number of broker-dealers and the number of small broker-dealers registered with the Commission as of 12/31/2009, 12/31/2010, and 12/31/2011 were 5,257 and 927, 5,061 and 841, and 4,813 and 808, respectively.

I hope this is helpful to you.

Have a terrific weekend!

Bonnie Gauch

Hi Dan!

Here is a rule release with a good discussion of the small business issue:

<http://www.sec.gov/rules/proposed/2007/34-55431fr.pdf>.

I had to go back a couple of years because since Dodd-Frank the rulemakings seem to be more about security-based swap dealers rather than broker-dealers.

Attached also is a release regarding our rule wherein we define the term "small entity" with respect to broker-dealers (at bottom of third column).

I hope these are helpful.

Bonnie

Hi Bonnie,

Sorry to bombard you with questions. Is there any way to know the distribution of the size of the registered BD firms (i.e. assets under management, employees per firm)? In our regulatory analyses, we need to analyze how our rules may impact small businesses.

All the best,  
Dan

**SECURITIES AND EXCHANGE  
COMMISSION****17 CFR Part 211**

[Release No. 34-18451; AS-305]

**Statement of Management on Internal  
Accounting Control****AGENCY:** Securities and Exchange  
Commission.**ACTION:** Interpretive release.

**SUMMARY:** The Commission announces that it is no longer considering further action to require disclosure of a statement of management on internal accounting control in annual reports to security holders or filings with the Commission. In reaching this conclusion the Commission has considered the significant private-sector initiatives in this area, including the increased number of management reports included in annual reports to security holders of large companies.

**EFFECTIVE DATE:** January 28, 1982.

**FOR FURTHER INFORMATION CONTACT:** David F. Martin or Edmund Coulson (202-272-2130), Office of the Chief Accountant, Securities and Exchange Commission, 500 North Capitol Street NW., Washington, D.C. 20549.

**SUPPLEMENTARY INFORMATION:****I. Background**

On June 6, 1980, the Commission issued ASR 278\* that announced the withdrawal of rule proposals which, if adopted, would have required inclusion of a statement of management on internal accounting control in annual reports on Form 10-K filed with the Commission under the Securities Exchange Act of 1934 and in annual reports to security holders furnished pursuant to the proxy rules. The rule proposals would also have required that the management statement be examined and reported on by an independent accountant.

The Commission's decision to withdraw the rule proposals was based, in part, on a determination that the private-sector initiatives for public reporting on internal accounting control had been significant and should be allowed to continue. The Commission stated its belief that this action would encourage further voluntary initiatives and permit public companies a maximum of flexibility in experimenting with various approaches to public

reporting on internal accounting control. The Commission urged similar experimentation concerning auditor association with such statements.

In conjunction with the withdrawal of the rule proposals, the Commission announced its intention to monitor registrants' voluntary disclosure of management statements on internal accounting control and reports of independent accountants on such statements and implementation of the broader recommendations of the Commission on Auditors' Responsibilities (Cohen Commission) concerning comprehensive management reports.

**II. Activities After ASR 278**

Since ASR 278 was issued, the Commission's staff has reviewed a sample of annual reports to security holders. The results of the review indicate a significant increase, particularly in larger companies, in the number of annual reports which include a management report. Several surveys conducted by private-sector organizations indicate similar results.

In addition to comments about the system of internal accounting control, many reports have included comments on topics recommended by the Cohen Commission, the Financial Executives Institute (FEI) and the Special Advisory Committee on Reports by Management of the American Institute of Certified Public Accountants (AICPA). The variety of reports demonstrates the willingness of public companies to experiment with a new form of reporting and to avoid boiler-plate reporting.

Certain private-sector groups have taken actions which indicate that the private sector continues to be generally supportive of the development of the concept of management reports and is seeking to improve internal accounting control systems. As noted in ASR 278, the AICPA and FEI have encouraged the development of management statements. In August 1981, the American Bar Association Section of Corporation, Banking and Business Law approved a Discussion Paper which encourages the use of company reports. In addition, the FEI has sponsored extensive research in the area of internal controls. This research resulted in the publication in 1980 of a research study and report titled "Internal Control in U.S. Corporations: The State of the Art" and, just recently, a report on "Criteria for Management Systems." The current research project is exploring criteria for management use and control of data processing systems. The Commission is encouraged by this kind

of private sector research effort which should lead to continued improvements in corporate internal control systems.

The experimentation with public reporting by independent accountants on internal accounting control systems has not yet had time to develop. In July 1980, the AICPA's Auditing Standards Board issued Statement on Auditing Standards No. 30 (SAS 30), "Reporting on Internal Accounting Control," which sets forth guidance for auditors on how to review and report on a system of internal accounting control. As companies and their auditors become more familiar with the provisions of SAS 30 they may be able to integrate SAS 30 review procedures into annual audit procedures. Such integration may facilitate the conduct of these reviews and could result in increased reporting pursuant to SAS 30.

**III. Conclusion**

Although the importance to companies of effective systems of internal accounting control has not diminished, the Commission now believes that there is no need for a regulatory requirement for disclosures about such systems. In the light of developments since the issuance of ASR 278, the Commission now believes that the private sector should determine the need for and nature of such disclosure. In reaching this conclusion the Commission has considered the significant private-sector initiatives in this area, including the increased number of management reports to security holders of large companies.

By the Commission.  
George F. Fitzsimmons,  
Secretary.

**SUPPLEMENTARY INFORMATION:** On March 20, 1981, in Release 33-6302 (46 FR 19251) the Commission proposed rules to define the terms "small business" and "small organization," for the purposes of Chapter Six of the Administrative Procedure Act, 5 U.S.C. 601 et seq., (the Regulatory Flexibility Act, Pub. L. No. 96-354, 94 Stat. 1164 (September 19, 1980)), as those terms may apply to organizations and entities that are issuers of securities or otherwise engaged in securities or other business activities subject to disclosure and reporting requirements or regulation

by the Commission pursuant to the Securities Act of 1933, 15 U.S.C. 77a et seq., (the "Securities Act"), the Securities Exchange Act of 1934, 15 U.S.C. 78a et seq., (the "Securities Exchange Act"), the Public Utility Holding Company Act of 1935, 15 U.S.C. 79a et seq., (the "Holding Company Act"), the Trust Indenture Act of 1939, 15 U.S.C. 77aaa et seq., (the "Trust Indenture Act"), the Investment Company Act of 1940, 15 U.S.C. 80a et seq., (the "Investment Company Act"), or the Investment Advisers Act of 1940, 15 U.S.C. 80b-1 et seq., (the "Advisers Act"). The Regulatory Flexibility Act (the "RFA") requires that the Commission, among other things, consider the economic impact of Commission rulemaking action on entities that qualify as "small" under applicable standards as set forth in the RFA, the Small Business Act<sup>1</sup> or the regulations promulgated by the Small Business Administration ("SBA").<sup>2</sup> In view of the apparent absence of appropriate standards in those statutes and regulations for defining small entities subject to its regulation, the Commission proposed for public comment pursuant to the RFA definitions that it considered appropriate to the regulation of issuers and other entities in the securities industry or otherwise subject to regulation under statutes administered by the Commission.<sup>3</sup> After consultation with the Office of Advocacy of the SBA and considering the comments received from the public on the proposed definitions, the Commission is now adopting final definitions, which are discussed in more detail below. Although the definitions will be generally applicable in Commission rulemaking, the rules also provide, as permitted by the RFA, that the Commission may, in particular instances, if the circumstances so warrant, define a particular entity in a manner different from that set forth in the rules. In any such case, appropriate notice will be provided that the Commission intends to use or is using a different definition.

<sup>1</sup> 15 U.S.C. 631 et seq.

<sup>2</sup> 13 CFR Part 121.

<sup>3</sup> The RFA provides that an agency, after consultation with the Office of Advocacy of the SBA and an opportunity for public comment, may establish one or more definitions of "small entity" that are applicable to the activities of the agency. See Securities Act Release No. 6302 (March 20, 1981), 22 SEC Doc. 546 (April 7, 1981), for a discussion of the reasons why the Commission considered the SBA definitions inappropriate.

**Description of the Final Definitions**

*Securities Act—Issuers Engaged in Small Business Financing; The Securities Exchange Act—Reporting Requirements, Tender Offers, Issuer Repurchases, Proxy Rules, and Short Swing Profits.*

In the release proposing the definitions of "small business" and "small organization" for purposes of the Regulatory Flexibility Act (the "RFA")<sup>4</sup> the Commission proposed to amend its rules under the Securities Act of 1933<sup>5</sup> (the "Securities Act") by adding new Rule 157<sup>6</sup> which would define those terms to mean any issuer, other than an investment company, that is engaged in small business financing and whose total assets on the last day of its most recent fiscal year were \$2.5 million or less. Small business financing is defined to mean any issuer that is engaged or proposed to engage in the offer and sale of its securities that does not exceed the dollar limitation prescribed by Section 3(b) of the Securities Act.

Similarly, for purposes of the RFA, the Commission proposed a definition of "small business" and "small organization" which, when used in reference to entities that are subject to the reporting provisions of the Securities Exchange Act of 1934,<sup>7</sup> ("the Securities Exchange Act"), pursuant to Sections 12, 13, 14, 15(d) and 16 of that Act, would mean an issuer that on the last day of its most recent fiscal year had assets of \$2.5 million or less.

The asset tests proposed in the definitions under both the Securities Act and the Securities Exchange Act were intended to reflect an inflationary adjustment to the \$1 million asset test, established for reporting purposes in the 1964 Amendments.<sup>8</sup>

The proposed Securities Act definition included a size of the offering standard in addition to an asset test primarily because the Securities Act is transaction oriented; *i.e.*, the registration of securities under the Securities Act is required only when certain transactions are proposed or occur.<sup>9</sup> Moreover there

<sup>4</sup> Release No. 33-6302, 34-17645 (March 20, 1981) (46 FR 19251).

<sup>5</sup> 15 U.S.C. 77a-77aa, as amended.

<sup>6</sup> 17 CFR 230.157.

<sup>7</sup> 15 U.S.C. 78a-78j, as amended.

<sup>8</sup> 78 Stat. 565 (U.S. Code Cong & Ad. News 2798 (1964)). In the proposing release the Commission noted that an inflationary adjustment to the \$1 million asset test established in Section 12(g) of the Securities Exchange Act would result in a \$2,470,000 asset threshold in 1979.

<sup>9</sup> Congress has consistently recognized that a Securities Act exemption based on the size of the

Continued

exists substantial factual data indicating a significant direct relationship between the size of the offering and the size of the issuer.<sup>10</sup> It was anticipated that this standard would assure that any evaluation of the impact of compliance regarding proposed or adopted rules under the Securities Act would include only an analysis of those issuers for which fixed costs become disproportionately expensive.

The Commission received eleven comments regarding the proposed standards. Several of these commentators urged that the total asset criterion should be raised, with the recommendations ranging from \$4 million to \$15 million. In several cases no justification was presented for the standards recommended.

The SBA, in its comments on the proposed standards, supported increasing the total asset threshold to \$15 million on the ground that while the total number of shareholders affected by such a standard would be relatively small, the number of issuers which would fall within the definition of "small business" would significantly increase. This, the SBA argues, would bestow substantial regulatory cost savings upon issuers without significantly diluting investor protection for large numbers of shareholders. In making this recommendation, however, the SBA does not maintain that any direct or indirect correlation exists between the ability of an issuer to bear the costs of regulation and the total number of shareholders which would be affected by a specified size standard. Since the basic concept underlying the RFA is that uniform regulations often have a disproportionately greater economic impact upon small businesses, and thus upon their competitive position,<sup>11</sup> the Commission is of the view that definitional standards should be established at levels below which there

would exist a disproportionate economic impact in the uniform application of its regulations.

In reaching the \$3 million total asset figure, the Commission examined, among other factors, the Congressional rationale for including a \$1 million asset test in Section 12(g) of the Securities Exchange Act when it amended that Act in 1964.<sup>12</sup> The legislative history of the 1964 amendments reveals that although the amount of assets would seem to be no more than a secondary criterion, "it may ultimately have relevance in defining a limit where burdens may be disproportionate to needs."<sup>13</sup> Thus, it seems appropriate that an inflationary adjustment to the \$1 million asset test is relevant in defining the extent to which the compliance burdens could be met by issuers involved. Additionally, the Commission believes that with the definitional standards established at such levels, the regulatory flexibility analyses required by the RFA would have maximum utility and greatest significance. One commentator, the Texas Independent Producers & Royalty Owners Association, suggested that a figure of \$4 million would more accurately reflect the inflation adjustment desired. As indicated earlier, the Commission noted in the proposing release that an inflationary adjustment to the Section 12(g) \$1 million total asset standard would result in a \$2,470,000 asset threshold in 1979. An update of this analysis through 1981 suggest that a more appropriate standard would be one which approximates \$3 million.

Several commentators suggested that the definitions under both the Securities Act and the Securities Exchange Act should include a revenue test in addition to the asset test proposed. The recommendations ranged from \$10 million to \$15 million in revenues. As noted above, the legislative history of the 1964 amendments to the Securities Exchange Act established an asset threshold as relevant and appropriate in defining the extent to which compliance burdens could be met by the issuers involved. Additionally, several commentators responding to the Commission's release regarding the advisability of classifying issuers for purposes of the Securities Exchange Act<sup>14</sup> expressed the view that an asset test represents a simple and functional criterion for measuring an issuer's size

in relation to the cost of complying with reporting obligations.<sup>15</sup> Moreover, the Commission does not anticipate that a revenue criterion would bestow any significant benefits upon small businesses in the context of the RFA, although additional criteria or modified asset standards which take into account the number of shareholders affected may have significance in the context of the Commission's proposed classification system.<sup>16</sup> In light of the foregoing, the Commission does not believe it is either necessary or desirable to adopt a revenue standard in the final definitions.

Accordingly, the Commission is adopting new Rule 157 under the Securities Act, which defines the terms "small business" and "small organization" for purposes of the RFA as any issuer, other than an investment company, whose total assets on the last day of its most recent fiscal year were \$3 million or less and that is engaged in small business financing; *i.e.*, any issuer that engages or proposes to engage in the offer and sale of its securities in an amount that does not exceed the dollar limitation prescribed by Section 3(b) of the Securities Act.

Additionally, the Commission is adopting new Rule 0-10 under the Securities Exchange Act,<sup>17</sup> which defines "small business" and small organization for purposes of the RFA to mean any "issuer" or any "person" whose total assets on the last day of its most recent fiscal year were \$3 million or less. The Commission may consider the advisability of similar adjustments in the future, if appropriate.

As indicated in the proposing release, the Commission has for some time been taking steps to facilitate the integration of the disclosure systems of both the Securities Act and the Securities Exchange Act so that investors and the marketplace are provided meaningful, nonduplicative information, while the costs of compliance are decreased.<sup>18</sup> The integration effort is based on the idea that, generally, there is no distinction between information that is material for

transaction, rather than solely on the size of the issuer, is appropriate. As an example, Section 3(b) of the Securities Act authorizes the Commission to exempt transactions from registration if it finds that registration is not necessary in the public interest because of the small dollar amount involved or the limited character of the public offering. The dollar ceiling under Section 3(b) has been raised on several occasions, most recently, from \$2 million to \$5 million pursuant to Section 301 of the Small Business Investment Incentive Act of 1980 (the "Incentive Act") [Pub. L. No. 96-477 (October 21, 1980)]. This Congressional action was intended to provide the Commission with increased flexibility in developing exemptions targeted to smaller issuers. Additionally, Congress adopted the transaction size approach when it enacted, in the Incentive Act, new Section 4(6) of the Securities Act.

the distribution of securities in transactions covered by the Securities Act on the one hand, and for periodic reporting under the Securities Exchange Act on the other hand, by companies whose securities are traded in the markets.

As a result of this effort, there will be instances in which amendments to rules, forms and schedules under the Securities Exchange Act that are a part of the integrated disclosure system will also affect disclosures under the Securities Act. The Commission does not intend to imply, however, that an issuer that is subject to the reporting requirements of the Securities Exchange Act may furnish less disclosure in a limited size offering than would normally be furnished to the marketplace under the Securities Exchange Act. Therefore, any impact analysis of rules under the Securities Exchange Act that are a part of the integrated disclosure system will normally be expected to satisfy the similar analysis under the Securities Act.

#### *Trust Indenture Act—Issuers Engaged in Small Business Financing*

In its consideration of the proposed definition of "small business" and "small organization" for purposes of the RFA to be applicable to rulemaking under the Trust Indenture Act of 1939, the Commission noted that the Trust Indenture Act definitions, exemptions, requirements, and procedures for qualification of indentures and trustees are closely related to the Securities Act. Consequently, the Commission believed that the considerations affecting small entities under the Trust Indenture Act should be determined in tandem with those under the Securities Act. The Commission therefore proposed to adopt, under the Trust Indenture Act, a rule defining "small business" and "small organization" in a manner which was identical to proposed Rule 157.

The commentators raised no objection to a Trust Indenture Act definition which corresponds to the Securities Act definition and in fact several commentators specifically endorsed the concept. However, the comments raised with respect to the asset test in proposed Rule 157 were made specifically applicable to the proposed definition under the Trust Indenture Act.

The Commission, based on the need for consistency between the Securities Act and Trust Indenture Act definitions, and for the reasons specified above, has determined to amend 17 CFR Part 260 by adopting § 260.0-7 which, for the purposes of the Trust Indenture Act, defines "small business" and "small

organization" to mean an issuer whose total assets on the last day of its most recent fiscal year were \$3 million or less and that is engaged or proposing to engage in small business financing. An issuer is considered to be engaged or proposing to be engaged in small business financing under this section if it is conducting or proposing to conduct an offering of securities which does not exceed the dollar limitation prescribed by § 260.4a-2.<sup>19</sup>

#### *The Securities Exchange Act—Brokers, Dealers and Other Regulated Entities*

As noted above, the Commission is also adopting definitions of the terms "small business" and "small organization" for purposes of the RFA with respect to certain entities in the securities industry whose activities are regulated by the Commission pursuant to the Securities Exchange Act. Those entities include brokers, dealers, clearing agencies, exchanges, bank municipal securities dealers, securities information processors and transfer agents. The definitions with respect to brokers and dealers have been revised in response to the views expressed by the commentators. The Commission did not receive any adverse comments on the other definitions<sup>20</sup> and is adopting the definitions as proposed.<sup>21</sup>

The definitions in Rule 0-10 as adopted incorporate the concept of affiliation and provide that a broker-dealer, clearing agency, exchange, bank municipal securities dealer, securities information processor or transfer agent is not a small business or small organization if that entity is affiliated with any person (other than a natural person) that is not a small business or small organization as defined in Rule 0-10. A person is said to be "affiliated" with another if that person controls, is controlled by, or is under common control with such other person. "Control" is defined as, among other things, the right to vote 25 percent or more of the voting securities of an entity

<sup>19</sup> 17 CFR 260-4a-2 provides:

"The provisions of the Trust Indenture Act of 1939 shall not apply to any security which has been or is to be issued under an indenture which limits the aggregate principal amount of securities at any time outstanding thereunder to \$5,000,000 or less, but this exemption shall not be applied within a period of thirty-six consecutive months to more than \$5,000,000 aggregate amount of securities of the same issuer."

<sup>20</sup> The only comment that the Commission received on these proposed definitions was from the Small Business Administration, which noted that the proposed definitions for regulated entities under the Securities Exchange Act appeared to be adequate to meet the requirements of the RFA.

<sup>21</sup> See paragraphs (d) through (h) of Rule 0-10, *infra*.

and the right to receive 25 percent or more of the net profits of such entity.

As indicated in the proposal release, the Commission believes that it is appropriate to take into account the structure of business organizations in the securities industry when defining the terms "small business" and "small organization." The Commission believes that an ownership or profit-sharing interest of 25 percent or more is an appropriate threshold for determining when the financial resources of affiliates of a securities firm or a securities service firm should be considered in determining the size of that firm for purposes of the RFA and Commission rulemaking. The Standard Oil Company of California objected to the 25 percent threshold because of its belief that equating "control" with a 25 percent interest in an entity would create an unnecessary and undesirable exception to generally accepted terminology.<sup>22</sup> The Commission notes, however, that the threshold as established in Rule 0-10 applies exclusively to the securities industry for limited purposes in the course of Commission rulemaking proceedings affecting only members of that industry and their affiliates.

As indicated above, the Commission is adopting revised definitions of "small business" and "small organization" with respect to brokers and dealers. Proposed Rule 0-10, as published for public comment, would have defined as small those brokers or dealers that are permitted to maintain a certain specified minimum level of net capital, had fewer than five employees at the end of the preceding calendar year, and are not associated with any entities that are not small businesses or small organizations under Rule 0-10. The commentators, however, generally opposed this definition and the use of net capital and number of employees as size standards, and contended that the threshold levels were set too low.<sup>23</sup>

In light of the comments received, the Commission has substantially revised the definitions for broker-dealers and has determined to adopt those definitions as revised. As adopted,

<sup>22</sup> That commentator suggested, among other things, that the threshold might be lowered to 20 percent.

<sup>23</sup> The Securities Industry Association proposed that the Commission measure firm size by reference to total capital (defined as net worth plus subordinated liabilities). The Small Business Administration suggested that the Commission choose a size standard from among the possible measures after consultation with the National Association of Securities Dealers, Inc. One broker-dealer suggested a size standard of 19 or fewer employees; another suggested a size standard of \$2 million in equity capital and fewer than 30 employees.

paragraph (c) of Rule 0-10 would define as a small business or a small organization, for purposes of Commission rulemaking, a broker or dealer that had total capital of less than \$500,000 on the date in the prior fiscal year as of which its audited financial statements were prepared pursuant to 17 CFR 240.17a-5(d) or, if not required to file such statements, a broker or dealer that had total capital of less than \$500,000 on the last business day of the preceding fiscal year (or in the time it has been in business, if shorter); and (2) is not affiliated with any person (other than a natural person) this is not a small business or small organization as defined in the Rule. "Total capital" for purposes of the rule consists of net worth plus subordinated liabilities, including those subordinated liabilities that do not qualify for purposes of determining a firm's net capital under Rule 15c3-1 (17 CFR 240.15c3-1).

Determination of the size of a firm under Rule 0-10, for most broker-dealers, would be based on the total capital that firm reported to the Commission on its annual audited financial statements as of a particular date in the prior fiscal year. Most broker-dealers are required to file audited financial statements with the Commission pursuant to Rule 17a-5(d) under the Securities Exchange Act (17 CFR 240.17a-5(d)). For those firms that are not required to file annual audited financial statements,<sup>24</sup> or that have been in existence for less than one year, size would be determined on the basis of the level of the firm's total capital on the last business day of the preceding fiscal year or, if shorter, during the life of firm.

The Commission believes that \$500,000 in total capital is an appropriate benchmark for determining whether a firm is small for purposes of the RFA.<sup>25</sup> All firms are generally aware of their total capital and information

<sup>24</sup> Rule 17a-5(d)(iii), for instance, specifically excludes certain brokers that are members of a national securities exchange from those provisions of the rule that require the filing of audited financial statements with the Commission. See 17 CFR 240.17a-5(d)(iii).

<sup>25</sup> Rule 0-10 as proposed for public comment would have primarily focused, through a particular provision of the Commission's regulation regarding broker-dealer minimum net capital requirements, on the business activities of broker-dealers. The commentators expressed concern that such a focus would have excluded, for instance, broker-dealers that carried customer accounts or cleared their own transactions and, under any other measure of size, would be considered "small" entities. In light of the Commission's determination to expand the scope of the definition to include such broker-dealers, the Commission, as discussed in text, *infra*, believes that total capital is a better economic proxy than net capital for measuring firm size outside of the context of a particular segment of the brokerage community.

concerning the distribution of brokers and dealers according to specified levels of total capital is readily available to the Commission. Total capital appears to be preferable to other possible size standards, such as gross revenues or net capital, because it appears to be less volatile in the face of short-term shifts in factors affecting economic profitability. Data compiled by the Commission's Directorate of Economic Policy Analysis from the reports filed pursuant to Rule 17a-5 by broker-dealers for 1979<sup>26</sup> indicates that approximately 4100 broker-dealers had total capital of less than \$500,000.<sup>27</sup> A substantial majority of broker-dealers that are registered with the Commission may qualify as "small" under Rule 0-10, including some firms that engage in underwriting and general brokerage.<sup>28</sup> The Commission does not believe that the RFA mandates establishing a definition of "small" within an industry by reference to the very largest firms in that industry. While there has been in recent years some concentration of firms, the securities industry has usually characterized itself as a competitive industry with a substantial number of national and regional firms competing with one another in various lines of business. The Commission also believes that the definition adopted with regard to broker-dealers is appropriate, since it may serve as a basis for the possible "tiering" of regulations applicable to those entities.<sup>29</sup>

Although the Commission is adopting definitions with regard to the above mentioned entities, the Commission

<sup>26</sup> See generally, Securities and Exchange Commission, staff Report on the Securities Industry in 1979 (1980).

<sup>27</sup> As proposed for comment, Rule 0-10 would have restricted the class of broker-dealers potentially qualifying as small to certain broker-dealers that are permitted to maintain a certain level of minimum net capital pursuant to Rule 15c3-1(a)(2) or -1(a)(3), 17 CFR 240.15c3-1(a)(2)-(a)(3). The Commission estimates that approximately 1,850 broker-dealers maintain minimum net capital pursuant to those provisions.

<sup>28</sup> The approximately 925 firms that would appear not to qualify as "small" accounted for approximately 91 percent of the underwriting profits and 96 percent of the securities commissions earned by broker-dealers in 1979 as reported on the Rule 17a-5 reports for that year.

<sup>29</sup> The SIA recommended that the Commission define as small those broker-dealers having total capital of less than \$5 million, thereby defining as small all but approximately 140 SIA members or 200 registered broker-dealers. While that standard might in a few instances be appropriate, the Commission believes that the definition adopted today will generally provide a better basis for tiering regulations. The "tiering" of regulations will, of course, be considered in the context of each rulemaking proceeding subject to the RFA, at which time the Commission may consider whether alternative definitions of a "small" broker-dealer are appropriate.

welcomes future comment from interested persons and the public concerning the operation and appropriateness of those definitions. The Commission, in consultation with the Small Business Administration, will consider any changes to such definitions as experience dictates.<sup>30</sup>

#### Public Utility Holding Companies

The Commission has concluded that it is desirable to adopt a special definition of the terms "small business" and "small organization" for purposes of the RFA to apply to rulemaking under the Public Utility Holding Company Act. In this connection, the Commission does not believe that the Small Business Act and regulations promulgated by the SBA provide size standards that are appropriate for public utility holding companies.<sup>31</sup> Moreover, the Commission believes that the size standards currently in use in connection with federal programs to assist small manufacturing or service enterprises are not appropriate for measuring the impact of rules on small entities that are in "holding company" systems under the Holding Company Act.

Under the Holding Company Act, the Commission exercises comprehensive authority over the issuance of securities or the acquisition of securities or utility assets by registered holding companies and their subsidiaries, intrasystem transactions, and accounting requirements, among other things. A "holding company" is defined under the Holding Company Act as any company which owns 10 percent or more of the voting securities of a public utility company, which is defined as an electric or gas utility company.<sup>32</sup> While the Holding Company Act also provides

<sup>30</sup> The Small Business Administration suggested that the Commission periodically evaluate the definitions being adopted today.

<sup>31</sup> The SBA's small business size standards, contained in 13 CFR Part 121 (1980), do not include a standard which is appropriate or practicable to apply in the context of rulemaking under the Holding Company Act. Only one subsection thereof, 13 CFR 121.33-10(d)(11), deals expressly with electric or gas utility companies. That subsection classifies as "small," for purposes of SBA loans, a concern primarily engaged in the generation, transmission and/or distribution of electric energy for sale whose total output (including that of its affiliates) for the preceding fiscal year did not exceed 4 million megawatt hours. The SBA has proposed for comment amendments to its size standard regulations. Small Business Size Standards; Revision to Method of Establishing Size Standards and Definitions of Small Business, 45 FR 15442 (March 10, 1980). The proposed standards are all stated in terms of number of employees. *Id.* at 15443. Although electric and gas services are listed in the heading of Major Group 49 therein, there are no proposed size standards for electric or gas utilities. *Id.* at 15449.

<sup>32</sup> Sections 2(a)(7)(A) and 2(a)(5).

definitions of "electric utility company" and "gas utility company," the basic regulated unit for purposes of the Holding Company Act is the "holding company system," which is defined to include the holding company and each subsidiary company which is a member of that system,<sup>33</sup> whether it is a utility subsidiary or a non-utility subsidiary.

The Commission further believes that it is appropriate to assess the burdens of regulation under the Holding Company Act for purposes of the RFA by reference to the size of the holding company system as a whole, rather than by reference to its member companies, for three reasons. First, the holding company system is a single control group. Under the standards of the Holding Company Act, subsidiaries of the registered holding companies are wholly-owned or are specialized joint ventures with co-owners of comparable size and character. They would not, within the meaning of Section 3 of the Small Business Act, be considered "independently owned." Second, while most holding companies own more than one public utility subsidiary, the Holding Company Act requires that all such subsidiaries constitute but a single integrated public utility system.<sup>34</sup> And third, the regulatory provisions of the Holding Company Act generally apply to the holding company and to each of its subsidiaries; that is, to the entire holding company system. Accordingly, the rule establishes a definition of the terms "small business" and "small organization" for purposes of the RFA with respect to "holding company systems."

Rule 110, 17 CFR 250.110, defines the terms "small business" or "small organization" as a holding company system whose consolidated revenues from electric or gas utility operations did not exceed \$1,000,000 in its last fiscal year. The Commission believes that it is appropriate to measure the size of a holding company system by reference to its consolidated gross utility revenues, a standard familiar to the industry and for which data are currently available. In establishing this size standard, the Commission has considered, among other things, the number of firms in the industry and the purposes of the Holding Company Act that form the predicate for regulation by the Commission. Holding companies, as such, do not constitute a relevant industry group. The relevant industry is the electric and gas utility industry. Upon the basis of available data, as of 1979, the latest available year, the Commission estimates that

there are approximately 130 investor-owned electric utility systems and 500 investor-owned gas utility systems, of which it is believed approximately 14 and 180, respectively, have utility revenues below \$1,000,000.<sup>35</sup>

There are currently nine registered electric utility holding company systems and three registered gas utility holding company systems that include 53 wholly or partly owned electric utility subsidiaries and 19 gas distribution and transmission subsidiaries. Under the size standard adopted, none of the currently registered holding company systems is a small entity.

There were no substantive comments received regarding the proposed definitions as initially published.

#### Investment Companies and Investment Advisers

In view of the comments received and the reasons given below, the Commission has revised the definitions of "small business" and "small organization" that were proposed with respect to investment companies and investment advisers and is adopting the revised definitions as Rule 0-10, 17 CFR 270.0-10, and Rule 0-7, 17 CFR 275.0-7.

Rule 0-10, 17 CFR 270.0-10, classifies as small any investment company with net assets of \$50 million or less as of the end of its most recent fiscal year. The Commission received two letters commenting specifically on this size standard. One urged that \$50 million was an appropriate cut-off point.<sup>36</sup> The SBA, being of the impression that only 14 percent, rather than 62.4 percent, of the investment companies in the Commission's statistical sample have assets of \$50 million or less, suggested raising the figure to \$100 million so that a greater proportion of investment companies might be classified as small.<sup>37</sup> Both commentators suggested that any investment company that primarily invests in small businesses be deemed small even though its net assets exceed the cut-off point that may be adopted.

The Commission believes that had the SBA realized that 62.4 percent of the investment companies would be deemed small under the Commission's size standard it might not have suggested

<sup>33</sup> Source: "Electric Utility Statistics," Public Power, Jan-Feb. 1981, p. D-3, Federal Energy Regulatory Commission Form 1's for Class C and D electric utility companies (1979); Brown's Directory of American and International Gas Companies (93d ed. 1979); Statistics supplied by the American Gas Association.

<sup>37</sup> Small Business Administration letter dated May 27, 1981 ("SBA").

raising the cut-off point to \$100 million. Moreover, the Commission continues to believe that, since investment companies with high expense ratios would generally be more adversely affected by regulatory costs than those with lower expense ratios, they are the appropriate subject of relief for purposes of the RFA. Since its statistical study shows that investment companies with net assets from \$6 million to \$47.2 million had expense ratios exceeding the mean (average) adjusted expense ratio plus one standard deviation (and all the companies with net assets of over \$47.2 million had expense ratios falling below this boundary), the Commission is adopting \$50 million as the cut-off point.

Having thus identified the small entities in the investment company industry, the Commission is not persuaded that it must, in addition, provide special treatment for investment companies which, although not small, invest in small businesses on the assumption that the benefit of reduced regulatory cost on such investment companies would filter down to its portfolio companies. These portfolio companies are a step removed from the purpose of the Commission's size standard which is to distinguish those investment companies that, due to their size, bear a disproportionate burden of the costs of complying with regulations.

Paragraph (a)(1) of Rule 0-7, 17 CFR 275.0-7(a)(1), classifies as small any investment adviser that manages assets with a total value of \$50 million or less, in discretionary or non-discretionary accounts, as of the end of its most recent fiscal year and does not render other advisory services. The Commission received three letters commenting specifically on this size standard. One recommended \$50 million as a realistic cut-off point, if indexed for inflation by tying it to the GNP deflator. The Commission believes that this is not necessary because \$50 million is only an estimate and it can be changed in the future if necessary.

The SBA suggested that the Commission raise the cut-off point to \$100 million to increase the number of investment advisers that will be eligible for regulatory relief. Another commentator also suggested raising the cut-off point to \$100 million, but would add, as alternatives, "maintains 25 or less accounts or employs 5 or less persons."<sup>38</sup> The Commission has no information about the specific number of employees of investment advisers or how many investment advisers employ 5

<sup>38</sup> Myerson, Den Berg and Co., letter dated May 5, 1981.

<sup>32</sup> Section 2(a)(9).

<sup>34</sup> Section 11(b)(1).

or less persons. Aside from the difficulty of defining "employee" (whether to include half-time, full-time, temporary, permanent, partners, etc.), an attempt to solicit this information from investment advisers would impose unnecessary burdens on them to provide information, contrary to the spirit of the Paperwork Reduction Act.<sup>39</sup> Although it is possible to gather from Form ADV the number of accounts of investment advisers,<sup>40</sup> the number of accounts will not necessarily identify the small investment advisers that only manage assets because of the varying size of the accounts. Thus, an investment adviser with just one account—a \$1 billion money market fund—would not be small compared to an investment adviser with fifty \$1 million accounts. Therefore, the Commission is not adopting these alternative size standards.

As to raising the cut-off point for investment advisers that only manage assets, the Commission notes that it proposed \$50 million as the cut-off point because of the similarities, with respect to the management of assets, between the investment company and the investment advisory businesses. Therefore, having adopted \$50 million as the cut-off point for investment companies, the Commission also adopts it for investment advisers that only manage assets. The Commission is not persuaded that the cut-off point should be raised simply to increase the number of investment advisers that will be eligible for relief. To adopt such an approach would be to depart from the purpose of adopting a size standard, which is to identify the small entities among a particular type of entities so that the Commission may determine whether a particular rulemaking has "a significant economic impact on a substantial number of small entities."<sup>41</sup>

Paragraph (a)(2) of Rule 0-7, 17 CFR 275.0-7(a)(2), classifies as small any investment adviser that solely, or in addition to managing assets of \$50

million or less, renders other advisory services and the assets related to its advisory business do not exceed in value \$50,000 as of the end of its most recent fiscal year. As originally proposed, the size standard for this type of adviser was that its business-related assets, as shown in the balance sheet most recently filed with the Commission, did not exceed in value 50 percent of the average business-related assets for this type of adviser. As stated in the proposal, the Commission expected to determine such average assets from the balance sheets in its files and to express the size standard in dollars in the final rule. This size standard encountered several objections. One commentator suggested that "\$50 million or less" be changed to "\$100 million or less, 25 or less accounts or employs 5 or less persons." For the reasons stated in the preceding two paragraphs, the Commission has not adopted this suggestion.

Another commentator suggested that the Commission use the 500-employee size standard proposed by the SBA for miscellaneous publishers.<sup>42</sup> The Commission does not adopt this suggestion because some investment advisers in this category are not publishers at all<sup>43</sup> and, to the extent that some of them issue publications on a subscription basis, the standard would probably embrace all of them for it is unlikely that any of them has more than 500 employees. The standard, therefore, would not identify those that are small among this type of advisers. For this reason, the standard would not serve the purposes of the RFA. This reasoning also supports the Commission's not following suggestions that there should be a separate standard classifying as

small all investment advisers who solely or mainly publish newsletters.<sup>44</sup>

Finally, one commentator pointed out potential problems with using the "average" business-related assets as a point of reference for the size standard in the absence of data showing the distribution of this type of investment advisers.<sup>45</sup> This comment is well-taken. The size standard in paragraph (a)(2) of Rule 0-7, 17 CFR 275.0-7(a)(2), uses the median business-related assets, not the average business-related assets, as the point of reference. In a random sample of 100 investment advisers out of about 2,300 investment advisers that solely, or in addition to managing assets of \$50 million or less, render other advisory services<sup>46</sup> the Commission found that the median value of their business-related assets was approximately \$50,000. The information about the business-related assets of those advisers in the sample was taken from such advisers' latest balance sheets in the Commission's files.<sup>47</sup> Using the median assets of investment advisers in the sample (\$50,000), instead of 50 percent of such median assets (\$25,000), as the cut-off point would classify as small 55 percent of investment advisers in the sample—a segment which compares with 62.4 percent of investment companies in the Commission's earlier sample that are classified as small under the size standard for investment companies.

#### Text of Amendments

### PART 230—GENERAL RULES AND REGULATIONS, SECURITIES ACT OF 1933

Part 230 of Chapter II of Title 17 of the Code of Federal Regulations is amended by adding § 230.157 to read as follows:

#### § 230.157 Small entities for purposes of the Regulatory Flexibility Act.

For purposes of Commission rulemaking in accordance with the provisions of Chapter Six of the Administrative Procedure Act (5 U.S.C. 601 et seq.), and unless otherwise

<sup>39</sup> Under the Paperwork Reduction Act of 1980, effective on April 1, 1981, the Commission must obtain approval from the Office of Management and Budget ("OMB") for every questionnaire calling for answers to identical questions posed to ten or more persons.

<sup>40</sup> Items 15(ii)(a) and 16(ii)(a), Part I, Form ADV, require an investment adviser to state the total number of accounts under discretionary management and of accounts under management or supervision, respectively, as of the end of the adviser's last fiscal year.

<sup>41</sup> Increasing the number of entities within the class deemed small might even be counterproductive in applying this statutory standard in that the bigger the class, the greater the number of entities within it that must be adversely affected by a particular rulemaking before it can be said that the rulemaking affects a "substantial" number of the class.

<sup>42</sup> At the time of the proposal the Commission rejected a size standard based on the number of subscribers because it had no information about the number of these subscribers. The Commission still does not have this information, but it is proposing to amend item 17 of Part I of Form ADV to require an applicant that issues periodic publications relating to securities on a subscription basis to state the number of subscribers thereto as of the end of the applicant's last fiscal year. If this proposed amendment is adopted, the Commission, with available information about the number of subscribers, might reconsider amending the size standard applicable to publishers of market letters.

<sup>43</sup> This category includes not only those advisers that issue periodic publications relating to securities on a subscription basis, but also those that furnish investment advice through consultations (without furnishing investment supervisory services or otherwise managing investment advisory accounts), prepare or issue special reports or analyses relating to securities, or prepare or issue any charts, graphs, formulas, or other devices which clients may use to evaluate securities.

<sup>44</sup> SBA; Newsletter Association of America, letter dated May 13, 1981.

<sup>45</sup> NAIC Investor Advisory Service, letter dated May 14, 1981.

<sup>46</sup> As used in this proposed definition, "other advisory services" means services referred to in item 1(c), (d), (e), (f), and (h), Part II, of Form ADV, 17 CFR 279.0-1.

<sup>47</sup> The Commission is proposing to delete the unaudited balance sheet requirement in item 17, Part I, Form ADV. This deletion, if adopted, should not affect the Commission's application of the size standard in view of the data already available or the monitoring of its continued propriety in view of the balance sheet data that the Commission obtains in its routine adviser inspections.

defined for purposes of a particular rulemaking proceeding, the term "small business" or "small organization" shall—

(a) When used with reference to an issuer, other than an investment company, for purposes of the Securities Act of 1933, mean an issuer whose total assets on the last day of its most recent fiscal year were \$3,000,000 or less and that is engaged or proposing to engage in small business financing. An issuer is considered to be engaged or proposing to engage in small business financing under this section if it is conducting or proposes to conduct an offering of securities which does not exceed the dollar limitation prescribed by section 3(b) of the Securities Act.

(b) When used with reference to an investment company that is an issuer for purposes of the Securities Act of 1933, mean an investment company with net assets of \$50 million or less as of the end of its most recent fiscal year.

#### **PART 240—GENERAL RULES AND REGULATIONS, SECURITIES EXCHANGE ACT OF 1934**

Part 240 of Chapter II of Title 17 of the Code of Federal Regulations is amended by adding § 240.0-10 to read as follows:

##### **§ 240.0-10 Small entities for purposes of the Regulatory Flexibility Act.**

For purposes of Commission rulemaking in accordance with the provisions of Chapter Six of the Administrative Procedure Act (5 U.S.C. 601 et seq.), and unless otherwise defined for purposes of a particular rulemaking proceeding, the term "small business" or "small organization" shall—

(a) When used with reference to an "issuer" or a "person," other than an investment company, under sections 12, 13, 14, 15(d) or 16(b) of the Securities Exchange Act of 1934, mean an "issuer" or "person" that, on the last day of its most recent fiscal year, had total assets of \$3,000,000 or less;

(b) When used with reference to an "issuer" or "person" that is an investment company, mean an investment company with net assets of \$50 million or less as of the end of its most recent fiscal year;

(c) When used with reference to a broker or dealer, mean a broker or dealer that:

(1) Had total capital (net worth plus subordinated liabilities) of less than \$500,000 on the date in the prior fiscal year as of which its audited financial statements were prepared pursuant to § 240.17a-5(d) or, if not required to file such statements, a broker or dealer that had total capital (net worth plus

subordinated liabilities) of less than \$500,000 on the last business day of the preceding fiscal year (or in the time that it has been in business, if shorter); and

(2) Is not affiliated with any person (other than a natural person) that is not a small business or small organization as defined in this section;

(d) When used with reference to a clearing agency, mean a clearing agency that:

(1) Compared, cleared and settled less than \$500 million in securities transactions during the preceding fiscal year (or in the time that it has been in business, if shorter);

(2) Had less than \$200 million of funds and securities in its custody or control at all times during the preceding fiscal year (or in the time that it has been in business, if shorter); and

(3) Is not affiliated with any person (other than a natural person) that is not a small business or small organization as defined in this section;

(e) When used with reference to an exchange, mean any exchange that has been exempted from the reporting requirements of § 240.11Aa3-1;

(f) When used with reference to a municipal securities dealer that is a bank (including any separately identifiable department or division of a bank), mean any such municipal securities dealer that:

(1) Had, or is a department of a bank that had, total assets of less than \$10 million at all times during the preceding fiscal year (or in the time that it has been in business, if shorter);

(2) Had an average monthly volume of municipal securities transactions in the preceding fiscal year (or in the time it has been registered, if shorter) of less than \$100,000; and

(3) Is not affiliated with any person (other than a natural person) that is not a small business or small organization as defined in this section;

(g) When used with reference to a securities information processor, mean a securities information processor that:

(1) Had gross revenues of less than \$10 million during the preceding fiscal year (or in the time it has been in business, if shorter);

(2) Serviced less than 100 interrogation devices or moving tickers as those terms are defined in § 240.11Aa-3-1 at all times during the preceding fiscal year (or in the time that it has been in business, if shorter); and

(3) Is not affiliated with any person (other than a natural person) that is not a small business or small organization as defined in this section; and

(h) When used with reference to a transfer agent, mean a transfer agent that:

(1) Received less than 500 items for transfer and less than 500 items for processing during the preceding six months (or in the time that it has been in business, if shorter);

(2) Maintained master shareholder files that in the aggregate contained less than 1,000 shareholder accounts or was the named transfer agent for less than 1,000 shareholder accounts at all times during the preceding fiscal year (or in the time that it has been in business, if shorter); and

(3) Is not affiliated with any person (other than a natural person) that is not a small business or small organization under this section.

(i) For purposes of paragraphs (c) through (h) of this section, a person is affiliated with another person if that person controls, is controlled by, or is under common control with such other person; a person shall be deemed to control another person if that person has the right to vote 25% or more of the voting securities of such other person or is entitled to receive 25% or more of the net profits of such other person or is otherwise able to direct or cause the direction of the management or policies of such other person.

#### **PART 250—GENERAL RULES AND REGULATIONS, PUBLIC UTILITY HOLDING COMPANY ACT OF 1935**

Part 250 of Chapter II of Title 17 of the Code of Federal Regulations is amended by adding § 250.110 to read as follows:

##### **§ 250.110 Small entities for purposes of the Regulatory Flexibility Act.**

For purposes of Commission rulemaking in accordance with the provisions of Chapter Six of the Administrative Procedure Act (5 U.S.C. 601 et seq.), and unless otherwise defined for purposes of a particular rulemaking proceeding, the terms "small business" and "small organization," for purposes of the Public Utility Holding Company Act of 1935, shall mean a holding company system whose gross consolidated revenues from sales of electric energy or of natural or manufactured gas distributed at retail for its previous fiscal year did not exceed \$1,000,000. There may be excluded from such gross revenues:

(a) Sales of electric energy or natural or manufactured gas to tenants or employees of any operating subsidiary company of such holding company for their own use and not for resale; and

(b) Sales of gas to industrial consumers or in enclosed portable containers.

### PART 260—GENERAL RULES AND REGULATIONS, TRUST INDENTURE ACT OF 1939

Part 260 of Chapter II of Title 17 of the Code of Federal Regulations is amended by adding § 260.0-7 to read as follows:

#### § 260.0-7 Small entities for purposes of the Regulatory Flexibility Act.

For purposes of Commission rulemaking in accordance with the provisions of Chapter Six of the Administrative Procedure Act (5 U.S.C. 601 et seq.), and unless otherwise defined for purposes of a particular rulemaking proceeding, the term "small business" or "small organization," for purposes of the Trust Indenture Act of 1939 shall mean an issuer whose total assets on the last day of its most recent fiscal year were \$3 million or less that is engaged or proposing to engage in small business financing. An issuer is considered to be engaged or proposing to be engaged in small business financing under this section if it is conducting or proposing to conduct an offering of securities which does not exceed the dollar limitation prescribed by § 260.4a-2.

### PART 270—RULES AND REGULATIONS, INVESTMENT COMPANY ACT OF 1940

Part 270 of Chapter II of Title 17 of the Code of Federal Regulations is amended by adding § 270.0-10 to read as follows:

#### § 270.0-10 Small entities for purposes of the Regulatory Flexibility Act.

For purposes of Commission rulemaking in accordance with the provisions of Chapter Six of the Administrative Procedure Act (5 U.S.C. 601 et seq.), and unless otherwise defined for purposes of a particular rulemaking proceeding, the term "small business" or "small organization," for purposes of the Investment Company Act of 1940 shall mean an investment company with net assets of \$50 million or less as of the end of its most recent fiscal year.

### PART 275—RULES AND REGULATIONS, INVESTMENT ADVISERS ACT OF 1940

Part 275 of Chapter II of Title 17 of the Code of Federal Regulations is amended by adding § 275.0-7 to read as follows:

#### § 275.0-7 Small entities for purposes of the Regulatory Flexibility Act.

(a) For purposes of Commission rulemaking in accordance with the provisions of Chapter Six of the Administrative Procedure Act (5 U.S.C. 601 et seq.), and unless otherwise defined for purposes of a particular

rulemaking proceeding, the term "small business" or "small organization" for purposes of the Investment Advisers Act of 1940 shall mean an investment adviser that:

(1) Manages assets with a total value of \$50 million or less, in discretionary or non-discretionary accounts, as of the end of its most recent fiscal year and does not render other advisory services; or

(2) Solely, or in addition to managing assets of \$50 million or less, renders other advisory services, and the assets related to its advisory business do not exceed in value \$50,000 as of the end of its most recent fiscal year.

(b) As used in this rule, the term "other advisory services" means the services referred to in Form ADV, Part II, items 1(c) through (f) and (h). (17 CFR 279.0-1).

#### Statutory Authority

The Commission hereby adopts Rules 157, 0-10, 110, 9-7, 0-9 and 0-7, 17 CFR 230.157, 240.0-10, 250.110, 260.0-7, 270.0-10 and 275.0-7 respectively, pursuant to chapter 6 of title 5 of the United States Code (and particularly section 601 thereof (5 U.S.C. 601)) and pursuant to the Securities Act of 1933 (15 U.S.C. 77a et seq. and particularly section 19 thereof (15 U.S.C. 77s)), the Securities Exchange Act of 1934 (15 U.S.C. 78a et seq. and particularly section 23 thereof (15 U.S.C. 78w)), the Public Utility Holding Company Act of 1935 (15 U.S.C. 79a et seq. and particularly section 20 thereof (15 U.S.C. 79t)), the Trust Indenture Act of 1939 (15 U.S.C. 77aaa et seq. and particularly section 319 thereof (15 U.S.C. 77sss)), the Investment Company Act of 1940 (15 U.S.C. 80a-1 et seq. and particularly section 38 thereof (15 U.S.C. 80a-37)), and the Investment Advisers Act of 1940 (15 U.S.C. 80b-1 et seq. and particularly section 211 thereof (15 U.S.C. 80b-11)).

By the Commission,  
George A. Fitzsimmons,  
Secretary.

January 28, 1982.  
[FR Doc. 82-2905 Filed 2-3-82; 8:45 am]  
BILLING CODE 8010-01-M

### 17 CFR Part 250

[Release No. 35-22369]

### Technical Amendments to Rules 70, 72 and 100

AGENCY: Securities and Exchange Commission.

ACTION: Technical amendments to rules.

**SUMMARY:** The Commission announces the adoption of technical amendments to Rules 70, 72 and 100 promulgated under the Public Utility Holding Company Act of 1935 ("1935 Act"). These amendments identify the correct forms for filing reports pursuant to section 17(a) of the 1935 Act and eliminate certain duplicate text and an obsolete reference.

**DATE:** February 4, 1982.

**FOR FURTHER INFORMATION CONTACT:** James E. Lurie, Special Counsel, Division of Corporate Regulation, Securities and Exchange Commission, Washington, D.C. 20549 (202) 523-5683.

**SUPPLEMENTARY INFORMATION:** Sections 17(a) and (b) of the 1935 Act concern the filing of statements of beneficial ownership and the liability for short-swing profits by certain insiders involving any security of a registered holding company or subsidiary thereof. These provisions parallel the reporting and liability provisions of sections 16(a) and (b) of the Securities Exchange Act of 1934 ("Exchange Act"). On January 8, 1981, the Commission amended Rule 72(b) under the 1935 Act so that it applied the rules, including exemptive rules, promulgated under sections 16(a) and (b) of the Exchange Act to transactions involving any security of a registered holding company or subsidiary thereof under sections 17(a) and (b) of the 1935 Act.<sup>1</sup> Duplication of filing requirements had previously been avoided by specifying Forms 3 and 4<sup>2</sup> prescribed under section 16(a) of the Exchange Act as filings also under the 1935 Act.<sup>3</sup> On March 20, 1981, these forms were deleted from the list of 1935 Act forms (previously at 17 CFR 259.271(a) and (b)), since the amendment to rule 72(b) made the dual designation superfluous.<sup>3</sup> The fact that other rules still referred to them was overlooked, a technical oversight corrected here.

The technical amendment revises Rule 72(a) to make clear that only the Exchange Act filing is contemplated. Parallel revisions to reflect this change are made to footnote 5, a note to the subheading preceding rule 70, and to the text of rule 70(b)(4), each of which refers to the filing requirements under section 17(a) of the 1935 Act.

The Commission is also deleting as obsolete footnote 6 to the 1935 Act rules. The footnote, a note accompanying rule 70(c)(5), refers to temporary provisions concerning exemptions in rule 201(b).

**Subject:** RE: Broker-dealer numbers  
**Date:** Monday, February 24, 2014 2:14:00 PM

---

I am looking for the number of broker-dealers registered with the Commission as of 12/31/2013 (the comparable to the 4,612 that were registered as of 12/31/2012).

For the revenue numbers, it was for Regulatory Flexibility Act requirements, so the suggested releases from the Commission should be helpful.

Thanks for your help,  
Allan

Mr. Beckmann,

As you can see from the below back and forth with Daniel, he asked for different broker-dealer statistics at different times.

I'm not sure what the release you are working on is about.

Are you only looking for the number of broker-dealers registered with the Commission as of 12/31/2013?

On the revenue numbers, broker-dealers' FOCUS reports and the data contained therein is confidential.

If you are looking for information to address the Regulatory Flexibility Act requirements, Dan and I spoke of this last March. At that time, I suggested that he look at and possibly cite to one of the Commission's releases (see attachment). Since that time the Commission has published other releases that contain more up-to-date information. For instance, you could review this one - <http://www.sec.gov/rules/final/2013/34-70073.pdf>.

Bonnie.

**Subject:** RE: Broker-dealer numbers

Hi Bonnie,

You communicated with my colleague Dan Puskin last year regarding some broker-dealer

registration statistics. Dan has left the office, and I've taken over some of his responsibilities. Do you have updated data for 2013 (or more recent) of the number of broker-dealers registered with the SEC? Additionally, do you have data on the broker-dealer revenue? Would it be possible to determine the number of broker-dealers with less than \$7 million in annual revenue?

Thanks,  
Allan Beckmann

Hi Bonnie,

Sorry to bother you--I realize I never asked for the new filers in 2012. You told me there were 4,612 BDs registered in 2012. How many BDs initiated registration and withdrew registration last year?

Hope all is well,  
Dan

**Subject:** RE: Broker-dealer numbers

Dan,

As of 3/17/2013 927 broker-dealers had selected "Y" for "IAD" – or Item "S" in response to Question 12 on Form BD.

I hope this is helpful.

**Subject:** RE: Broker-dealer numbers

Hi Dan!

I believe the answer to both of these questions is no. First, what is the definition of "discount broker?" A lot of people use that term, but I don't believe there is one definition. Also, I don't believe it is a question the Commission asks on any of its forms. I also don't believe there is a way to easily isolate those BDs that might be associated with insurance companies. While the SEC probably receives information in this regard, it would not be in a format that would be searchable.

Sorry!

Bonnie

**To:** Puskin, Dan - EBSA  
**Cc:** Beckmann, Allan - EBSA  
**Subject:** RE: Broker-dealer numbers

Hi Dan!

The study you point to was issued by the Commission on January 22, 2011. On page 8 of this study, the Commission states, "Currently, the Commission oversees approximately 5,100 broker-dealers<sup>11</sup>..."

The corresponding footnote reads, "Unless otherwise specified, the statistics in Section II.A.2 are based on data derived from broker-dealers' responses to questions on the Uniform Application for Broker-Dealer Registration ("Form BD") reported through the Central Registration Depository ("CRD") as of September 30, 2010...."

I would highlight here that the text and footnote indicate that the number of broker-dealers is both "approximate," and based on data collected by the Commission "as of September 30, 2010."

In October, I provided you with data on the number of broker-dealers registered with the Commission as of the calendar years ending December, 2010 and December, 2011.

I hope this addresses your concerns.

**Subject:** RE: Broker-dealer numbers

Dear Dan,

Perhaps I am mistaken, but I didn't read Bonnie's message to mean that the BD number is overstated; I read it to mean that to get the data you were looking for you should reduce the number of Forms BD and Forms BDW filed to account for duplicate filings. I believe you can rely on her 4,813 number as the correct number of total number of BDs.

I'm not sure what the 5,100 number is based on. Would it be OK to wait until Bonnie returns on Monday and she can ask the person who gave her the other statistics? Perhaps that person knows.

Thanks,

Margaret

**To:** Puskin, Dan - EBSA  
**Subject:** Broker-dealer numbers

Hi Daniel!

I guess we don't keep track of the number of new BDs registered and the number of BDs that exited – instead we keep track of the number of Forms BD (to initiate registration) and BDW (to withdraw from registration) filed.

These numbers are as follows:

Forms BD filed in the calendar year ending 12/31/2009 - 337

Forms BD filed in the calendar year ending 12/31/2010 - 285

Forms BD filed in the calendar year ending 12/31/2011 - 216

Forms BDW filed in the calendar year ending 12/31/2009 - 285

Forms BDW filed in the calendar year ending 12/31/2010 - 549

Forms BDW filed in the calendar year ending 12/31/2011 – 378

These would include possible duplicate filings (deficient Forms BDW where the firm was required to re-file the Form, and BD apps that were never accepted or were withdrawn before they started business). The expert here who deals with these filings suggests reducing the number of Forms BD by 5% and the number of Forms BDW by 10% to account for these duplicates.

As you are an economist, I am providing the raw numbers and the suggested reductions to allow you the ability to either retain the raw number or reduce the raw numbers, as suggested.

In addition, the total number of broker-dealers and the number of small broker-dealers registered with the Commission as of 12/31/2009, 12/31/2010, and 12/31/2011 were 5,257 and 927, 5,061 and 841, and 4,813 and 808, respectively.

I hope this is helpful to you.

Have a terrific weekend!

Hi Bonnie,

You communicated with my colleague Dan Puskin last year regarding some broker-dealer registration statistics. Dan has left the office, and I've taken over some of his responsibilities. Do you have updated data for 2013 (or more recent) of the number of broker-dealers registered with the SEC? Additionally, do you have data on the broker-dealer revenue? Would it be possible to determine the number of broker-dealers with less than \$7 million in annual revenue?

Thanks,  
Allan Beckmann

#### Financial Literacy Seminar Series

---

Please join us for a Financial Literacy Seminar Series (FLSS) session on **Thursday, October 24** presented by **Julie Agnew** of the College of William and Mary. She will discuss her upcoming paper, "**Judging the Quality of Financial Advice: The Good, the Bad, and the Adviser.**" You can read the abstract by clicking [here](#).

The FLSS will be hosted at the George Washington School of Business, Duquès Hall, Room 651, from **3:00 to 4:30pm**. A reception will follow from 4:30 to 5:30pm in the Dean's Reception Area on the 6th floor.

**Please note the seminar will now begin at 3pm.**

[PLEASE CLICK HERE TO RSVP.](#)

SAVE THE DATES for our upcoming seminars:

- November 7, James Choi, Yale University
- November 21, William Skimmyhorn, United States Military Academy
- December 5, Richard Burkhauser, Cornell University

The FLSS is a joint initiative of the Federal Reserve Board (FRB) and the Global Financial Literacy Excellence Center (GFLEC) at the George Washington School of Business (GWSB). In the fall term, the seminars convene every other Thursday at GWSB. Additional information about the seminar series and directions to GWSB are provided on our website at <http://business.gwu.edu/flss/>. Please contact us at [gfilec@gwu.edu](mailto:gfilec@gwu.edu) if you have questions about the FLSS.

We look forward to seeing you on Thursday, October 24.

The Steering Committee,  
Annamaria Lusardi, GWSB

Hey Matt,

I have a question for you about data on single issue bond trading. Is there a good time this afternoon for me to call you?

Thanks,  
Keith

## Trading Is Hazardous to Your Wealth: The Common Stock Investment Performance of Individual Investors

BRAD M. BARBER and TERRANCE ODEAN\*

### ABSTRACT

Individual investors who hold common stocks directly pay a tremendous performance penalty for active trading. Of 66,465 households with accounts at a large discount broker during 1991 to 1996, those that trade most earn an annual return of 11.4 percent, while the market returns 17.9 percent. The average household earns an annual return of 16.4 percent, tilts its common stock investment toward high-beta, small, value stocks, and turns over 75 percent of its portfolio annually. Overconfidence can explain high trading levels and the resulting poor performance of individual investors. Our central message is that trading is hazardous to your wealth.

*The investor's chief problem—and even his worst  
enemy—is likely to be himself.*  
Benjamin Graham

In 1996, approximately 47 percent of equity investments in the United States were held directly by households, 23 percent by pension funds, and 14 percent by mutual funds (*Securities Industry Fact Book*, 1997). Financial economists have extensively analyzed the return performance of equities managed by mutual funds. There is also a fair amount of research on the performance of equities managed by pension funds. Unfortunately, there is little research on the return performance of equities held directly by households, despite their large ownership of equities.

\* Graduate School of Management, University of California, Davis. We are grateful to the discount brokerage firm that provided us with the data for this study. We appreciate the comments of Christopher Barry, George Bittlingmayer, Eugene Fama, Ken French, Laurie Krugman, Bing Liang, John Nofsinger, Srinivasan Rangan, Mark Rubinstein, René Stulz (the editor), Avaniidhar Subrahmanyam, Kent Womack, Jason Zweig, two anonymous reviewers, seminar participants at the American Finance Association Meetings (New York, 1999), the 9th Annual Conference on Financial Economics and Accountancy at New York University, Notre Dame University, the University of Illinois, and participants in the Compuserve Investor Forum. All errors are our own.

In this paper, we attempt to shed light on the investment performance of common stocks held directly by households. To do so, we analyze a unique data set that consists of position statements and trading activity for 78,000 households at a large discount brokerage firm over a six-year period ending in January 1997.

Our analyses also allow us to test two competing theories of trading activity. Using a rational expectation framework, Grossman and Stiglitz (1980) argue that investors will trade when the marginal benefit of doing so is equal to or exceeds the marginal cost of the trade. In contrast Odean (1998b), Gervais and Odean (1998), and Caballé and Sákovics (1998) develop theoretical models of financial markets where investors suffer from overconfidence. These overconfidence models predict that investors will trade to their detriment.<sup>1</sup>

Our most dramatic empirical evidence supports the view that overconfidence leads to excessive trading (see Figure 1). On one hand, there is very little difference in the gross performance of households that trade frequently (with monthly turnover in excess of 8.8 percent) and those that trade infrequently. In contrast, households that trade frequently earn a net annualized geometric mean return of 11.4 percent, and those that trade infrequently earn 18.5 percent. These results are consistent with models where trading emanates from investor overconfidence, but are inconsistent with models where trading results from rational expectations. Though liquidity, risk-based rebalancing, and taxes can explain some trading activity, we argue that it belies common sense that these motivations for trade, even in combination, can explain average annual turnover of more than 250 percent for those households that trade most.

We also document that, overall, the households we analyze significantly underperform relevant benchmarks, after a reasonable accounting for transaction costs. These households earn gross returns (before accounting for transaction costs) that are close to those earned by an investment in a value-weighted index of NYSE/AMEX/Nasdaq stocks. During our sample period, an investment in a value-weighted market index earns an annualized geometric mean return of 17.9 percent, the average household earns a gross return of 18.7 percent, and in aggregate households earn a gross return of 18.2 percent. In contrast, the net performance (after accounting for the bid-ask spread and commissions) of these households is below par, with the average household earning 16.4 percent and in aggregate households earning 16.7 percent. The empirical tests supporting these conclusions come from abnormal return calculations that allow each household to self-select its own

<sup>1</sup> In an exception to this finding, Kyle and Wang (1997) argue that when traders compete for duopoly profits, overconfident traders may reap greater profits. This prediction is based on several assumptions that do not apply to individuals trading common stocks. Benos (1998) has a similar result. Daniel, Hirshleifer, and Subrahmanyam (1998) consider the asset price implications of overconfidence but do not directly address investor welfare.

**Figure 1. Monthly turnover and annual performance of individual investors.** The white bar (black bar) represents the gross (net) annualized geometric mean return for February 1991 through January 1997 for individual investor quintiles based on monthly turnover, the average individual investor, and the S&P 500. The net return on the S&P 500 Index Fund is that earned by the Vanguard Index 500. The gray bar represents the monthly turnover.

investment style and from time-series regressions that employ either the Capital Asset Pricing Model (CAPM) or the three-factor model developed by Fama and French (1993) as our benchmark.

Our descriptive analysis provides several additional conclusions that are noteworthy:

1. Households<sup>2</sup> trade common stocks frequently. The average household turns over more than 75 percent of its common stock portfolio annually.
2. Trading costs are high. The average round-trip trade in excess of \$1,000 costs three percent in commissions and one percent in bid-ask spread.
3. Households tilt their investments toward small, high-beta stocks. There is a less obvious tilt toward value (high book-to-market) stocks.

<sup>2</sup> Throughout this paper, “households” and “individual investors” refer to households and investors with discount brokerage accounts. Though we believe that our findings generalize to customers at other discount brokerages, we suspect that the trading practices of retail customers differ. Some of our sample households may have both retail and discount accounts. In these cases, our observations are limited to their discount accounts.

It is the cost of trading and the frequency of trading, not portfolio selections, that explain the poor investment performance of households during our sample period. In fact, the tilt of households toward small stocks and, to a lesser extent, value stocks helps their performance during our sample period (during which small stocks outperform large stocks by 15 basis points per month and value outperforms growth by 20 basis points per month).<sup>3</sup>

The remainder of this paper is organized as follows. We discuss related research in Section I and our data and empirical methods in Section II. Our main descriptive results are presented in Section III. We test the models of investor overconfidence in Section IV. We discuss the impact of price momentum on individual investor performance in Section V and liquidity, risk, and taxes as motivations for trading in Section VI. Concluding remarks are made in Section VII.

### **I. Related Research**

To our knowledge, the current investigation is the first comprehensive study of the aggregate common stock performance of individual investors who manage their own equity investments without the advice of a full-service broker. Schlarbaum, Lewellen, and Lease (1978a) analyze the aggregate common stock performance of investors at a full-service brokerage firm. Odean (1999) and Schlarbaum, Lewellen, and Lease (1978b) analyze the profitability of common stock trades (as distinct from positions held) by individual investors.

Schlarbaum et al. (1978a) calculate monthly gross and net portfolio returns for 2,500 accounts at a retail brokerage firm over a seven-year period ending in December 1970. In a separate paper, Schlarbaum et al. (1978b) analyze the gross and net returns of round-trip trades made by the same 2,500 accounts over the same period. Though they emphasize that their results are conjectural, they conclude that their results “portray an overall picture of quite respectable individual investor security selection acumen.” In contrast, we document that individual investors at a discount brokerage firm during the six-year period ending January 1997 perform poorly.

There are at least three reasons why our results might differ from those in Schlarbaum et al. (1978a, 1978b). First, we analyze households that hold their investments at a discount brokerage firm rather than at a retail brokerage firm. A wide variety of investment advice is available to both retail and discount investors from sources such as newsletters, *Value Line*, and the financial press. Retail brokerage firms also provide stock selection advice to their clients. If this advice is valuable and if investors attend to it, it is

<sup>3</sup> These figures are based on the mean return from February 1991 through January 1997 for the size and book-to-market factors constructed by Fama and French (1993). In the remainder of this paper, when we refer to a size or value premium, our inference is based on the returns of these zero-investment portfolios.

plausible that individual investors at these firms earn both better gross returns and net returns. We would welcome the opportunity to test this hypothesis directly by obtaining a data set similar to that employed in our study from a retail brokerage firm. Barber et al. (1998) and Womack (1996) present evidence that the recommendations of brokerage-house analysts have investment value.

Second, the analysis in Schlarbaum et al. (1978b) focuses on the returns from round-trip trades. There is now evidence that investors have a tendency to sell winning investments and hold on to losing investments (Odean (1998a)). Thus, by analyzing trades rather than position statements (as we do in the current study), Schlarbaum et al. may upwardly bias their return estimates. Schlarbaum et al. (1978a) do attempt to reconstruct monthly positions from trading records and partial end-of-period positions. However, as they point out, stocks purchased before 1964 and sold after 1970 may not appear in their study.

Third, although Schlarbaum et al. (1978a, 1978b) evaluate performance using a variety of market indexes, they do not consider the tendency for individual investors to tilt toward small stocks (though of course firm size did not have the same celebrity status in 1978 that it enjoys today). They do not explicitly address whether such a tilt exists among the individual investors they analyze, but we suspect that it does. This small-stock tilt is likely to be extremely important because small stocks outperform large stocks by 67 basis points *per month* during their sample period.

As do Schlarbaum et al. (1978b), Odean (1999) focuses on the trades of individual investors. He analyzes the timing of trades made by individual investors at a large discount brokerage firm during the seven years ending in December 1993, a sample period that overlaps with ours. (The data sets employed in Odean (1999) and this study are different.) He documents that the stocks individuals sell subsequently outperform the stocks they buy. Thus, the implications of his study and the current investigation are similar: Individual investors trade too much. However, Odean does not analyze the aggregate performance of all stocks held by individuals. Consequently, he is unable to conclude whether individual investors perform well in aggregate, which is the focus of our investigation.

## II. Data and Methods

### A. Household Account Data

The primary data set for this research is information from a large discount brokerage firm on the investments of 78,000 households from January 1991 through December 1996.<sup>4</sup> Of the sampled households, 42 percent are in

<sup>4</sup> The month-end position statements for this period allow us to calculate returns for February 1991 through January 1997. Data on trades are from January 1991 through November 1996.

the western part of the United States, 19 percent in the East, 24 percent in the South, and 15 percent in the Midwest. The data set includes all accounts opened by each household at this discount brokerage firm. The sample selection was performed at the household level and was stratified based on whether the discount brokerage firm labeled the household as a general (60,000 households), affluent (12,000 households), or active trader household (6,000 households). The firm labels households that make more than 48 trades in any year as active traders, households with more than \$100,000 in equity at any point in time as affluent, and all other households as general. If a household qualifies as either active trader or affluent, it is assigned the active trader label. In 1997, approximately 61 percent of all retail accounts at this brokerage firm were classified as general, 28 percent as affluent, and 11 percent as active. Sampled households were required to have an open account with the discount brokerage firm during 1991. Roughly half of the accounts in our analysis were opened prior to 1987 and half were opened between 1987 and 1991.

In this research, we focus on the common stock investments of households. We exclude from the current analysis investments in mutual funds (both open-end and closed-end), American Depositary Receipts (ADRs), warrants, and options. Of the 78,000 sampled households, 66,465 have positions in common stocks during at least one month; the remaining accounts hold either cash or investments in other than individual common stocks. Households have, on average, two accounts: 48 percent have a single account, 27 percent have two, 14 percent have three, and the remaining 11 percent have more than three. The most common reason for two accounts is the tax-preferred status of retirement accounts (e.g., IRAs and Keoghs). Some households also have different accounts for different household members (e.g., custodial accounts for children). Roughly 60 percent of the market value in the accounts is held in common stocks. In these households, more than 3 million trades are made in all securities during the sample period, with common stocks accounting for slightly more than 60 percent of all trades. On average during our sample period, the mean household holds 4.3 stocks worth \$47,334, though each of these figures is positively skewed. The median household holds 2.61 stocks worth \$16,210. In December 1996, these households held more than \$4.5 billion in common stock.

In Table I, we present descriptive information on the trading activity for our sample. Panels A and B show there are slightly more purchases (1,082,107) than sales (887,594) during our sample period, though the average value of stocks sold (\$13,707) is slightly higher than the value of stocks purchased (\$11,205). As a result, the aggregate value of purchases and sales is roughly equal (\$12.1 and \$12.2 billion, respectively). The average trade is transacted at a price of \$31 per share. The value of trades and the transaction price of trades are positively skewed; the medians for both purchases and sales are substantially less than the mean values.

**Table I**  
**Descriptive Statistics on Trade Size, Trade Price,**  
**Transaction Costs, and Turnover**

The sample is account records for 66,465 households at a large discount brokerage firm from January 1991 to December 1996. Spread is calculated as the transaction price divided by the closing price on the day of the transaction minus one (and then multiplied by minus one for purchases). Commission is calculated as the commission paid divided by the value of the trade. Monthly turnover is the beginning-of-month market value of shares purchased in month  $t - 1$  (or sold in month  $t$ ) divided by the total beginning-of-month market value of shares held in month  $t$ . Trade-weighted spread and commission are averages weighted by trade size. Aggregate turnover is the aggregate value of sales (or purchases) divided by the aggregate value of positions held during our sample period.

\*Commissions are calculated based on trades in excess of \$1,000. Including smaller trades results in a mean buy (sale) commission of 2.09 (3.07) percent.

For each trade, we estimate the bid-ask spread component of transaction costs for purchases ( $spr_{d_b}$ ) and sales ( $spr_{d_s}$ ) as

$$spr_{d_s} = \left( \frac{P_{d_s}^{cl}}{P_{d_s}^s} - 1 \right) \quad \text{and} \quad spr_{d_b} = - \left( \frac{P_{d_b}^{cl}}{P_{d_b}^b} - 1 \right), \quad (1)$$

where  $P_{d_s}^{cl}$  and  $P_{d_b}^{cl}$  are the reported closing prices from the Center for Research in Security Prices (CRSP) daily stock return files on the day of a sale and purchase, respectively, and  $P_{d_s}^s$  and  $P_{d_b}^b$  are the actual sale price and purchase price from our account database.<sup>5</sup> Our estimate of the bid-ask spread component of transaction costs includes any market impact that might result from a trade. It also includes an intraday return on the day of the trade. (In Appendix A, we provide a detailed reconciliation of our return calculations.) The commission component of transaction costs is estimated as the dollar value of the commission paid scaled by the total principal value of the transaction, both of which are reported in our account data.

The average purchase costs an investor 0.31 percent, and the average sale costs an investor 0.69 percent in bid-ask spread. Our estimate of the bid-ask spread is very close to the trading cost of 0.21 percent for purchases and 0.63 percent for sales paid by open-end mutual funds from 1966 to 1993 (Carhart (1997)).<sup>6</sup> The average purchase in excess of \$1,000 costs 1.58 percent in commissions, and the average sale in excess of \$1,000 costs 1.45 percent.<sup>7</sup>

In Panels C and D of Table I, we calculate the trade-weighted (weighted by trade size) spreads and commissions. These figures can be thought of as the total cost of conducting the \$24 billion in common stock trades (\$12 billion each in purchases and sales). Trade size has little effect on spread costs (0.27 percent for purchases and 0.69 percent for sales) but substantially reduces the commission costs (0.77 percent for purchases and 0.66 percent for sales).

In sum, the average trade incurs a round-trip transaction cost of about one percent for the bid-ask spread and about three percent in commissions. In aggregate, round-trip trades cost about one percent for the bid-ask spread and about 1.4 percent in commissions.

<sup>5</sup> Kraus and Stoll (1972), Holthausen, Leftwich, and Mayers (1987), Laplante and Muscarella (1997), and Beebower and Priest (1980) use closing prices either before or following a transaction to estimate effective spreads and market impact. See Keim and Madhavan (1998) for a review of different approaches to calculating transactions costs.

<sup>6</sup> Odean (1999) finds that individual investors are more likely to both buy and sell particular stocks when the prices of those stocks are rising. This tendency can partially explain the asymmetry in buy and sell spreads. Any intraday price rises following transactions subtract from our estimate of the spread for buys and add to our estimate of the spread for sells.

<sup>7</sup> To provide more representative descriptive statistics on percentage commissions, we exclude trades of less than \$1,000. The inclusion of these trades results in a round-trip commission cost of five percent on average (2.1 percent for purchases and 3.1 percent for sales).

Finally, we calculate the monthly portfolio turnover for each household. In each month during our sample period, we identify the common stocks held by each household at the beginning of month  $t$  from their position statements. To calculate monthly sales turnover, we match these positions to sales during month  $t$ . The monthly sales turnover is calculated as the shares sold times the beginning-of-month price per share divided by the total beginning-of-month market value of the household's portfolio. To calculate monthly purchase turnover, we match these positions to purchases during month  $t - 1$ . The monthly purchase turnover is calculated as the shares purchased times the beginning-of-month price per share divided by the total beginning-of-month market value of the portfolio.<sup>8</sup> In Panels A and B of Table I we report that, on average, households purchase 6.49 percent and sell 6.23 percent of their stock portfolio each month, though the median household trades much less frequently (buying 2.67 percent of their stock portfolio and selling 2.58 percent). In Panels C and D, we calculate aggregate purchase (sales) turnover by summing all purchases (sales) and dividing by the sum of all positions during our sample period. The aggregate purchase turnover is 6.05 percent and the aggregate sales turnover is 6.06 percent.

In sum, these investors trade their common stocks quite frequently. The average household turns over more than 75 percent of its common stock portfolio each year. This result is uncannily close to the average turnover of 77 percent reported by U.S. common stock mutual funds for the period 1966 to 1993 (Carhart (1997)). In aggregate, these investors turn over more than 70 percent of their invested wealth each year.

### *B. Measuring Return Performance*

The focus of our analysis is the return performance of investments in common stocks by households. We analyze both the gross performance and net performance (after a reasonable accounting for commissions, the bid-ask spread, and the market impact of trades).

We estimate the gross monthly return on each common stock investment using the beginning-of-month position statements from our household data and the CRSP monthly returns file. In so doing, we make two simplifying assumptions. First, we assume that all securities are bought or sold on the last day of the month. Thus, we ignore the returns earned on stocks purchased from the purchase date to the end of the month and include the returns earned on stocks sold from the sale date to the end of the month.

<sup>8</sup> If more shares are sold than were held at the beginning of the month (e.g., because an investor purchases additional shares after the beginning of the month), we assume the entire beginning-of-month position in that security is sold. Similarly, if more shares were purchased in the preceding month than are held in the position statement, we assume the entire position is purchased in the preceding month. Thus, turnover, as we have calculated it, cannot exceed 100 percent in a month.

Second, we ignore intramonth trading (e.g., a purchase on March 6 and a sale of the same security on March 20), though we do include in our analysis short-term trades that yield a position at the end of a calendar month.

In Appendix A, we document that accounting for the exact timing of trades would reduce the performance of individual investors by about two basis points per month. In Appendix B, we document that accounting for intramonth trades would improve the performance of individual investors reported in our main results by less than one basis point per month. More important, a careful accounting for both the exact timing of trades and the profitability of intramonth trades indicates that the results we report in the main text are slightly high for our full sample and for every sample partition that we analyze.

Consider the common stock portfolio for a particular household. The gross monthly return on the household's portfolio ( $R_{ht}^{\text{gr}}$ ) is calculated as

$$R_{ht}^{\text{gr}} = \sum_{i=1}^{s_{ht}} p_{it} R_{it}^{\text{gr}}, \quad (2)$$

where  $p_{it}$  is the beginning-of-month market value for the holding of stock  $i$  by household  $h$  in month  $t$  divided by the beginning-of-month market value of all stocks held by household  $h$ ,  $R_{it}^{\text{gr}}$  is the gross monthly return for stock  $i$ , and  $s_{ht}$  is the number of stocks held by household  $h$  in month  $t$ .

For security  $i$  in month  $t$ , we calculate a monthly return net of transaction costs ( $R_{it}^{\text{net}}$ ) as

$$(1 + R_{it}^{\text{net}}) = (1 + R_{it}^{\text{gr}}) \frac{(1 - c_{it}^s)}{(1 + c_{i,t-1}^b)}, \quad (3)$$

where  $c_{it}^s$  is the cost of sales scaled by the sales price in month  $t$  and  $c_{i,t-1}^b$  is the cost of purchases scaled by the purchase price in month  $t - 1$ . The costs of purchases and sales include the commissions and bid-ask spread components, which are estimated individually for each trade as previously described. Thus, for a security purchased in month  $t - 1$  and sold in month  $t$ , both  $c_{it}^s$  and  $c_{i,t-1}^b$  are positive; for a security neither purchased in month  $t - 1$  nor sold in month  $t$ , both  $c_{it}^s$  and  $c_{i,t-1}^b$  are zero. Because the timing and cost of purchases and sales vary across households, the net return for security  $i$  in month  $t$  varies across households. The net monthly portfolio return for each household is

$$R_{ht}^{\text{net}} = \sum_{i=1}^{s_{ht}} p_{it} R_{it}^{\text{net}}. \quad (4)$$

If only a portion of the beginning-of-month position in stock  $i$  is purchased or sold, the transaction cost is applied only to that portion. We estimate the aggregate gross and net monthly return earned by individual investors as

$$RAG_t^{\text{gr}} = \sum_{h=1}^{n_{ht}} x_{ht} R_{ht}^{\text{gr}} \quad \text{and} \quad RAG_t^{\text{net}} = \sum_{h=1}^{n_{ht}} x_{ht} R_{ht}^{\text{net}}, \quad (5)$$

where  $n_{ht}$  is the number of households with common stock investment in month  $t$  and  $x_{ht}$  is the beginning-of-month market value of common stocks held by household  $h$  divided by the beginning-of-month market value of common stock held by all households. We estimate the gross and net monthly return earned by the average household as

$$RH_t^{\text{gr}} = \frac{1}{n_{ht}} \sum_{h=1}^{n_{ht}} R_{ht}^{\text{gr}} \quad \text{and} \quad RH_t^{\text{net}} = \frac{1}{n_{ht}} \sum_{h=1}^{n_{ht}} R_{ht}^{\text{net}}. \quad (6)$$

### C. Risk-Adjusted Return Performance

We calculate four measures of risk-adjusted performance.<sup>9</sup> First, we calculate an own-benchmark abnormal return for individual investors, which is similar in spirit to that proposed by Grinblatt and Titman (1993) and Lakonishok, Shleifer, and Vishny (1992). In this abnormal return calculation, the benchmark for household  $h$  is the month  $t$  return of the beginning-of-year portfolio held by household  $h$ .<sup>10</sup> It represents the return that the household would have earned had it merely held its beginning-of-year portfolio for the entire year. The own-benchmark abnormal return is the return earned by household  $h$  less the own-benchmark return; if the household did not trade during the year, the own-benchmark return is zero for all 12 months during the year. In each month, the abnormal returns across households are averaged, yielding a 72-month time-series of mean monthly own-benchmark abnormal returns. Statistical significance is calculated using  $t$ -statistics based on this time-series. The advantage of the own-benchmark abnormal return

<sup>9</sup> A fifth alternative measure of risk-adjusted returns is the Sharpe ratio, the mean excess return divided by its standard deviation. The average Sharpe ratio for the gross (net) return of the average household in our sample is 0.179 (0.134). The Sharpe ratio for the market during our sample period is 0.366 = (1.0578/2.8880). We do not report Sharpe ratios for most partitions of the data because we do not observe the entire portfolios of these households. Unobserved assets such as equities at other brokerage firms and mutual fund holdings are unlikely to greatly change average observed portfolio returns, but they are likely to reduce average observed volatility. Thus we tend to underestimate the total portfolio Sharpe ratios of investors with significant unobserved assets.

<sup>10</sup> When calculating this benchmark, we begin the year on February 1. We do so because our first monthly position statements are from the month end of January 1991. If the stocks held by a household at the beginning of the year are missing CRSP returns data during the year, we assume that stock is invested in the remainder of the household's portfolio.

measure is that it does not adjust returns according to a particular risk model. No model of risk is universally accepted; furthermore, it may be inappropriate to adjust investors' returns for stock characteristics that they do not associate with risk. The own-benchmark measure allows each household to self-select the investment style and risk profile of its benchmark (i.e., the portfolio it held at the beginning of the year), thus emphasizing the effect trading has on performance.

Second, we calculate the mean monthly market-adjusted abnormal return for individual investors by subtracting the return on a value-weighted index of NYSE/AMEX/Nasdaq stocks from the return earned by individual investors.

Third, we employ the theoretical framework of the capital asset pricing model and estimate Jensen's alpha by regressing the monthly excess return earned by individual investors on the market excess return. For example, to evaluate the gross monthly return earned by individual investors in aggregate, we estimate the following monthly time-series regression:

$$(RAG_t^{gr} - R_{ft}) = \alpha_i + \beta_i(R_{mt} - R_{ft}) + \epsilon_{it}, \quad (7)$$

where  $R_{ft}$  = the monthly return on T-bills,<sup>11</sup>  $R_{mt}$  = the monthly return on a value-weighted market index,  $\alpha_i$  = the CAPM intercept (Jensen's alpha),  $\beta_i$  = the market beta, and  $\epsilon_{it}$  = the regression error term. The subscript  $i$  denotes parameter estimates and error terms from regression  $i$ , where we estimate four regressions: one each for the gross and net performance of individual investors in aggregate, and one each for the gross and net performance of the average household.

Fourth, we employ an intercept test using the three-factor model developed by Fama and French (1993). For example, to evaluate the performance of individuals in aggregate, we estimate the following monthly time-series regression:

$$(RAG_t^{gr} - R_{ft}) = \alpha_j + \beta_j(R_{mt} - R_{ft}) + s_jSMB_t + h_jHML_t + \epsilon_{jt}, \quad (8)$$

where  $SMB_t$  is the return on a value-weighted portfolio of small stocks minus the return on a value-weighted portfolio of large stocks and  $HML_t$  is the return on a value-weighted portfolio of high book-to-market stocks minus the return on a value-weighted portfolio of low book-to-market stocks.<sup>12</sup> The regression yields parameter estimates of  $\alpha_j$ ,  $\beta_j$ ,  $s_j$ , and  $h_j$ . The error term in the regression is denoted by  $\epsilon_{jt}$ . The subscript  $j$  denotes parameter estimates and error terms from regression  $j$ , where we again estimate four regres-

<sup>11</sup> The return on Treasury bills is from *Stocks, Bonds, Bills, and Inflation, 1997 Yearbook*, Ibbotson Associates, Chicago, Ill.

<sup>12</sup> The construction of these portfolios is discussed in detail in Fama and French (1993). We thank Kenneth French for providing us with these data.

sions. We place particular emphasis on the Fama–French intercept tests, since individual investors tilt their portfolios toward small stocks. The three-factor model provides a reasonable adjustment for this small stock tilt.<sup>13</sup>

Fama and French (1993) argue that the risk of common stock investments can be parsimoniously summarized as risk related to the market, firm size, and a firm's book-to-market ratio. We measure these three risk exposures using the coefficient estimates on the market excess return ( $R_{mt} - R_{ft}$ ), the size zero investment portfolio ( $SMB_t$ ), and the book-to-market zero-investment portfolio ( $HML_t$ ) from the three-factor regressions. Portfolios with above-average market risk have betas greater than one,  $\beta_j > 1$ . Portfolios with a tilt toward small (value) stocks relative to a value-weighted market index have size (book-to-market) coefficients greater than zero,  $s_j > 0$  ( $h_j > 0$ ).

We suspect there is little quibble with interpreting the coefficient on the market excess return ( $\beta_j$ ) as a risk factor. Interpreting the coefficient estimates on the size and the book-to-market zero-investment portfolios is more controversial. For the purposes of this investigation, we are interested in measuring risk as perceived by individual investors. As such, it is our casual observation that investors view common stock investment in small firms as riskier than that in large firms. Thus, we would willingly accept a stronger tilt toward small stocks as evidence that a particular group of investors is pursuing a strategy that it perceives as riskier. It is less clear to us whether a tilt toward high book-to-market stocks (which tend to be ugly, financially distressed, firms) or toward low book-to-market stocks (which tend to be high-growth firms) is *perceived* as riskier by investors. As such, we interpret the coefficient estimates on the book-to-market zero-investment portfolio with a bit more trepidation.<sup>14</sup>

### III. Results

#### A. Full Sample Results

Our main findings for the full sample can be summarized simply. The gross return earned by individual investors in aggregate ( $RAG_t^{gr}$ ) and the gross return earned by the average household ( $RH_t^{gr}$ ) are remarkably close to that earned by an investment in a value-weighted index of NYSE/AMEX/Nasdaq stocks.<sup>15</sup> The annualized geometric mean return earned by individ-

<sup>13</sup> Lyon, Barber, and Tsai (1999) document that intercept tests using the three-factor model are well specified in random samples and samples of large or small firms. Thus, the Fama–French intercept tests employed here account well for the small stock tilt of individual investors.

<sup>14</sup> Some authors have also identified price momentum effects in stock returns. We discuss momentum in Section V.

<sup>15</sup> We use the NYSE/AMEX/Nasdaq value-weighted market index constructed by Fama and French (1993). Firms comprising the index must have data for firm size and book-to-market ratio. The correlation between this market index and the NYSE/AMEX/Nasdaq value-weighted index from CRSP is 99.9 percent.

ual investors in aggregate, the average household, and the value-weighted market index are 18.2, 18.7, and 17.9 percent, respectively. In contrast, the net returns earned by individual investors in aggregate ( $RAG_t^{\text{net}}$ ) and the net return earned by the average household ( $RH_t^{\text{net}}$ ) underperform the value-weighted index by more than 100 basis points annually. The net annualized geometric mean return earned by individual investors in aggregate and by the average household are 16.7 and 16.4 percent, respectively.

The results of this analysis are presented in Table II. Panel A presents results for the gross performance of individual investors in aggregate, Panel B presents results for the average household. Three of the four performance measures indicate that the gross performance of individual investors is unremarkable; neither the market-adjusted return, Jensen's alpha, nor the intercept test from the Fama–French three-factor model is reliably different from zero. The fourth performance measure, the own-benchmark abnormal return, is reliably negative. This result indicates that the investors would have earned higher returns from following a buy-and-hold strategy; they hurt their *gross* performance by trading.

Also noteworthy in these results are the coefficient estimates on the market, size, and book-to-market factors. Individual investors tilt toward small stocks with high market risk. The market beta for stocks held by individual investors is reliably greater than one and the coefficient estimate on  $SMB_t$  is reliably positive. Though in aggregate individual investors have no tilt toward value or growth, the average household has a slight tilt toward value stocks (those with high book-to-market ratios) and a more pronounced tilt toward small stocks.<sup>16</sup> These tilts serve individual investors well during our period of analysis; the mean monthly returns on  $SMB_t$  and  $HML_t$  during our 72-month sample period are 0.15 and 0.20 percent, respectively. This observation can account for the fact that the market-adjusted return performance of individual investors is positive (albeit unreliably so), while Jensen's alpha (CAPM intercept) and the intercept test from the Fama–French three-factor model are negative.

The style preferences of individual investors complement those of institutions. Institutional investors have a clear preference for large stocks. Gompers and Metrick (1998) document this preference for large institutions; Carhart (1997) and Falkenstein (1996) document a similar bias for mutual funds. As is the case for individual investors, the growth or value preference of institutions is less obvious. Gompers and Metrick (1998) document that large institutions prefer value stocks, but Carhart (1997, Table III) documents that mutual fund holdings tilt toward growth stocks.<sup>17</sup>

<sup>16</sup> Aggregate measures weight each household by the value of that household's common stocks. Average household measures weight each household equally.

<sup>17</sup> Kang and Stulz (1997) document that foreign investors in Japanese equity markets prefer large growth stocks. It is likely that these foreign investors are predominantly institutions.

**Table II**  
**Summary of the Percentage Monthly Abnormal Return Measures**  
**for the Average Household and Aggregate Household**

Returns are based on month-end position statements for 66,465 households at a large discount brokerage firm from January 1991 to December 1996. Panel A (Panel C) presents results for the gross (net) return on a portfolio that mimics the aggregate investment of all households. Panel B (Panel D) presents results for the gross (net) return on a portfolio that mimics the investment of the average household. Own-benchmark abnormal return is the return on the household portfolio minus the return on the portfolio the household held at the end of the previous January. Market-adjusted return is the return on the household portfolio less the return on a value-weighted NYSE/AMEX/Nasdaq index. CAPM is the results from a time-series regression of the household excess return on the market excess return ( $R_{mt} - R_{ft}$ ). Fama–French three-factor is the results from time-series regression of household excess return on the market excess return, a zero-investment book-to-market portfolio ( $HML_t$ ), and a zero-investment size portfolio ( $SMB_t$ ).  $p$ -values are presented in parentheses.

**Table III**  
**Descriptive Statistics, Gross Returns, and Net Returns for Household Quintiles formed on Beginning Position Value**

The sample is account records for 66,465 households at a large discount brokerage firm from January 1991 to December 1996. Households are sorted into quintiles based on the market value of common stocks in the first month that a household appears during our sample period. Quintile 1 contains households with the smallest market value of common stock holdings, quintile 5 contains households with the largest value. Beginning position value is the market value of common stocks held in the first month that the household appears during our sample period. Mean monthly turnover is the average of sales and purchase turnover. Coefficient estimates are those from a time-series regression of the gross average household excess return on the market excess return ( $R_{mt} - R_{ft}$ ), a zero-investment book-to-market portfolio ( $HML_t$ ), and a zero-investment size portfolio ( $SMB_t$ ). Raw return is the average monthly return for the average household. Own-benchmark abnormal return is the return on the household portfolio minus the return on the portfolio the household held at the end of the previous January. Market-adjusted return is the return on the household portfolio less the return on a value-weighted NYSE/AMEX/Nasdaq index. CAPM intercept is the estimated intercept from a time-series regression of the household excess return on the market excess return ( $R_{mt} - R_{ft}$ ). Fama-French intercept is the estimated intercept from time-series regressions of household excess return on the market excess return, a zero-investment book-to-market portfolio ( $HML_t$ ), and a zero-investment size portfolio ( $SMB_t$ ).  $p$ -values are presented in parentheses.

\*\*\*, \*\*, and \* indicate significance at the 1, 5, and 10 percent levels, respectively (two-tailed). The null hypothesis for beta (the coefficient estimate on the market excess return) is  $H_0: \beta = 1$  except in the difference column, where the null hypothesis is  $H_0: \beta = 0$ .

The more interesting findings of our analysis are contained in Panels C and D of Table II. Net of transaction costs, individual investors perform poorly. Both the market-adjusted return and the CAPM intercepts are negative, though unreliably so. The own-benchmark abnormal return and the Fama–French intercept provide the most compelling evidence of underperformance. These performance measures indicate significant underperformance of 15 to 31 basis points per month (1.8 percent to 3.7 percent per year, with *t*-statistics ranging from  $-2.20$  to  $-10.21$ ). These two performance measures are most appropriate in our setting because they control for the style preference of individual investors: small stocks with above-average market risk. In particular, the own-benchmark abnormal returns indicate individual investors would have increased their annual return by about two percent had they merely held their beginning-of-year portfolio. In combination, these results indicate that the net return performance of individual investors is reliably negative.

One might wonder whether our results are driven by a short sample period coinciding with an unusual stock market. Though the market returned about 18 percent per year during our sample period, the market return was negative in 20 of the 72 months. When we compare the performance of individual investors during the 20 months when the market was down to the 52 months in which the market was up, the performance measures presented in Table II are virtually identical.

### *B. Sorting on Portfolio Size*

We test the robustness of our results across different position sizes by partitioning the households into quintiles on the basis of portfolio size. We define portfolio size as the market value of common stocks held in the first month for which there is a position statement.<sup>18</sup> Each quintile represents the common stock investments of more than 12,000 households.

Descriptive statistics on the partition by portfolio size are presented in Table III, Panel A. The largest portfolios have a mean beginning position market value of \$149,750, the smallest portfolios average \$1,581. Small portfolios have slightly higher monthly turnover (6.68 percent) than large portfolios (6.33 percent). As before, we estimate the parameters of the Fama–French three-factor model, where the dependent variable is the monthly mean gross household excess return for each quintile.<sup>19</sup> The coefficient estimates on the market, size, and book-to-market factors reveal that small portfolios tilt more heavily toward high-beta, small, value stocks than do large portfolios.

<sup>18</sup> If the first position statement appears after January 1991, we do not discount the market value of the common stocks to January 1991 in our rankings. Our results are virtually identical if we discount the market value of these common stocks using the return on the value-weighted market index.

<sup>19</sup> In the interest of parsimony, here and in the remainder of the paper we do not report results for the aggregate performance of each partition. We note when conclusions are different using the aggregate performance.

The gross and net returns for each quintile are presented in Table III, Panels B and C. Focusing first on the gross performance (Panel B), we find that small portfolios (quintile 1) earn higher average returns than large portfolios (quintile 5), though the difference is not reliably different from zero. This difference is likely attributable to the fact that small portfolios tilt more heavily toward small value stocks, which performed well during our sample period. The net performance results are presented in Panel C. The market-adjusted return and Jensen's alpha are similar to those reported for the full sample for each quintile. Though the point estimates are consistently negative, they are not reliably so. Of course, these risk-adjustments ignore the fact that investors are tilting toward small value stocks. In contrast, the own-benchmark abnormal returns and the intercept tests from the Fama–French three-factor model indicate significant underperformance, ranging from 15 to 37 basis points per month, in each of the quintiles. In sum, after a reasonable accounting for the size and value tilts of small investors, we document that both small and large portfolios underperform.

### *C. Cross-Sectional Variation in Performance*

We should emphasize that the aggregate performance and average household performance, though germane and interesting, mask considerable cross-sectional variation in the performance across households. For each household, we calculate the mean monthly market-adjusted abnormal return. We present the distribution of these means in Table IV.<sup>20</sup> Consistent with the results presented in Table II, the median household earns a gross monthly market-adjusted return of  $-0.01$  percent and a net return of  $-0.14$  percent. Though 49.3 percent of households outperform a value-weighted market index before transaction costs, only 43.4 percent outperform the index after costs. Nonetheless, many households perform very well: 25 percent of all households beat the market, after accounting for transaction costs, by more than 0.50 percent per month (more than six percent annually). Conversely, many households perform very poorly: 25 percent of all households underperform the market, after accounting for transaction costs, by more than 0.73 percent per month (more than eight percent annually).

## **IV. Overconfidence and Performance**

It is well documented that people tend to be overconfident (e.g., Alpert and Raiffa (1982), Griffin and Tversky (1992); see Odean (1998b) for a more detailed review). Odean (1998b), Gervais and Odean (1998), and Caballé and Sákovics (1998) develop theoretical models of financial markets where in-

<sup>20</sup> We omit from this analysis accounts that held common stocks for fewer than 12 months during our 72-month sample period.

**Table IV**  
**Cross-Sectional Distribution of Percentage Monthly Gross  
and Net Market-Adjusted Household Returns**

The sample is account records for 66,465 households at a large discount brokerage firm from January 1991 to December 1996. Households with position statements in 12 or fewer months are omitted from this analysis. Though the median values are virtually identical when these households are included, more extreme values are observed.

|                      | Gross Monthly<br>Market-Adjusted Return<br>(%) | Net Monthly<br>Market-Adjusted Return<br>(%) |
|----------------------|------------------------------------------------|----------------------------------------------|
| Minimum              | -19.46                                         | -20.85                                       |
| 1st percentile       | -4.32                                          | -4.86                                        |

\*\*\* indicates significant difference from 50 percent at the 1% level.

vestors suffering from overconfidence trade too much (i.e., trading, at the margin, reduces their expected utility). In contrast, in a rational expectation framework, Grossman and Stiglitz (1980) argue that investors will trade when the marginal benefit of doing so is equal to or exceeds the marginal cost of the trade (including the cost of acquiring information). Odean (1998b) analyzes a variation of Grossman and Stiglitz's model in which investors are overconfident. The two models yield different predictions about the gains of trading. The rational expectations model predicts that investors who trade more (i.e., those whose expected trading is greater) will have the same expected utility as those who trade less. The overconfidence model predicts that investors who trade more will have lower expected utility.

Consider the implications of these two models in our empirical setting. The overconfidence model predicts that the net return performance of households with high turnover will be lower than that of households with low turnover, while making no prediction about the differences in gross returns. In Grossman–Stiglitz, active and passive investors have equivalent expected utilities. Active traders must earn higher expected gross returns in order to

offset their greater trading costs.<sup>21</sup> The Grossman–Stiglitz model therefore predicts that the gross risk-adjusted return performance of households with high turnover will be higher than that of households with low turnover, but there will be little difference in the net risk-adjusted returns.

To test these competing models, we partition our sample of households into quintiles on the basis of mean monthly turnover (defined as the average of purchase and sale turnover). Each quintile represents the common stock investments of more than 12,000 households. Descriptive statistics for each of the quintiles are presented in Table V, Panel A. The households with low turnover average 0.19 percent turnover per month, those with high turnover average 21.49 percent. To qualify as a high turnover portfolio, a household would need to turn over at least 8.7 percent of its portfolio in an average month. Households with low turnover also tend to have larger accounts.

As before, we estimate the parameters of the Fama–French three-factor model, where the dependent variable is the monthly mean gross household excess return for each turnover quintile. The coefficient estimates on the market, size, and book-to-market factors reveal that the high turnover households tilt more heavily toward high-beta, small, growth stocks than do the low turnover households.

The gross and net returns for each turnover quintile are presented in Table V, Panels B and C. Focusing first on the gross performance (Panel B), we find that high turnover households (quintile 5) do not significantly outperform low turnover households (quintile 1). In fact, the intercept test based on the Fama–French three-factor model, which accounts for the tendency of the high turnover portfolio to tilt more heavily toward high-beta, small, growth stocks, indicates that the two high turnover quintiles (quintiles 4 and 5) underperform by 24 and 36 basis points per month. Though marginally statistically significant ( $p$ -values of 0.143 and 0.104, respectively), we believe these figures to be economically large (approximately three to four percent annually). Regardless of whether one accepts these results as statistically significant, the prediction of the Grossman and Stiglitz model is not supported; those who trade most do not earn higher gross returns.

The analysis of net returns (Panel C) is quite interesting. Regardless of the method used to measure performance, the high turnover households (quintile 5) underperform the low turnover households (quintile 1). The underperformance ranges from 46 basis points per month (5.5 percent per year,  $t = -1.56$ ) using market-adjusted returns to an astoundingly high 80 basis points per month (9.6 percent per year,  $t = -4.59$ ) based on the Fama–French intercept. The own-benchmark abnormal returns indicate that the

<sup>21</sup> Rather than increasing their gross returns, active traders could alternatively achieve the same expected utility as less active traders by lowering their volatility through trading. We find no evidence of this however. For example, the average (net) Sharpe ratio of the quintile that trades most actively (0.092) is one-half that of the quintile that trades least actively (0.180). Though these Sharpe ratios do not consider investors' total portfolios of assets (see footnote 9), they indicate that active traders do not have higher volatility adjusted returns within the observed equity portfolios.

**Table V**  
**Descriptive Statistics, Gross Returns, and Net Returns for**  
**Household Quintiles Formed on Mean Turnover**

The sample is account records for 66,465 households at a large discount brokerage firm from January 1991 to December 1996. Households are sorted into quintiles based on monthly turnover (the average of sales and purchase turnover) during our sample period. Quintile 1 contains households with the lowest turnover, quintile 5 contains households with the highest. Beginning position value is the market value of common stocks held in the first month that the household appears during our sample period. Mean monthly turnover is the average of sales and purchase turnover. Coefficient estimates are those from a time-series regression of the gross average household excess return on the market excess return ( $R_{mt} - R_{ft}$ ), ( $HML_t$ ), and a zero-investment size portfolio ( $SMB_t$ ). Raw return is the average monthly return for the average household. Own-benchmark abnormal return is the return on the household portfolio minus the return on the portfolio the household held at the end of the previous January. Market-adjusted return is the return on the household portfolio less the return on a value-weighted NYSE/AMEX/Nasdaq index. CAPM intercept is the estimated intercept from a time-series regression of the household excess return on the market excess return ( $R_{mt} - R_{ft}$ ). Fama-French intercept is the estimated intercept from time-series regressions of household excess return on the market excess return, a zero-investment book-to-market portfolio ( $HML_t$ ), and a zero-investment size portfolio ( $SMB_t$ ).  $p$ -values are presented in parentheses.

\*\*\*, \*\*, and \* indicate significance at the 1, 5, and 10 percent levels, respectively (two-tailed). The null hypothesis for beta (the coefficient estimate on the market excess return) is  $H_0: \beta = 1$  except in the difference column, where the null hypothesis is  $H_0: \beta = 0$ .

trading of high turnover households costs them 57 basis points per month (6.8 percent per year) relative to the returns earned by low turnover households. Again, these differences are not consistent with the Grossman and Stiglitz model, but are consistent with the predictions of the overconfidence models.

In sum, differences in gross returns across the turnover quintiles are small. An investment mimicking that of the average household in each quintile would have earned a gross annualized mean geometric return that ranged from 18.5 percent (for quintile 2) to 18.7 percent (for quintile 1). However, there are dramatic differences in the net returns across the turnover quintiles. An investment mimicking the average household of the high turnover quintile would have earned a net annualized mean geometric return of 11.4 percent, while an investment that mimicked the low turnover quintile would have earned 18.5 percent. These returns are graphed in Figure 1.

## V. Price Momentum

Some authors have identified price momentum effects in stock returns—that is, stocks that have performed well recently tend to earn higher returns than those that have not (Jegadeesh and Titman (1993)). It is unlikely, however, that individual investors view momentum as a risk factor. Thus, we do not include momentum when calculating risk-adjusted returns.

Nonetheless, it is interesting to consider how momentum affects the performance of individual investors. In general, the sampled investors are antimomentum investors; that is, on average they tend to hold stocks that have recently underperformed the market. This is consistent with the evidence that individual investors tend to hold their losers and sell their winning investments (Odean (1998a)).

To investigate the effect of price momentum on the performance of individual investors, we add a zero-investment price-momentum portfolio to the Fama–French three-factor regressions described in Section II.C.<sup>22</sup> This portfolio is long stocks that have performed well recently and short those that have performed poorly. We then estimate time-series regressions for each of the sample partitions described in the main text. In all sample partitions, the estimated coefficient estimate on the zero-investment price-momentum portfolio is negative; individuals tend to tilt their investments toward stocks that have performed poorly recently.

The net performance of individual investors in aggregate (on average) is  $-0.053$  ( $-0.041$ ) percent per month when price momentum is included as an additional characteristic. Though still negative, these intercepts are smaller in magnitude than those from the Fama–French three-factor regressions and are not statistically significant.

<sup>22</sup> The construction of the zero-investment price-momentum portfolio is described in Carhart (1997). We thank Mark Carhart for providing us with the returns data.

Our principal finding—that those investors who trade most actively realize, on average, the lowest net returns—is unaffected by the inclusion of a momentum characteristic in the regressions. These time-series regressions result in an intercept of  $-0.398$  percent per month for those who trade most actively (quintile 5) and  $0.070$  percent per month for those who trade least (quintile 1). Thus, when one controls for their tendency to hold poorly performing stocks, those investors who trade least actively achieve reasonable performance. More important, however, is the finding that active investors continue to underperform less active investors. The differences in the intercepts remains large and statistically significant:  $-0.468$  percent per month.

## VI. Liquidity, Rebalancing, and Tax-Motivated Trading

To this point, we have focused on information-motivated versus overconfidence-motivated trading. The empirical evidence we have presented solidly favors overconfidence as the major motivation for trading, since trading unambiguously hurts investor performance; however, there are other motivations for trading, which we consider in this section.

### A. Liquidity

Investors who face liquidity shocks over time will trade as a rational response to those shocks. Thus, liquidity shocks can explain some trading activity. But, they seem implausible as an explanation of the 75 percent annual turnover that we document for the average individual investor and belie common sense as an explanation of the more than 250 percent annual turnover of the households who trade most. Investors facing rapidly fluctuating liquidity needs can, in most cases, find less expensive means to finance these than rapid trading in and out of stocks.

Moreover, the trading that results from liquidity shocks can be accomplished at a much lower cost by investing in mutual funds than by investing in individual common stocks. To illustrate this point, we analyze the returns on the Vanguard Index 500 mutual fund, a large passive mutual fund that claims to match the performance of the Standard and Poor's 500. Investors can move in and out of this fund at no cost. In contrast to the performance of the average or aggregate household, this index fund does not underperform when compared to any of the standard performance benchmarks. During our sample period, this fund earned an annualized geometric mean return of 17.8 percent while the value-weighted market index earned 17.9 percent. The market-adjusted return, the CAPM intercept, and the Fama–French intercept for the Vanguard Index 500 were  $-0.002$ ,  $-0.004$ , and  $0.009$  percent, respectively. A passively managed mutual fund clearly provides a lower cost means of managing liquidity shocks than does investment in individual common stocks.

### *B. Rebalancing*

Investors who desire a portfolio with certain risk characteristics will rationally rebalance their portfolio to maintain this risk profile. With an average holding of four common stocks, we believe that risk-based rebalancing is not a significant motivation for trading in the households that we study. Risk-based rebalancing as an explanation of the 75 percent annual turnover that we document for the average household belies common sense. Investors can manage the risk composition of their portfolio at much lower cost by carefully selecting a portfolio of mutual funds.

### *C. Taxes*

The single most compelling reason for investors to hold individual common stocks in lieu of mutual funds is taxes. Investors who hold stocks that have lost value since their purchase can realize those losses. These losses can be used to shelter gains and thereby reduce the investor's tax liability.<sup>23</sup>

Tax-loss selling cannot completely explain the results that we document here for three reasons. First, it is implausible that tax-motivated trading would yield an annual turnover rate of 75 percent. A simple example illustrates this point: Consider an investor who buys the value-weighted market index on January 1 of each year 1991 to 1996. In December of the average year, this investor would be able to sell 24 percent of her portfolio for a loss. Of course, this example assumes a holding period of 12 months. The turnover resulting from tax-loss selling will decline as this holding period increases.

Second, we find high turnover and significant underperformance in both taxable and tax-deferred accounts. If tax-loss selling is the major motivation for trading we would expect to find little trading in tax-deferred accounts. On the other hand, if overconfidence is the major motivation for trading, we would expect to find, as we do, active trading and significant underperformance in both taxable and tax-deferred accounts. We partition the accounts in our sample into taxable and tax-deferred accounts (i.e., Individual Retirement Accounts and Keogh Accounts). In Table VI, Panel A, we present descriptive statistics for the taxable and tax-deferred accounts. Turnover in tax-deferred accounts is high: 67.6 percent annually (monthly turnover of 5.63 percent times 12), though not as high as in taxable accounts: 89.4 percent annually (monthly turnover of 7.45 percent times 12). The difference in turnover may result from tax-motivated trading or it may be that investors associate their retirement accounts with future safety and therefore trade less speculatively in these accounts.

In Table VI, Panels B and C, we present the gross and net return performances of taxable and tax-deferred accounts. The gross returns earned by taxable and tax-deferred accounts are quite similar (see Panel B). The net

<sup>23</sup> Though losses on mutual funds can also be used to reduce an investor's tax liability, the probability of having a loss on a mutual fund is less than the probability of observing at least one losing investment in a well-diversified portfolio of common stocks.

**Table VI**  
**Descriptive Statistics, Gross Return, and Net Return**  
**for Taxable and Tax-Deferred Accounts**

The sample is account records for 66,465 households at a large discount brokerage firm from January 1991 to December 1996. Accounts are partitioned as either taxable or tax deferred (IRA, Keogh, SEP-IRA). Beginning position value is the market value of common stocks held in the first month that the household appears during our sample period. Mean monthly turnover is the average of sales and purchase turnover. Coefficient estimates are those from a time-series regression of the gross average household excess return on the market excess return ( $R_{mt} - R_{ft}$ ), a zero-investment book-to-market portfolio ( $HML_t$ ), and a zero-investment size portfolio ( $SMB_t$ ). Raw return is the average monthly return for the average household. Own-benchmark abnormal return is the return on the household portfolio minus the return on the portfolio the household held at the end of the previous January. Market-adjusted return is the return on the household portfolio less the return on a value-weighted NYSE/AMEX/Nasdaq index. CAPM intercept is the estimated intercept from a time-series regression of the household excess return on the market excess return ( $R_{mt} - R_{ft}$ ). Fama-French intercept is the estimated intercept from time-series regressions of household excess return on the market excess return, a zero-investment book-to-market portfolio ( $HML_t$ ), and a zero-investment size portfolio ( $SMB_t$ ).  $p$ -values are presented in parentheses.

\*\*\*, \*\*, and \* indicate significance at the 1, 5, and 10 percent levels, respectively (two-tailed). The null hypothesis for beta (the coefficient estimate on the market excess return) is  $H_0: \beta = 1$  except in the difference column, where the null hypothesis is  $H_0: \beta = 0$ .

returns earned by taxable and tax-deferred accounts are both poor, after a reasonable accounting for the small stock tilt of these individuals (see Panel C). The tax-deferred accounts outperform the taxable accounts by about six basis points per month. In short, the general tenor of our results is similar for the taxable and tax-deferred accounts.

Third, Odean (1998a, 1999) documents that most investor trading activity is inconsistent with tax-motivated trading. He observes that investors at a discount brokerage sell profitable investments twice as often as unprofitable investments (during the period 1987 to 1993) and that, relative to their opportunities to do so, these investors are about one and one-half times more likely to realize any gain than any loss. They do engage in tax-loss selling late in the year, but December is the only month in which they realize losses at as fast a rate as they do gains.

Finally, we should emphasize that trading not associated with tax-loss selling will further hurt the after-tax returns of individual investors. Not only does this trading incur trading costs, when done in a taxable account it also accelerates the payment of capital gain taxes that could be otherwise deferred.

#### *D. Gambling*

To what extent may a desire to gamble account for the excessive trading we observe? Many people appear to enjoy gambling. Some buy lottery tickets. Others gamble at casinos. We consider two distinct aspects of gambling: risk-seeking and entertainment. Risk-seeking is when one demonstrates a preference for outcomes with greater variance but equal or lower expected return. In equity markets the simplest way to increase variance without increasing expected return is to underdiversify. Excessive trading has a related, but decidedly different, effect; it decreases expected returns without decreasing variance. Thus risk-seeking may account for underdiversification (though underdiversification could also result from simple ignorance of its benefits), but it does not explain excessive trading.

A second aspect of gambling is the entertainment derived from placing and realizing bets. When coupled with the overconfident belief that these bets are expected-wealth enhancing, it is easy to see that the entertainment utility of gambling will fuel greater trading. There is also the possibility that people may trade for entertainment while fully realizing that each trade is more likely than not to reduce their personal future wealth. (Note that this is different from realizing that the trades of others are wealth reducing.) We favor the hypothesis that most investors trade excessively because they are overconfident, or because they are overconfident and they enjoy trading, over the hypothesis that they trade purely for entertainment and expect thereby to lower their wealth. Many studies have established that people are overconfident. We know of no study demonstrating that ordinary investors expect to lower their wealth through trading.

It is possible that some investors set aside a small portion of their wealth with which they trade for entertainment, while investing the majority more prudently. If “entertainment accounts” are driving our findings, we would expect turnover and underperformance to decline as the common stocks in the accounts we observe represent a larger proportion of a household’s total wealth. We are able to test this hypothesis directly and find no support for it. For approximately one-third of our sample, the households reported their net worth at the time they opened their accounts. We calculate the proportion of net worth invested at the discount broker as the beginning value of a household’s common stock investments scaled by its self-reported net worth.<sup>24</sup> We then analyze the turnover and investment performance of 2,333 households with at least 50 percent of their net worth in common stock investments at this discount broker. These households have similar turnover (6.25 percent per month, 75 percent annually) to our full sample (see Table I). Furthermore, these households earn gross and net returns that are very similar to the full sample. The monthly net return, own-benchmark abnormal return, market-adjusted return, CAPM intercept, and Fama–French intercept for these households are 1.285,  $-0.173$ ,  $-0.135$ ,  $-0.221$ , and  $-0.285$  percent, respectively.

Finally, it is worth noting that the negative relation between turnover and net returns that we document for individual investors also exists in mutual funds (Carhart (1997)). It is unlikely that mutual fund managers buy and sell stocks for the pure joys of trading despite the fact that this trading lowers the expected returns of their shareholders.<sup>25</sup>

## VII. Conclusion

We analyze the returns earned on common stock investments by 66,465 households at a large discount brokerage firm for the six years ending in January 1997. We document that the gross returns (before accounting for transaction costs) earned by these households are quite ordinary, on average. Unfortunately, the net returns (after accounting for the bid-ask spread and commissions paid by these investors) earned by these households are poor. The average household underperforms a value-weighted market index by about 9 basis points per month (or 1.1 percent annually). After accounting for the fact that the average household tilts its common stock investments toward small value stocks with high market risk, the underperformance averages 31 basis points per month (or 3.7 percent annually). The average household turns over approximately 75 percent of its common stock portfolio annually. The poor performance of the average household can be traced to the costs associated with this high level of trading.

<sup>24</sup> This estimate is upwardly biased because the account opening date generally precedes our first portfolio position observation and net worth is likely to have increased in the interim.

<sup>25</sup> Lakonishok et al. (1992) report a positive relation between turnover and performance for 769 all-equity pension funds, though this finding puzzles the authors.

Our most dramatic empirical evidence is provided by the 20 percent of households that trade most often. With average monthly turnover of in excess of 20 percent, these households turn their common stock portfolios over more than twice annually. The gross returns earned by these high-turnover households are unremarkable, and their net returns are anemic. The net returns lag a value-weighted market index by 46 basis points per month (or 5.5 percent annually). After a reasonable accounting for the fact that the average high-turnover household tilts its common stock investments toward small value stocks with high market risk, the underperformance averages 86 basis points per month (or 10.3 percent annually).

The investment experience of individual investors is remarkably similar to the investment experience of mutual funds. As do individual investors, the average mutual fund underperforms a simple market index (Jensen (1969) and Malkiel (1995)). Mutual funds trade often and their trading hurts performance (Carhart (1997)). But trading by individual investors is even more deleterious to performance because individuals execute small trades and face higher proportional commission costs than mutual funds.

Our main point is simple: Trading is hazardous to your wealth. Why then do investors trade so often? The aggregate turnover of the individual investor portfolios we analyze is about 70 percent; the average turnover is about 75 percent. The New York Stock Exchange reports that the annual turnover of stocks listed on the exchange hovered around 50 percent during our sample period. Mutual funds average an annual turnover of 77 percent (Carhart (1997)). We believe that these high levels of trading can be at least partly explained by a simple behavioral bias: People are overconfident, and overconfidence leads to too much trading.

Based on rational agents free from such behavioral biases, the efficient markets hypothesis has been central to both the theory and practice of investment management. The efficiency research posits that private information is rare. Thus, active investment strategies will not outperform passive investment strategies. Both the theoretical and empirical work on efficiency supporting this view have led to a rise of passive investment strategies that simply buy and hold diversified portfolios (Fama (1991)).

Behavioral finance models that incorporate investor overconfidence (e.g., Odean (1998b)) provide an even stronger prediction: Active investment strategies will underperform passive investment strategies. Overconfident investors will overestimate the value of their private information, causing them to trade too actively and, consequently, to earn below-average returns. Consistent with these behavioral models of investor overconfidence, we provide empirical evidence that households, which hold about half of U.S. equities, trade too much, on average. Those who trade the most are hurt the most.

### **Appendix A. The Analysis of Trade Timing**

In this appendix, we analyze the timing of purchases and sales within a month. The timing of trades within a month is ignored in our main analysis where we assume all purchases and sales are made at month end.

**Table AI**  
**The Gross Abnormal Returns for Stocks Bought and Sold**  
**from the Trade Date to the End of the Month**

The sample is account records for 66,465 households at a large discount brokerage firm from January 1991 to December 1996. Purchase turnover is the average value of stocks purchased divided by the average value of stocks held in each month. The purchase abnormal return is calculated by compounding the daily returns on the purchased security from the day following the purchase to the end of the month less the compound return on the value-weighted NYSE/AMEX/Nasdaq market index. Sales turnover and sales abnormal return are analogously calculated. The estimated effect on the monthly abnormal return is the purchase turnover times the purchase abnormal return minus the sale turnover times the sale abnormal return.

Consistent with the results reported in Odean (1999), we document that the stocks investors buy subsequently underperform the stocks they sell. In aggregate, we estimate that an exact accounting for the timing of purchases and sales would reduce the performance of individual investors by more than two basis points per month (or approximately 0.29 percent annually).

For each account with a beginning-of-month position statement in month  $t$ , we identify all purchases in month  $t - 1$  and sales in month  $t$ . For both purchases and sales, we calculate the compound return on the stock from the day following the trade to the last day of the month. For purchases this return is excluded from our main results; for sales this return is included. Note that in our main results, we account for the intraday return on the trade day in our estimate of the bid-ask spread.

**Figure A1. Time line of returns calculations.** The time of purchase (sale) is  $t_b$  ( $t_s$ ). The close on the purchase (sale) day is  $t_b^{cl}$  ( $t_s^{cl}$ ). The close on the last day of the purchase (sale) month is  $t_1$  ( $t_3$ ).

The results of our analysis are presented in Table AI. The second (fourth) columns of this table present aggregate purchase (sale) turnover calculated as the aggregate dollar value of purchases (sales) divided by the aggregate dollar value of positions held. (This turnover measure is slightly different from that used in the main text, where turnover is calculated based on market values contained in position statements and is thus capped at 100 percent per month for each household.) Abnormal returns are calculated for purchases and sales by subtracting the compound return on the CRSP NYSE/AMEX/Nasdaq value-weighted index. The trade-weighted mean abnormal returns are presented in columns 3 (for purchases) and 5 (for sales) of Table AI. In aggregate (Panel A), from the day following the trade to the end of the month, the stocks that investors buy underperform the value-weighted market index by 47 basis points, and those they sell outperform the index by two basis points. Based on these abnormal returns and our estimates of aggregate turnover, we calculate that the results we present in the main text overestimate the performance of individual investors by 2.42 basis points per month.

We also analyze the timing of trades by partitioning households on the basis of account size (Panel B) and turnover (Panel C). In each of the sample partitions, the timing of their trades hurts investors. In short, the results in the main text overestimate the performance of individual investors by ignoring the exact timing of purchases and sales.

Consider how the accounting for the exact timing of trades relates to the return calculations contained in the main text. In Figure A1, we present an example of a security that is purchased in month 1 and sold in month 3. A time line for these transactions is depicted in Figure A1.

In the main text, we calculate the return for this security from  $t_1$  to  $t_3$ . In this appendix, we calculate the return from timing as the return from  $t_b^{cl}$  to  $t_1$  minus the return from  $t_s^{cl}$  to  $t_s$ . Our estimate of the bid-ask spread is the return from  $t_s$  to  $t_s^{cl}$  minus the return from  $t_b$  to  $t_b^{cl}$ . When the return from timing is added to the main calculation and the spread is subtracted, one gets the (approximate) return from  $t_b$  to  $t_s$ , the period in which the investor held the stock.

## **Appendix B. The Analysis of Intramonth Trades**

In this appendix, we analyze the performance of stocks that are bought and then sold within a calendar month (e.g., purchased on January 3 and sold on January 10). These intramonth trades are excluded from our main analyses, since those analyses are based on monthly position statements. In aggregate, we estimate that intramonth trades would improve the performance of individual investors by less than one basis point per month (or approximately 0.06 percent annually). Though profitable, the aggregate value of intramonth trades accounts for less than one percent of the aggregate value of positions held.

For each account, we identify all purchases followed by a sale within the same month. In accounting for multiple purchases and sales, we assume that the first securities purchased are the first sold. Over our 72-month sample period, we identify 87,095 round-trip intramonth trades worth approximately \$27 million per month, on average. In contrast, the average beginning-of-month value of positions held, which we analyze in the main text, is over \$2.7 billion.

We calculate the gross returns on these round-trip transactions using the CRSP daily return files assuming the security is purchased and sold at the close of trading on the purchase and sale dates, respectively. We calculate the net returns on these round-trip transactions by subtracting estimates of the bid-ask spread and commissions as is done in the main text for the case of monthly returns. The average round-trip trade involves a purchase of \$22,275, is held for 6.16 days, and costs 2.08 percent in commissions and 0.30 percent for the bid-ask spread. (In aggregate, these round-trip trades cost 0.87 percent in commissions and 0.27 percent for the bid-ask spread.) Note that the bid-ask spread is lower than that documented for trades that we analyze in the main text, which have an average round-trip bid-ask spread of one percent (see Table I). This lower spread is likely a result of the intraday return earned by investors from the transaction price through the end of the trading day (which is included in our estimate of the spread) rather than a smaller bid-ask spread for these intramonth trades.

In Table BI, we summarize our analysis of the gross and net returns earned on intramonth trades. In this table, we calculate market-adjusted abnormal returns by subtracting the daily value-weighted NYSE/AMEX/Nasdaq CRSP market index from the return earned on each intramonth trade. Both the gross and net abnormal returns in this table are weighted by the size of each trade, so that we can estimate the aggregate impact of these intramonth trades on the performance of individual investors.

Panel A presents results for all households. In aggregate, the intramonth trades earn impressive gross abnormal returns of 1.64 percent. The net abnormal returns are 0.50 percent. Since these intramonth trades average 0.99 percent of the average value of positions held, we estimate that these intramonth trades would improve the performance of individual investors by 0.49 basis points per month (0.0050 times 0.0099) in aggregate. This small improvement in performance does not affect any of the conclusions that we present in the main text.

**Table BI****The Gross and Net Abnormal Returns earned on Intramonth Trades**

The sample is account records for 66,465 households at a large discount brokerage firm from January 1991 to December 1996. The gross abnormal return on intramonth trades is calculated as the compound return from the day following the purchase to the day of the sale less the compound return on a value-weighted NYSE/AMEX/Nasdaq index. The net abnormal return is the gross abnormal return adjusted for the return earned on the day of the purchase or sale, the bid-ask spread, and the commission cost. The intramonth trades as a percentage of total position value are the average monthly value of intramonth purchases divided by the average monthly value of all stocks held. The estimated effect on monthly abnormal return is the net abnormal return times the intramonth trades as a percentage of total position value.

| Sample                                                      | Mean Trade Size | Gross Abnormal Return (%) | Net Abnormal Return (%) | Intramonth Trades as a Percentage of Total Position Value | Estimated Change in Monthly Abnormal Return (%) |
|-------------------------------------------------------------|-----------------|---------------------------|-------------------------|-----------------------------------------------------------|-------------------------------------------------|

| 3                                                           | 11,886          | 1.843                     | 0.220                   | 0.08                                                      | 0.0002                                          |
| 4                                                           | 13,838          | 2.925                     | 1.378                   | 0.36                                                      | 0.0050                                          |
| 5 (High)                                                    | 23,702          | 1.545                     | 0.451                   | 6.92                                                      | 0.0312                                          |

We also analyze the profitability of intramonth trades by partitioning households on the basis of account size (Panel B) and turnover (Panel C). In short, none of these results are so dramatic that they would lead us to qualify any of the results that we present in our main text. Those who benefit most from intramonth trades are those who trade most. Their intramonth trades improve their performance by 3.12 basis points per month (last row and last column of Panel C). Yet, we estimate that these investors underperform by a whopping 86 basis points per month (last row, Table V).

In conclusion, we emphasize that the positive net returns earned on intramonth trades do not necessarily imply that individual investors have superior short-term trading ability. If investors have a disposition to sell winning investments and ride losing investments (as proposed by Shefrin and Statman (1985)), we would expect to observe positive abnormal returns on short-term round-trip trades.

Hey Matt,

You mentioned Barber and Odean at the meeting last Friday. Is this (attached) the paper you were thinking of?

Thanks,  
Keith

Hi Matt,

We are available for the Thursday time slot (June 20<sup>th</sup>, 9-10am). I'll send out an Outlook invite. Who else should be on it on your side?

On our last phone call, you had mentioned that you would compile some written comments based on your and Jennifer's reactions to our draft. Would you be able to send those before the phone call?

Please send our thanks to Lourdes for the examples of referring to indexes.

Thanks,  
Keith

**Subject:** FW: index information and future call

Dear DOL,

Are you available from 9 to 10 on either Wednesday or Thursday of next week for a phone call?

Thanks

Matthew

**Subject:** index information and future call

Dear DOL,

As a follow up to our call a few weeks ago, we have some references for you regarding specifying indices in rulemaking (all thanks should go to Lourdes). The references are below my email signature.

We also would like to set up a call with you regarding the records BDs maintain. Are there times next week or the week after that you are available?

Thanks

In the product definitions adopting release regarding swaps (see attached), the Commission discussed the nature of security indexes in general (see pp. 48285-6). However, we did not address whether specific indexes are broad or narrow-based, under the definitions of swap and security-based swap jointly adopted by the Commission and the CFTC.

---

Please check Sections 3 and 6 of Chapter XIV in the following link that should lead you to NASDAQ's index options standards:

<http://nasdaq.cchwallstreet.com/NASDAQTools/PlatformViewer.asp?selectednode=chp%5F1%5F1%5F14&manual=%2Fnasdaq%2Fmain%2Fnasdaq%2Doptionsrules%2F>

I've cut and pasted these Sections below as well. You'll notice that the criteria may differ, depending on the specific underlying index (MSCI) named in the rule:

**Sec. 3 Designation of a Broad-Based Index**

(a) The component securities of an index underlying a broad-based index option contract need not meet the requirements of Section 3 of Chapter IV of these Rules (Criteria for Underlying Securities). Except as set forth in subparagraph (b) below, the listing of a class of index options on a broad-based index requires the filing of a proposed rule change to be approved by the SEC under Section 19(b) of the Exchange Act.

(b) NOM may trade options on a broad-based index pursuant to Rule 19b-4(e) of the Securities Exchange Act of 1934, if each of the following conditions is satisfied:

- (1) The index is broad-based, as defined in Section 2(j) of this Chapter;
- (2) Options on the index are designated as A.M.-settled;
- (3) The index is capitalization-weighted, modified capitalization weighted, price-weighted, or equal dollar-weighted;
- (4) The index consists of 50 or more component securities;
- (5) Component securities that account for at least ninety-five percent (95%) of the weight of the index have a market capitalization of at least \$75 million, except that component securities that account for at least sixty-five percent (65%) of the weight of the index have a market capitalization of at least \$100 million;
- (6) Component securities that account for at least eighty percent (80%) of the weight of the index satisfy the requirements of Section 3 of Chapter IV applicable to individual underlying securities;
- (7) Each component security that accounts for at least one percent (1%) of the weight of the index has an average daily trading volume of at least 90,000 shares during the last six month period;

- (8) No single component security accounts for more than ten percent (10%) of the weight of the index, and the five highest weighted component securities in the index do not, in the aggregate, account for more than thirty-three percent (33%) of the weight of the index;
  - (9) Each component security must be an "NMS stock" as defined in Rule 600 of Regulation NMS under the Exchange Act;
  - (10) Non-U.S. component securities (stocks or ADRs) that are not subject to comprehensive surveillance agreements do not, in the aggregate, represent more than twenty percent (20%) of the weight of the index;
  - (11) The current index value is widely disseminated at least once every fifteen (15) seconds by OPRA, CTA/CQ, NIDS or one or more major market data vendors during the time options on the index are traded on NOM;
  - (12) NOM reasonably believes it has adequate system capacity to support the trading of options on the index, based on a calculation of NOM's current Independent System Capacity Advisor allocation and the number of new messages per second expected to be generated by options on such index;
  - (13) An equal dollar-weighted index is rebalanced at least once every calendar quarter;
  - (14) If an index is maintained by a broker-dealer, the index is calculated by a third-party who is not a broker-dealer, and the broker-dealer has erected an informational barrier around its personnel who have access to information concerning changes in, and adjustments to, the index;
  - (15) NOM has written surveillance procedures in place with respect to surveillance of trading of options on the index.
- (c) The following maintenance listing standards shall apply to each class of index options originally listed pursuant to paragraph (b) above:
- (1) The requirements set forth in subparagraphs (b)(1) - (b)(3) and (b)(9) - (b)(15) must continue to be satisfied. The requirements set forth in subparagraphs (b)(5) - (b)(8) must be satisfied only as of the first day of January and July in each year;
  - (2) The total number of component securities in the index may not increase or decrease by more than ten percent (10%) from the number of component securities in the index at the time of its initial listing. In the event a class of index options listed on NOM fails to satisfy the maintenance listing standards set forth herein, NOM shall not open for trading any additional series of options of that class unless the continued listing of that class of index options has been approved by the SEC under Section 19(b) (2) of the Exchange Act.
- (d) MSCI EM Index
- (i) NOM may trade options on the MSCI EM Index if each of the following conditions is satisfied:
    - (1) The index is broad-based, as defined in Chapter XIV, Section 2(j);
    - (2) Options on the index are designated as P.M.-settled index options;
    - (3) The index is capitalization-weighted, price-weighted, modified capitalization-weighted or equal dollar-weighted;
    - (4) The index consists of 500 or more component securities;
    - (5) All of the component securities of the index will have a market capitalization of greater than \$100 million;
    - (6) No single component security accounts for more than fifteen percent (15%) of the weight of the index, and the five highest weighted component securities in the index do not, in the aggregate, account for more than fifty percent (50%) of the weight of the MSCI EM Index;
    - (7) Non-U.S. component securities (stocks or ADRs) that are not subject to comprehensive surveillance agreements do not, in the aggregate, represent more than twenty-two and a half percent (22.5%) of the weight of the index;
    - (8) The current index value is widely disseminated at least once every fifteen (15) seconds by one or more major market data vendors during the time options on the index are traded on NOM;
    - (9) NOM reasonably believes it has adequate system capacity to support the trading of options on the index, based on a calculation of NOM's current Independent System Capacity Advisor (ISCA) allocation and the number of new messages per second expected to be generated by options on such index; and
    - (10) NOM has written surveillance procedures in place with respect to surveillance of

trading of options on the index.

(ii) The following maintenance listing standards shall apply to each class of index options originally listed pursuant to paragraph (d).

- (1) The conditions set forth in subparagraphs (d)(i) (1), (2), (3), (4), (7) (8), (9) and (10) must continue to be satisfied. The conditions set forth in subparagraphs (d)(i) (5) and (6) must be satisfied only as of the first day of January and July in each year;
- (2) The total number of component securities in the index may not increase or decrease by more than thirty-five percent (35%) from the number of component securities in the index at the time of its initial listing.

In the event a class of index options listed on NOM fails to satisfy the maintenance listing standards set forth herein, NOM shall not open for trading any additional series of options of that class unless the continued listing of that class of index options has been approved by the Commission under Section 19(b)(2) of the Exchange Act.

(e) MSCI EAFE Index

(i) NOM may trade options on the MSCI EAFE Index if each of the following conditions is satisfied:

- (1) The index is broad-based, as defined in Chapter XIV, Section 2(j);
- (2) Options on the index are designated as P.M.-settled index options;
- (3) The index is capitalization-weighted, price-weighted, modified capitalization-weighted or equal dollar-weighted;
- (4) The index consists of 500 or more component securities;
- (5) All of the component securities of the index will have a market capitalization of greater than \$100 million;
- (6) No single component security accounts for more than fifteen percent (15%) of the weight of the index, and the five highest weighted component securities in the index do not, in the aggregate, account for more than fifty percent (50%) of the weight of the MSCI EAFE Index;
- (7) Non-U.S. component securities (stocks or ADRs) that are not subject to comprehensive surveillance agreements do not, in the aggregate, represent more than twenty percent (20%) of the weight of the index;
- (8) The current index value is widely disseminated at least once every fifteen (15) seconds by one or more major market data vendors during the time options on the index are traded on NOM;
- (9) NOM reasonably believes it has adequate system capacity to support the trading of options on the index, based on a calculation of the NOM's current Independent System Capacity Advisor (ISCA) allocation and the number of new messages per second expected to be generated by options on such index; and
- (10) NOM has written surveillance procedures in place with respect to surveillance of trading of options on the index.

(ii) The following maintenance listing standards shall apply to each class of index options originally listed pursuant to paragraph (e).

- (1) The conditions set forth in subparagraphs (e)(i) (1), (2), (3), (4), (7) (8), (9) and (10) must continue to be satisfied. The conditions set forth in subparagraphs (e)(i) (5) and (6) must be satisfied only as of the first day of January and July in each year;
- (2) The total number of component securities in the index may not increase or decrease by more than thirty-five percent (35%) from the number of component securities in the index at the time of its initial listing.

In the event a class of index options listed on NOM fails to satisfy the maintenance listing standards set forth herein, NOM shall not open for trading any additional series of options of that class unless the continued listing of that class of index options has been approved by the Commission under Section 19(b)(2) of the Exchange Act.

\* \* \* \* \*

## **Sec. 6 Designation of Narrow-Base and Micro-Narrow-Based Index Options**

(a) The component securities of an index underlying a narrow-based index option contract need not meet the requirements of Section 3 of Chapter IV of these Rules (Criteria for Underlying Securities). Except as set forth in subparagraph (b) below, the listing of a class of index options on a narrow-based index requires the filing of a proposed rule change to be approved by the SEC under Section 19(b) of the Exchange Act.

(b) *Narrow-Based Index*. NOM may trade options on a narrow-based index pursuant to Rule 19b-4(e) of the 1934 Act, if each of the following conditions is satisfied:

- (1) The options are designated as A.M.-settled index options;
- (2) The index is capitalization-weighted, price-weighted, equal dollar-weighted, or modified capitalization-weighted, and consists of ten or more component securities;
- (3) Each component security has a market capitalization of at least \$75 million, except that for each of the lowest weighted component securities in the index that in the aggregate account for no more than 10% of the weight of the index, the market capitalization is at least \$50 million;
- (4) Trading volume of each component security has been at least one million shares for each of the last six months, except that for each of the lowest weighted component securities in the index that in the aggregate account for no more than 10% of the weight of the index, trading volume has been at least 500,000 shares for each of the last six months;
- (5) In a capitalization-weighted index or a modified capitalization-weighted index, the lesser of the five highest weighted component securities in the index or the highest weighted component securities in the index that in the aggregate represent at least 30% of the total number of component securities in the index each have had an average monthly trading volume of at least 2,000,000 shares over the past six months;
- (6) No single component security represents more than 30% of the weight of the index, and the five highest weighted component securities in the index do not in the aggregate account for more than 50% (65% for an index consisting of fewer than 25 component securities) of the weight of the index;
- (7) Component securities that account for at least 90% of the weight of the index and at least 80% of the total number of component securities in the index satisfy the requirements of Chapter IV, Section 3 applicable to individual underlying securities;
- (8) Each component security must be an "NMS stock" as defined in Rule 600 of Regulation NMS of the Securities Exchange Act of 1934.
- (9) Non-U.S. component securities (stocks or ADRs) that are not subject to comprehensive surveillance agreements do not in the aggregate represent more than 20% of the weight of the index;
- (10) The current underlying index value will be reported at least once every fifteen seconds during the time the index options are traded on the Exchange;
- (11) An equal dollar-weighted index will be rebalanced at least once every calendar quarter; and
- (12) If an underlying index is maintained by a broker-dealer, the index is calculated by a third party who is not a brokerdealer, and the broker-dealer has erected a "Chinese Wall" around its personnel who have access to information concerning changes in and adjustments to the index.

(c) *Maintenance Criteria*. The following maintenance listing standards shall apply to each class of index options originally listed pursuant to subsection (b) above:

- (1) The requirements stated in subsections (b)(1), (3), (6), (7), (8), (9), (10), (11) and (12) must continue to be satisfied, provided that the requirements stated in subparagraph (b)(6) must be satisfied only as of the first day of January and July in each year;
- (2) The total number of component securities in the index may not increase or decrease by more than 33 1/3% from the number of component securities in the index at the time of its initial listing, and in no event may be less than nine component securities;
- (3) Trading volume of each component security in the index must be at least 500,000 shares for each of the last six months, except that for each of the lowest weighted component securities in the index that in the aggregate account for no more than 10% of the weight of the index, trading volume must be at least 400,000 shares for each of the last six months;
- (4) In a capitalization-weighted index or a modified capitalization-weighted index, the lesser of the five highest weighted component securities in the index or the highest weighted component securities in the index that in the aggregate represent at least 30% of the total number of stocks in the index each have had an average monthly trading volume of at least 1,000,000 shares over the past six months.

In the event a class of index options listed on NOM fails to satisfy the maintenance listing standards set forth herein, NOM shall not open for trading any additional series of options of that class unless such failure is determined by NOM not to be significant and the Commission concurs in that determination, or unless the continued listing of that class of index options has been approved by the Commission under Section 19(b)(2) of the Exchange Act.

(d) Notwithstanding paragraph (a) above, NOM may trade options on a Micro Narrow-Based security index pursuant to Rule 19b-4(e) of the 1934 Act, if each of the following condition is satisfied:

- (1) The Index is a security index:
  - (i) that has 9 or fewer component securities; or
  - (ii) in which a component security comprises more than 30 percent of the index's weighting; or
  - (iii) in which the 5 highest weighted component securities in the aggregate comprise more than 60 percent of the index's weighting; or
  - (iv) in which the lowest weighted component securities comprising, in the aggregate, 25 percent of the index's weighting have an aggregate dollar value of average daily trading volume of less than \$50,000,000 (or in the case of an index with 15 or more component securities, \$30,000,000) except that if there are two or more securities with equal weighting that could be included in the calculation of the lowest weighted component securities comprising, in the aggregate, 25 percent of the index's weighting, such securities shall be ranked from lowest to highest dollar value of average daily trading volume and shall be included in the calculation based on their ranking starting with the lowest ranked security;
- (2) The index is capitalization-weighted, modified capitalization-weighted, price-weighted, share weighted, equal dollarweighted, approximate equal-dollar weighted, or modified equal-dollar weighted;
  - (i) For the purposes of this paragraph (d), an approximate equal-dollar weighted index is composed of one or more securities in which each component security will be weighted equally based on its market price on the index's selection date and the index must be reconstituted and rebalanced if the notional value of the largest component is at least twice the notional volume of the smallest component for fifty percent or more of the trading days in the three months prior to December 31 of each year. For purposes of this provision the "notional value" is the market price of the component times the number of shares of the underlying component in the index. Reconstitution and rebalancing are also mandatory if the number of

components in the index is greater than five at the time of rebalancing. NOM reserves the right to rebalance quarterly at its discretion.

(ii) For the purposes of this paragraph (d), a modified equal-dollar weighted index is an index in which each underlying component represents a pre-determined weighting percentage of the entire index. Each component is assigned a weight that takes into account the relative market capitalization of the securities comprising the index. A modified equal-dollar weighted index will be balanced quarterly.

(iii) For the purposes of this paragraph (d), a share-weighted index is calculated by multiplying the price of the component security by an adjustment factor. Adjustment factors are chosen to reflect the investment objective deemed appropriate by the designer of the index and will be published by the Exchange as part of the contract specifications. The value of the index is calculated by adding the weight of each component security and dividing the total by an index divisor, calculated to yield a benchmark index level as of a particular date. A share-weighted index is not adjusted to reflect changes in the number of outstanding shares of its components. A share-weighted Micro Narrow-Based index will not be rebalanced. If a share-weighted Micro Narrow-Based Index fails to meet the maintenance listing standards under Subsection (e) of this rule, NOM will restrict trading in existing option series to closing transactions and will not issue additional series for that index.

(iv) NOM may rebalance any Micro Narrow-Based index on an interim basis if warranted as a result of extraordinary changes in the relative values of the component securities. To the extent investors with open positions must rely upon the continuity of the options contract on the index, outstanding contracts are unaffected by rebalancings.

(3) Each component security in the index has a minimum market capitalization of at least \$75 million, except that each of the lowest weighted securities in the index that in the aggregate account for no more than 10% of the weight of the index may have a minimum market capitalization of only \$50 million;

(4) The average daily trading volume in each of the preceding six months for each component security in the index is at least 45,500 shares, except that each of the lowest weighted component securities in the index that in the aggregate account for no more than 10% of the weight of the index may have an average daily trading volume of only 22,750 shares for each of the last six months;

(5) In a capitalization-weighted index, the lesser of: (1) the five highest weighted component securities in the index each have had an average daily trading volume of at least 90,000 shares over the past six months; or (2) the highest weighted component securities in the index that in the aggregate represent at least 30% of the total number of component securities in the index each have had an average daily trading volume of at least 90,000 shares over the past six months;

(6) Subject to subparagraphs (4) and (5) above, the component securities that account for at least 90% of the total index weight and at least 80% of the total number of component securities in the index must meet the requirements applicable to individual underlying securities;

(7)

(i) Each component security in the index is a "reported security" as defined in Rule 600 of Regulation NMS under the Exchange Act; and

(ii) Foreign securities or ADRs that are not subject to comprehensive surveillance sharing agreements do not represent more than 20% of the weight of the index;

(8) The current underlying index value will be reported at least once every fifteen seconds during the time the index options are traded on NOM;

- (9) An equal dollar-weighted index will be rebalanced at least once every quarter;
- (10) If the underlying index is maintained by a broker-dealer, the index is calculated by a third party who is not a brokerdealer, and the broker-dealer has in place an information barrier around its personnel who have access to information concerning changes in and adjustments to the index;
- (11) Each component security in the index is registered pursuant to Section 12 of the Exchange Act; and
- (12) Cash settled index options are designated as A.M.-settled options.
- (e) The following maintenance listing standards shall apply to each class of index options originally listed pursuant to paragraph (d) above:
- (1) The index meets the criteria of paragraph (d)(1) of this Rule;
- (2) Subject to subparagraphs (9) and (10) below, the component securities that account for at least 90% of the total index weight and at least 80% of the total number of component securities in the index must meet the requirements of Section 3 of Chapter IV.
- (3) Each component security in the index has a market capitalization of at least \$75 million, except that each of the lowest weighted component securities that in the aggregate account for no more than 10% of the weight of the index may have a market capitalization of only \$50 million;
- (4) Each component security must be an "NMS stock" as defined in Rule 600 of Regulation NMS under the Exchange Act; and
- (5) Foreign securities or ADRs thereon that are not subject to comprehensive surveillance sharing agreements do not represent more than 20% of the weight of the index;
- (6) The current underlying index value will be reported at least once every fifteen seconds during the time the index options are traded on NOM;
- (7) If the underlying index is maintained by a broker-dealer, the index is calculated by a third party who is not a brokerdealer, and the broker-dealer has in place an information barrier around its personnel who have access to information concerning changes in and adjustments to the index;
- (8) The total number of component securities in the index may not increase or decrease by more than 33 1/3% from the number of component securities in the index at the time of its initial listing;
- (9) Trading volume of each component security in the index must be at least 500,000 shares for each of the last six months, except that for each of the lowest weighted component securities in the index that in the aggregate account for no more than 10% of the weight of the index, trading volume must be at least 400,000 shares for each of the last six months;
- (10) In a capitalization-weighted index and a modified capitalization-weighted index, the lesser of the five highest weighted component securities in the index or the highest weighted component securities in the index that in the aggregate represent at least 30% of the total number of stocks in the index each have had an average monthly trading volume of at least 1,000,000 shares over the past six months;
- (11) Each component security in the index is registered pursuant to Section 12 of the Exchange Act;
- (12) In an approximate equal-dollar weighted index, the index must be reconstituted and rebalanced if the notional value of the largest component is at least twice the notional volume

of the smallest component for fifty percent or more of the trading days in the three months prior to December 31 of each year. For purposes of this provision the "notional value" is the market price of the component times the number of shares of the underlying component in the index. Reconstitution and rebalancing are also mandatory if the number of components in the index is greater than five at the time of rebalancing. NOM reserves the right to rebalance quarterly at its discretion;

(13) In a modified equal-dollar weighted index NOM will rebalance the index quarterly;

(14) In a share-weighted index, if a share-weighted Micro Narrow-Based Index fails to meet the maintenance listing standards under paragraph (e) of this Section NOM will not rebalance the index, will restrict trading in existing option series to closing transactions, and will not issue additional series for that index; and

(15) In the event a class of index options listed on NOM fails to satisfy the maintenance listing standards set forth herein, NOM shall not open for trading any additional series of options of that class unless such failure is determined by NOM not to be significant and the Commission concurs in that determination, or unless the continued listing of that class of index options has been approved by the Commission under Section 19(b)(2) of the 1934 Act.

Dear Keith,

Please invite Lourdes, Suzanne McGovern, and myself. I am not sure whether we will have written comments by then.

Matthew Kozora, PhD

**Subject:** RE: index information and future call

Hi Matt,

We are available for the Thursday time slot (June 20<sup>th</sup>, 9-10am). I'll send out an Outlook invite. Who else should be on it on your side?

On our last phone call, you had mentioned that you would compile some written comments based on your and Jennifer's reactions to our draft. Would you be able to send those before the phone call?

Please send our thanks to Lourdes for the examples of referring to indexes.

Thanks,  
Keith

Dear DOL,

Are you available from 9 to 10 on either Wednesday or Thursday of next week for a phone call?

Thanks

Matthew

Dear DOL,

As a follow up to our call a few weeks ago, we have some references for you regarding specifying indices in rulemaking (all thanks should go to Lourdes). The references are below my email signature.

We also would like to set up a call with you regarding the records BDs maintain. Are there times next week or the week after that you are available?

Thanks

In the product definitions adopting release regarding swaps (see attached), the Commission discussed the nature of security indexes in general (see pp. 48285-6). However, we did not address whether specific indexes are broad or narrow-based, under the definitions of swap and security-based swap jointly adopted by the Commission and the CFTC.

---

Please check Sections 3 and 6 of Chapter XIV in the following link that should lead you to NASDAQ's index options standards:

<http://nasdaq.cchwallstreet.com/NASDAQTools/PlatformViewer.asp?selectednode=chp%5F1%5F1%5F14&manual=%2Fnasdaq%2Fmain%2Fnasdaq%2Doptionsrules%2F>

I've cut and pasted these Sections below as well. You'll notice that the criteria may differ, depending on the specific underlying index (MSCI) named in the rule:

### Sec. 3 Designation of a Broad-Based Index

(a) The component securities of an index underlying a broad-based index option contract need not meet the requirements of Section 3 of Chapter IV of these Rules (Criteria for Underlying Securities). Except as set forth in subparagraph (b) below, the listing of a class of index options on a broad-based index requires the filing of a proposed rule change to be approved by the SEC under Section 19(b) of the Exchange Act.

(b) NOM may trade options on a broad-based index pursuant to Rule 19b-4(e) of the Securities Exchange Act of 1934, if each of the following conditions is satisfied:

- (1) The index is broad-based, as defined in Section 2(j) of this Chapter;
- (2) Options on the index are designated as A.M.-settled;
- (3) The index is capitalization-weighted, modified capitalization weighted, price-weighted, or equal dollar-weighted;
- (4) The index consists of 50 or more component securities;
- (5) Component securities that account for at least ninety-five percent (95%) of the weight of the index have a market capitalization of at least \$75 million, except that component securities that account for at least sixty-five percent (65%) of the weight of the index have a market capitalization of at least \$100 million;
- (6) Component securities that account for at least eighty percent (80%) of the weight of the index satisfy the requirements of Section 3 of Chapter IV applicable to individual underlying securities;
- (7) Each component security that accounts for at least one percent (1%) of the weight of the index has an average daily trading volume of at least 90,000 shares during the last six month period;
- (8) No single component security accounts for more than ten percent (10%) of the weight of the index, and the five highest weighted component securities in the index do not, in the aggregate, account for more than thirty-three percent (33%) of the weight of the index;
- (9) Each component security must be an "NMS stock" as defined in Rule 600 of Regulation NMS under the Exchange Act;
- (10) Non-U.S. component securities (stocks or ADRs) that are not subject to comprehensive surveillance agreements do not, in the aggregate, represent more than twenty percent (20%) of the weight of the index;
- (11) The current index value is widely disseminated at least once every fifteen (15) seconds by OPRA, CTA/CQ, NIDS or one or more major market data vendors during the time options on the index are traded on NOM;
- (12) NOM reasonably believes it has adequate system capacity to support the trading of options on the index, based on a calculation of NOM's current Independent System Capacity Advisor allocation and the number of new messages per second expected to be generated by options on such index;
- (13) An equal dollar-weighted index is rebalanced at least once every calendar quarter;
- (14) If an index is maintained by a broker-dealer, the index is calculated by a third-party who is not a broker-dealer, and the broker-dealer has erected an informational barrier around its personnel who have access to information concerning changes in, and adjustments to, the index;
- (15) NOM has written surveillance procedures in place with respect to surveillance of trading of options on the index.

(c) The following maintenance listing standards shall apply to each class of index options originally listed pursuant to paragraph (b) above:

- (1) The requirements set forth in subparagraphs (b)(1) - (b)(3) and (b)(9) - (b)(15) must continue to be satisfied. The requirements set forth in subparagraphs (b)(5) - (b)(8) must be satisfied only as of the first day of January and July in each year;
- (2) The total number of component securities in the index may not increase or decrease by more than ten percent (10%) from the number of component securities in the index at the time of its initial listing. In the event a class of index options listed on NOM fails to satisfy the maintenance listing standards set forth herein, NOM shall not open for trading any additional series of options of that class unless the continued listing of that class of index options has been approved by the SEC under Section 19(b) (2) of the Exchange Act.

(d) MSCI EM Index

- (i) NOM may trade options on the MSCI EM Index if each of the following conditions is

satisfied:

- (1) The index is broad-based, as defined in Chapter XIV, Section 2(j);
  - (2) Options on the index are designated as P.M.-settled index options;
  - (3) The index is capitalization-weighted, price-weighted, modified capitalization-weighted or equal dollar-weighted;
  - (4) The index consists of 500 or more component securities;
  - (5) All of the component securities of the index will have a market capitalization of greater than \$100 million;
  - (6) No single component security accounts for more than fifteen percent (15%) of the weight of the index, and the five highest weighted component securities in the index do not, in the aggregate, account for more than fifty percent (50%) of the weight of the MSCI EM Index;
  - (7) Non-U.S. component securities (stocks or ADRs) that are not subject to comprehensive surveillance agreements do not, in the aggregate, represent more than twenty-two and a half percent (22.5%) of the weight of the index;
  - (8) The current index value is widely disseminated at least once every fifteen (15) seconds by one or more major market data vendors during the time options on the index are traded on NOM;
  - (9) NOM reasonably believes it has adequate system capacity to support the trading of options on the index, based on a calculation of NOM's current Independent System Capacity Advisor (ISCA) allocation and the number of new messages per second expected to be generated by options on such index; and
  - (10) NOM has written surveillance procedures in place with respect to surveillance of trading of options on the index.
- (ii) The following maintenance listing standards shall apply to each class of index options originally listed pursuant to paragraph (d).
- (1) The conditions set forth in subparagraphs (d)(i) (1), (2), (3), (4), (7) (8), (9) and (10) must continue to be satisfied. The conditions set forth in subparagraphs (d)(i) (5) and (6) must be satisfied only as of the first day of January and July in each year;
  - (2) The total number of component securities in the index may not increase or decrease by more than thirty-five percent (35%) from the number of component securities in the index at the time of its initial listing.

In the event a class of index options listed on NOM fails to satisfy the maintenance listing standards set forth herein, NOM shall not open for trading any additional series of options of that class unless the continued listing of that class of index options has been approved by the Commission under Section 19(b)(2) of the Exchange Act.

(e) MSCI EAFE Index

- (i) NOM may trade options on the MSCI EAFE Index if each of the following conditions is satisfied:
- (1) The index is broad-based, as defined in Chapter XIV, Section 2(j);
  - (2) Options on the index are designated as P.M.-settled index options;
  - (3) The index is capitalization-weighted, price-weighted, modified capitalization-weighted or equal dollar-weighted;
  - (4) The index consists of 500 or more component securities;
  - (5) All of the component securities of the index will have a market capitalization of greater than \$100 million;
  - (6) No single component security accounts for more than fifteen percent (15%) of the weight of the index, and the five highest weighted component securities in the index do not, in the aggregate, account for more than fifty percent (50%) of the weight of the MSCI EAFE Index;
  - (7) Non-U.S. component securities (stocks or ADRs) that are not subject to comprehensive surveillance agreements do not, in the aggregate, represent more than twenty percent (20%) of the weight of the index;
  - (8) The current index value is widely disseminated at least once every fifteen (15) seconds by one or more major market data vendors during the time options on the index are traded on NOM;
  - (9) NOM reasonably believes it has adequate system capacity to support the trading of

- options on the index, based on a calculation of the NOM's current Independent System Capacity Advisor (ISCA) allocation and the number of new messages per second expected to be generated by options on such index; and
- (10) NOM has written surveillance procedures in place with respect to surveillance of trading of options on the index.
- (ii) The following maintenance listing standards shall apply to each class of index options originally listed pursuant to paragraph (e).
- (1) The conditions set forth in subparagraphs (e)(i) (1), (2), (3), (4), (7) (8), (9) and (10) must continue to be satisfied. The conditions set forth in subparagraphs (e)(i) (5) and (6) must be satisfied only as of the first day of January and July in each year;
- (2) The total number of component securities in the index may not increase or decrease by more than thirty-five percent (35%) from the number of component securities in the index at the time of its initial listing.
- In the event a class of index options listed on NOM fails to satisfy the maintenance listing standards set forth herein, NOM shall not open for trading any additional series of options of that class unless the continued listing of that class of index options has been approved by the Commission under Section 19(b)(2) of the Exchange Act.

\* \* \* \* \*

## **Sec. 6 Designation of Narrow-Base and Micro-Narrow-Based Index Options**

- (a) The component securities of an index underlying a narrow-based index option contract need not meet the requirements of Section 3 of Chapter IV of these Rules (Criteria for Underlying Securities). Except as set forth in subparagraph (b) below, the listing of a class of index options on a narrow-based index requires the filing of a proposed rule change to be approved by the SEC under Section 19(b) of the Exchange Act.
- (b) *Narrow-Based Index.* NOM may trade options on a narrow-based index pursuant to Rule 19b-4(e) of the 1934 Act, if each of the following conditions is satisfied:
- (1) The options are designated as A.M.-settled index options;
- (2) The index is capitalization-weighted, price-weighted, equal dollar-weighted, or modified capitalization-weighted, and consists of ten or more component securities;
- (3) Each component security has a market capitalization of at least \$75 million, except that for each of the lowest weighted component securities in the index that in the aggregate account for no more than 10% of the weight of the index, the market capitalization is at least \$50 million;
- (4) Trading volume of each component security has been at least one million shares for each of the last six months, except that for each of the lowest weighted component securities in the index that in the aggregate account for no more than 10% of the weight of the index, trading volume has been at least 500,000 shares for each of the last six months;
- (5) In a capitalization-weighted index or a modified capitalization-weighted index, the lesser of the five highest weighted component securities in the index or the highest weighted component securities in the index that in the aggregate represent at least 30% of the total number of component securities in the index each have had an average monthly trading volume of at least 2,000,000 shares over the past six months;
- (6) No single component security represents more than 30% of the weight of the index, and the five highest weighted component securities in the index do not in the aggregate account for more than 50% (65% for an index consisting of fewer than 25 component securities) of the weight of the index;
- (7) Component securities that account for at least 90% of the weight of the index and at least

80% of the total number of component securities in the index satisfy the requirements of Chapter IV, Section 3 applicable to individual underlying securities;

(8) Each component security must be an "NMS stock" as defined in Rule 600 of Regulation NMS of the Securities Exchange Act of 1934.

(9) Non-U.S. component securities (stocks or ADRs) that are not subject to comprehensive surveillance agreements do not in the aggregate represent more than 20% of the weight of the index;

(10) The current underlying index value will be reported at least once every fifteen seconds during the time the index options are traded on the Exchange;

(11) An equal dollar-weighted index will be rebalanced at least once every calendar quarter; and

(12) If an underlying index is maintained by a broker-dealer, the index is calculated by a third party who is not a brokerdealer, and the broker-dealer has erected a "Chinese Wall" around its personnel who have access to information concerning changes in and adjustments to the index.

(c) *Maintenance Criteria.* The following maintenance listing standards shall apply to each class of index options originally listed pursuant to subsection (b) above:

(1) The requirements stated in subsections (b)(1), (3), (6), (7), (8), (9), (10), (11) and (12) must continue to be satisfied, provided that the requirements stated in subparagraph (b)(6) must be satisfied only as of the first day of January and July in each year;

(2) The total number of component securities in the index may not increase or decrease by more than 33 1/3% from the number of component securities in the index at the time of its initial listing, and in no event may be less than nine component securities;

(3) Trading volume of each component security in the index must be at least 500,000 shares for each of the last six months, except that for each of the lowest weighted component securities in the index that in the aggregate account for no more than 10% of the weight of the index, trading volume must be at least 400,000 shares for each of the last six months;

(4) In a capitalization-weighted index or a modified capitalization-weighted index, the lesser of the five highest weighted component securities in the index or the highest weighted component securities in the index that in the aggregate represent at least 30% of the total number of stocks in the index each have had an average monthly trading volume of at least 1,000,000 shares over the past six months.

In the event a class of index options listed on NOM fails to satisfy the maintenance listing standards set forth herein, NOM shall not open for trading any additional series of options of that class unless such failure is determined by NOM not to be significant and the Commission concurs in that determination, or unless the continued listing of that class of index options has been approved by the Commission under Section 19(b)(2) of the Exchange Act.

(d) Notwithstanding paragraph (a) above, NOM may trade options on a Micro Narrow-Based security index pursuant to Rule 19b-4(e) of the 1934 Act, if each of the following condition is satisfied:

(1) The Index is a security index:

(i) that has 9 or fewer component securities; or

(ii) in which a component security comprises more than 30 percent of the index's weighting; or

(iii) in which the 5 highest weighted component securities in the aggregate comprise more

than 60 percent of the index's weighting; or

(iv) in which the lowest weighted component securities comprising, in the aggregate, 25 percent of the index's weighting have an aggregate dollar value of average daily trading volume of less than \$50,000,000 (or in the case of an index with 15 or more component securities, \$30,000,000) except that if there are two or more securities with equal weighting that could be included in the calculation of the lowest weighted component securities comprising, in the aggregate, 25 percent of the index's weighting, such securities shall be ranked from lowest to highest dollar value of average daily trading volume and shall be included in the calculation based on their ranking starting with the lowest ranked security;

(2) The index is capitalization-weighted, modified capitalization-weighted, price-weighted, share weighted, equal dollarweighted, approximate equal-dollar weighted, or modified equal-dollar weighted;

(i) For the purposes of this paragraph (d), an approximate equal-dollar weighted index is composed of one or more securities in which each component security will be weighted equally based on its market price on the index's selection date and the index must be reconstituted and rebalanced if the notional value of the largest component is at least twice the notional value of the smallest component for fifty percent or more of the trading days in the three months prior to December 31 of each year. For purposes of this provision the "notional value" is the market price of the component times the number of shares of the underlying component in the index. Reconstitution and rebalancing are also mandatory if the number of components in the index is greater than five at the time of rebalancing. NOM reserves the right to rebalance quarterly at its discretion.

(ii) For the purposes of this paragraph (d), a modified equal-dollar weighted index is an index in which each underlying component represents a pre-determined weighting percentage of the entire index. Each component is assigned a weight that takes into account the relative market capitalization of the securities comprising the index. A modified equal-dollar weighted index will be balanced quarterly.

(iii) For the purposes of this paragraph (d), a share-weighted index is calculated by multiplying the price of the component security by an adjustment factor. Adjustment factors are chosen to reflect the investment objective deemed appropriate by the designer of the index and will be published by the Exchange as part of the contract specifications. The value of the index is calculated by adding the weight of each component security and dividing the total by an index divisor, calculated to yield a benchmark index level as of a particular date. A share-weighted index is not adjusted to reflect changes in the number of outstanding shares of its components. A share-weighted Micro Narrow-Based index will not be rebalanced. If a share-weighted Micro Narrow-Based Index fails to meet the maintenance listing standards under Subsection (e) of this rule, NOM will restrict trading in existing option series to closing transactions and will not issue additional series for that index.

(iv) NOM may rebalance any Micro Narrow-Based index on an interim basis if warranted as a result of extraordinary changes in the relative values of the component securities. To the extent investors with open positions must rely upon the continuity of the options contract on the index, outstanding contracts are unaffected by rebalancings.

(3) Each component security in the index has a minimum market capitalization of at least \$75 million, except that each of the lowest weighted securities in the index that in the aggregate account for no more than 10% of the weight of the index may have a minimum market capitalization of only \$50 million;

(4) The average daily trading volume in each of the preceding six months for each component security in the index is at least 45,500 shares, except that each of the lowest weighted component securities in the index that in the aggregate account for no more than 10% of the weight of the index may have an average daily trading volume of only 22,750 shares for each

of the last six months;

(5) In a capitalization-weighted index, the lesser of: (1) the five highest weighted component securities in the index each have had an average daily trading volume of at least 90,000 shares over the past six months; or (2) the highest weighted component securities in the index that in the aggregate represent at least 30% of the total number of component securities in the index each have had an average daily trading volume of at least 90,000 shares over the past six months;

(6) Subject to subparagraphs (4) and (5) above, the component securities that account for at least 90% of the total index weight and at least 80% of the total number of component securities in the index must meet the requirements applicable to individual underlying securities;

(7)

(i) Each component security in the index is a "reported security" as defined in Rule 600 of Regulation NMS under the Exchange Act; and

(ii) Foreign securities or ADRs that are not subject to comprehensive surveillance sharing agreements do not represent more than 20% of the weight of the index;

(8) The current underlying index value will be reported at least once every fifteen seconds during the time the index options are traded on NOM;

(9) An equal dollar-weighted index will be rebalanced at least once every quarter;

(10) If the underlying index is maintained by a broker-dealer, the index is calculated by a third party who is not a broker-dealer, and the broker-dealer has in place an information barrier around its personnel who have access to information concerning changes in and adjustments to the index;

(11) Each component security in the index is registered pursuant to Section 12 of the Exchange Act; and

(12) Cash settled index options are designated as A.M.-settled options.

(e) The following maintenance listing standards shall apply to each class of index options originally listed pursuant to paragraph (d) above:

(1) The index meets the criteria of paragraph (d)(1) of this Rule;

(2) Subject to subparagraphs (9) and (10) below, the component securities that account for at least 90% of the total index weight and at least 80% of the total number of component securities in the index must meet the requirements of Section 3 of Chapter IV.

(3) Each component security in the index has a market capitalization of at least \$75 million, except that each of the lowest weighted component securities that in the aggregate account for no more than 10% of the weight of the index may have a market capitalization of only \$50 million;

(4) Each component security must be an "NMS stock" as defined in Rule 600 of Regulation NMS under the Exchange Act; and

(5) Foreign securities or ADRs thereon that are not subject to comprehensive surveillance sharing agreements do not represent more than 20% of the weight of the index;

(6) The current underlying index value will be reported at least once every fifteen seconds during the time the index options are traded on NOM;

(7) If the underlying index is maintained by a broker-dealer, the index is calculated by a third

party who is not a brokerdealer, and the broker-dealer has in place an information barrier around its personnel who have access to information concerning changes in and adjustments to the index;

- (8) The total number of component securities in the index may not increase or decrease by more than 33 1/3% from the number of component securities in the index at the time of its initial listing;
- (9) Trading volume of each component security in the index must be at least 500,000 shares for each of the last six months, except that for each of the lowest weighted component securities in the index that in the aggregate account for no more than 10% of the weight of the index, trading volume must be at least 400,000 shares for each of the last six months;
- (10) In a capitalization-weighted index and a modified capitalization-weighted index, the lesser of the five highest weighted component securities in the index or the highest weighted component securities in the index that in the aggregate represent at least 30% of the total number of stocks in the index each have had an average monthly trading volume of at least 1,000,000 shares over the past six months;
- (11) Each component security in the index is registered pursuant to Section 12 of the Exchange Act;
- (12) In an approximate equal-dollar weighted index, the index must be reconstituted and rebalanced if the notional value of the largest component is at least twice the notional volume of the smallest component for fifty percent or more of the trading days in the three months prior to December 31 of each year. For purposes of this provision the "notional value" is the market price of the component times the number of shares of the underlying component in the index. Reconstitution and rebalancing are also mandatory if the number of components in the index is greater than five at the time of rebalancing. NOM reserves the right to rebalance quarterly at its discretion;
- (13) In a modified equal-dollar weighted index NOM will rebalance the index quarterly;
- (14) In a share-weighted index, if a share-weighted Micro Narrow-Based Index fails to meet the maintenance listing standards under paragraph (e) of this Section NOM will not rebalance the index, will restrict trading in existing option series to closing transactions, and will not issue additional series for that index; and
- (15) In the event a class of index options listed on NOM fails to satisfy the maintenance listing standards set forth herein, NOM shall not open for trading any additional series of options of that class unless such failure is determined by NOM not to be significant and the Commission concurs in that determination, or unless the continued listing of that class of index options has been approved by the Commission under Section 19(b)(2) of the 1934 Act.

Hi Matt,

We'd like to have you over to DOL to present your paper. If you're interested, perhaps we can get together for lunch and talk about details.

Keith

Dear Keith,

Please see the following link to research that I posted last week. The research shows a possible relationship between standards of conduct under which advice is given to retail investors and the sale of investment grade municipal bonds.

[http://papers.ssrn.com/sol3/papers.cfm?abstract\\_id=2323519](http://papers.ssrn.com/sol3/papers.cfm?abstract_id=2323519)

I want to make clear that the research is my own, and does not reflect the views of the Commission or of my colleagues, including those in Division of Trading and Markets and Division of Investment Management.

### Financial Literacy Seminar Series

---

Please join us for a Financial Literacy Seminar Series (FLSS) session on **Thursday, October 24** presented by **Julie Agnew** of the College of William and Mary. She will discuss her upcoming paper, "**Judging the Quality of Financial Advice: The Good, the Bad, and the Adviser.**" You can read the abstract by clicking [here](#).

The FLSS will be hosted at the George Washington School of Business, Duquès Hall, Room 651, from **3:00 to 4:30pm**. A reception will follow from 4:30 to 5:30pm in the Dean's Reception Area on the 6th floor.

**Please note the seminar will now begin at 3pm.**

[PLEASE CLICK HERE TO RSVP.](#)

SAVE THE DATES for our upcoming seminars:

- November 7, James Choi, Yale University
- November 21, William Skimmyhorn, United States Military Academy
- December 5, Richard Burkhauser, Cornell University

The FLSS is a joint initiative of the Federal Reserve Board (FRB) and the Global Financial Literacy Excellence Center (GFLEC) at the George Washington School of Business (GWSB). In the fall term, the seminars convene every other Thursday at GWSB. Additional information about the seminar series and directions to GWSB are provided on our website at <http://business.gwu.edu/flss/>. Please contact us at [REDACTED]@gwu.edu if you have questions about the FLSS.

We look forward to seeing you on Thursday, October 24.

---

Hi Matt,

In their response to the SEC's 2013 RFI on the Fiduciary Standard, SIFMA suggested possible costs for complying with a Uniform Fiduciary Standard. The numbers were only based on a survey of 18 large SIFMA members. I am being asked how those costs could apply to small firms. Do you have any information on the distribution of compliance costs across firm size? The comparison does not necessarily need to be between BD firms, but could be other firm types.

Thanks,  
James

**Date:** Friday, April 25, 2014 11:20:00 AM

---

Hi Bonnie,

I have a follow-up question. Below you sent me a link to a commission release. On page 212 of the release is a table of the number of broker-dealers by the amount of capital from the FOCUS Report. I wanted to make sure I was correct in my interpretation of the data. Are independent broker-dealers included in the count, or are they just counted as part of the affiliated firm, for example of the independent dealers that work with LPL are they counted under LPL for a total of 1 or are they each counted individually.

Thanks,  
James

**Subject:** RE: Broker-dealer numbers

I am looking for the number of broker-dealers registered with the Commission as of 12/31/2013 (the comparable to the 4,612 that were registered as of 12/31/2012).

For the revenue numbers, it was for Regulatory Flexibility Act requirements, so the suggested releases from the Commission should be helpful.

Thanks for your help,  
Allan

**Subject:** RE: Broker-dealer numbers

Mr. Beckmann,

As you can see from the below back and forth with Daniel, he asked for different broker-dealer statistics at different times.

I'm not sure what the release you are working on is about.

Are you only looking for the number of broker-dealers registered with the Commission as of 12/31/2013?

On the revenue numbers, broker-dealers' FOCUS reports and the data contained therein is confidential.

If you are looking for information to address the Regulatory Flexibility Act requirements, Dan and I spoke of this last March. At that time, I suggested that he look at and possibly cite to one of the Commission's releases (see attachment). Since that time the Commission has published other releases that contain more up-to-date information. For instance, you could review this one - <http://www.sec.gov/rules/final/2013/34-70073.pdf>.

Bonnie.

Hi Bonnie,

You communicated with my colleague Dan Puskin last year regarding some broker-dealer registration statistics. Dan has left the office, and I've taken over some of his responsibilities. Do you have updated data for 2013 (or more recent) of the number of

broker-dealers registered with the SEC? Additionally, do you have data on the broker-dealer revenue? Would it be possible to determine the number of broker-dealers with less than \$7 million in annual revenue?

Thanks,  
Allan Beckmann

Hi Dan!

I believe the answer to both of these questions is no.  
First, what is the definition of "discount broker?" A lot of people use that term, but I don't believe there is one definition. Also, I don't believe it is a question the Commission asks on any of its forms. I also don't believe there is a way to easily isolate those BDs that might be associated with insurance companies. While the SEC probably receives information in this regard, it would not be in a format that would be searchable.

Sorry!

Bonnie

**Subject:** RE: Broker-dealer numbers

Hi Dan!

The study you point to was issued by the Commission on January 22, 2011. On page 8 of this study, the Commission states, "Currently, the Commission oversees approximately 5,100 broker-dealers<sup>11</sup>..."

The corresponding footnote reads, "Unless otherwise specified, the statistics in Section II.A.2 are based on data derived from broker-dealers' responses to questions on the Uniform Application for Broker-Dealer Registration ("Form BD") reported through the Central Registration Depository ("CRD") as of September 30, 2010...."

I would highlight here that the text and footnote indicate that the number of broker-dealers is both "approximate," and based on data collected by the Commission "as of September 30, 2010."

In October, I provided you with data on the number of broker-dealers registered with the Commission as of the calendar years ending December, 2010 and December, 2011.

I hope this addresses your concerns.

**Cc:** Beckmann, Allan - EBSA  
**Subject:** RE: Broker-dealer numbers

Dear Dan,

Perhaps I am mistaken, but I didn't read Bonnie's message to mean that the BD number is overstated; I read it to mean that to get the data you were looking for you should reduce the number of Forms BD and Forms BDW filed to account for duplicate filings. I believe you can rely on her 4,813 number as the correct number of total number of BDs.

I'm not sure what the 5,100 number is based on. Would it be OK to wait until Bonnie returns on Monday and she can ask the person who gave her the other statistics? Perhaps that person knows.

Thanks,

Margaret

Dear Ms. Smith,

The only number we need is the total number of broker-dealers. The 5,100 Broker-Dealers estimate in the Dodd-Frank report is based on 2009 numbers. If there was an updated estimate for the total number of broker dealers, that would be very helpful. Here is a link to the version of the report we've been looking at:

[www.sec.gov/news/studies/2011/913studyfinal.pdf](http://www.sec.gov/news/studies/2011/913studyfinal.pdf)

All the best,  
Daniel

**Sent:** Thursday, December 27, 2012 4:58 PM  
**To:** TradingAndMarkets  
**Cc:** Beckmann, Allan - EBSA  
**Subject:** RE: Broker-dealer numbers

Thank you so much for your help in October. The statistics on new broker-dealers have been very useful! I now have a follow up question. In SEC's Dodd-Frank report (*Study on Investment Advisers and Broker-Dealers*), there is a passage that reads as follows:

*“Broker-Dealers: The Commission and FINRA oversee approximately 5,100 broker-dealers. As of the end of 2009, FINRA-registered broker-dealers held over 109 million retail and institutional accounts. Approximately 18% of FINRA-registered broker-dealers also are registered as investment advisers with the Commission or a state. Most broker-dealers receive transaction-based compensation.”*

Is it possible to get more updated numbers for the total number of broker-dealers based on 2011 or 2012 submissions?

Happy Holidays,  
Daniel

**Sent:** Friday, October 05, 2012 4:00 PM  
**To:** Puskin, Dan - EBSA  
**Subject:** Broker-dealer numbers

Hi Daniel!

I guess we don't keep track of the number of new BDs registered and the number of BDs that exited – instead we keep track of the number of Forms BD (to initiate registration) and BDW (to withdraw from registration) filed.

These numbers are as follows:

Forms BD filed in the calendar year ending 12/31/2009 - 337

Forms BD filed in the calendar year ending 12/31/2010 - 285

Forms BD filed in the calendar year ending 12/31/2011 - 216

Forms BDW filed in the calendar year ending 12/31/2009 - 285

Forms BDW filed in the calendar year ending 12/31/2010 - 549

Forms BDW filed in the calendar year ending 12/31/2011 – 378

These would include possible duplicate filings (deficient Forms BDW where the firm was required to re-file the Form, and BD apps that were never accepted or were withdrawn before they started business). The expert here who deals with these filings suggests reducing the number of Forms BD by 5% and the number of Forms BDW by 10% to account for these duplicates.

As you are an economist, I am providing the raw numbers and the suggested reductions to allow you the ability to either retain the raw number or reduce the raw numbers, as suggested.

In addition, the total number of broker-dealers and the number of small broker-dealers registered with the Commission as of 12/31/2009, 12/31/2010, and 12/31/2011 were 5,257 and 927, 5,061 and 841, and 4,813 and 808, respectively.

I hope this is helpful to you.

Have a terrific weekend!

Mr. Beckmann,

As you can see from the below back and forth with Daniel, he asked for different broker-dealer statistics at different times.

I'm not sure what the release you are working on is about.

Are you only looking for the number of broker-dealers registered with the Commission as of 12/31/2013?

On the revenue numbers, broker-dealers' FOCUS reports and the data contained therein is confidential.

If you are looking for information to address the Regulatory Flexibility Act requirements, Dan and I spoke of this last March. At that time, I suggested that he look at and possibly cite to one of the Commission's releases (see attachment). Since that time the Commission has published other releases that contain more up-to-date information. For instance, you could review this one - <http://www.sec.gov/rules/final/2013/34-70073.pdf>.

Bonnie.

Hi Bonnie,

You communicated with my colleague Dan Puskin last year regarding some broker-dealer registration statistics. Dan has left the office, and I've taken over some of his responsibilities. Do you have updated data for 2013 (or more recent) of the number of broker-dealers registered with the SEC? Additionally, do you have data on the broker-dealer revenue? Would it be possible to determine the number of broker-dealers with less than \$7 million in annual revenue?

Thanks,  
Allan Beckmann

Hi Dan!

I believe the answer to both of these questions is no.

First, what is the definition of "discount broker?" A lot of people use that term, but I don't believe there is one definition. Also, I don't believe it is a question the Commission asks on any of its forms. I also don't believe there is a way to easily isolate those BDs that might be associated with insurance companies. While the SEC probably receives information in this regard, it would not be in a format that would be searchable.

Sorry!

Bonnie

**To:** Puskin, Dan - EBSA

**Subject:** Broker-dealer numbers

Hi Daniel!

I guess we don't keep track of the number of new BDs registered and the number of BDs that exited – instead we keep track of the number of Forms BD (to initiate registration) and BDW (to withdraw from registration) filed.

These numbers are as follows:

Forms BD filed in the calendar year ending 12/31/2009 - 337

Forms BD filed in the calendar year ending 12/31/2010 - 285

Forms BD filed in the calendar year ending 12/31/2011 - 216

Forms BDW filed in the calendar year ending 12/31/2009 - 285

Forms BDW filed in the calendar year ending 12/31/2010 - 549

Forms BDW filed in the calendar year ending 12/31/2011 – 378

These would include possible duplicate filings (deficient Forms BDW where the firm was required to re-file the Form, and BD apps that were never accepted or were withdrawn before they started business). The expert here who deals with these filings suggests reducing the number of Forms BD by 5% and the number of Forms BDW by 10% to account for these duplicates.

As you are an economist, I am providing the raw numbers and the suggested reductions to allow you the ability to either retain the raw number or reduce the raw numbers, as suggested.

In addition, the total number of broker-dealers and the number of small broker-dealers registered with the Commission as of 12/31/2009, 12/31/2010, and 12/31/2011 were 5,257 and 927, 5,061 and 841, and 4,813 and 808, respectively.

I hope this is helpful to you.

Have a terrific weekend!

Hi Bonnie,

You communicated with my colleague Dan Puskin last year regarding some broker-dealer registration statistics. Dan has left the office, and I've taken over some of his responsibilities. Do you have updated data for 2013 (or more recent) of the number of broker-dealers registered with the SEC? Additionally, do you have data on the broker-dealer revenue? Would it be possible to determine the number of broker-dealers with less than \$7 million in annual revenue?

Thanks,  
Allan Beckmann

**Subject:** RE: Broker-dealer numbers

Hi Dan!

I believe the answer to both of these questions is no. First, what is the definition of "discount broker?" A lot of people use that term, but I don't believe there is one definition. Also, I don't believe it is a question the Commission asks on any of its forms. I also don't believe there is a way to easily isolate those BDs that might be associated with insurance companies. While the SEC probably receives information in this regard, it would not be in a format that would be searchable.

Sorry!

**Cc:** Beckmann, Allan - EBSA  
**Subject:** RE: Broker-dealer numbers

Hi Dan!

The study you point to was issued by the Commission on January 22, 2011. On page 8 of this study, the Commission states, "Currently, the Commission oversees approximately 5,100 broker-dealers<sup>11</sup>..."

The corresponding footnote reads, "Unless otherwise specified, the statistics in Section II.A.2 are based on data derived from broker-dealers' responses to questions on the Uniform Application for Broker-Dealer Registration ("Form BD") reported through the Central Registration Depository ("CRD") as of September 30, 2010..."

I would highlight here that the text and footnote indicate that the number of broker-dealers is both "approximate," and based on data collected by the Commission "as of September 30, 2010."

In October, I provided you with data on the number of broker-dealers registered with the Commission as of the calendar years ending December, 2010 and December, 2011.

I hope this addresses your concerns.

Dear Ms. Smith,

The only number we need is the total number of broker-dealers. The 5,100 Broker-Dealers estimate in the Dodd-Frank report is based on 2009 numbers. If there was an updated estimate for the total number of broker dealers, that would be very helpful. Here is a link to the version of the report we've been looking at:

[www.sec.gov/news/studies/2011/913studyfinal.pdf](http://www.sec.gov/news/studies/2011/913studyfinal.pdf)

All the best,  
Daniel

**Sent:** Thursday, December 27, 2012 4:58 PM  
**To:** TradingAndMarkets  
**Cc:** Beckmann, Allan - EBSA  
**Subject:** RE: Broker-dealer numbers

Thank you so much for your help in October. The statistics on new broker-dealers have been very useful! I now have a follow up question. In SEC's Dodd-Frank report (*Study on Investment Advisers and Broker-Dealers*), there is a passage that reads as follows:

*"Broker-Dealers: The Commission and FINRA oversee approximately 5,100 broker-dealers. As of the end of 2009, FINRA-registered broker-dealers held over 109 million retail and institutional*

accounts. Approximately 18% of FINRA-registered broker-dealers also are registered as investment advisers with the Commission or a state. Most broker-dealers receive transaction-based compensation.”

Is it possible to get more updated numbers for the total number of broker-dealers based on 2011 or 2012 submissions?

Happy Holidays,  
Daniel

Daniel Puskin, PhD  
Economist

**From:** TradingAndMarkets [REDACTED]@SEC.GOV]  
**Sent:** Friday, October 05, 2012 4:00 PM  
**To:** Puskin, Dan - EBSA  
**Subject:** Broker-dealer numbers

Hi Daniel!

I guess we don't keep track of the number of new BDs registered and the number of BDs that exited – instead we keep track of the number of Forms BD (to initiate registration) and BDW (to withdraw from registration) filed.

These numbers are as follows:

Forms BD filed in the calendar year ending 12/31/2009 - 337

Forms BD filed in the calendar year ending 12/31/2010 - 285

Forms BD filed in the calendar year ending 12/31/2011 - 216

Forms BDW filed in the calendar year ending 12/31/2009 - 285

Forms BDW filed in the calendar year ending 12/31/2010 - 549

Forms BDW filed in the calendar year ending 12/31/2011 – 378

These would include possible duplicate filings (deficient Forms BDW where the firm was required to re-file the Form, and BD apps that were never accepted or were withdrawn before they started business). The expert here who deals with these filings suggests reducing the number of Forms BD by 5% and the number of Forms BDW by 10% to account for these duplicates.

As you are an economist, I am providing the raw numbers and the suggested reductions to allow you the ability to either retain the raw number or reduce the raw numbers, as suggested.

In addition, the total number of broker-dealers and the number of small broker-dealers registered with the Commission as of 12/31/2009, 12/31/2010, and 12/31/2011 were 5,257 and 927, 5,061

and 841, and 4,813 and 808, respectively.

I hope this is helpful to you.

Have a terrific weekend!

James,

I've been informed that the best place to find investment adviser data is the FOIA adviser spreadsheets at <http://www.sec.gov/foia/docs/invafoia.htm>. These spreadsheets are updated every month and the regulatory assets under management of each adviser are on the spreadsheet (Item 5.F.(20)(C) or column CV on the current spreadsheet). I understand the most recent spreadsheets likely have the information you are looking for.

I'm pretty sure that we do not have a similar table assets and revenue of broker-dealers as in the table you highlighted, however I have not received a definitive answer from the staff on that piece. One thing I'd like to point out is that broker-dealers generally do not have or provide any data on "assets under management." That is an investment adviser concept.

Mr. Beckmann,

As you can see from the below back and forth with Daniel, he asked for different broker-dealer statistics at different times.

I'm not sure what the release you are working on is about.

Are you only looking for the number of broker-dealers registered with the Commission as of 12/31/2013?

On the revenue numbers, broker-dealers' FOCUS reports and the data contained therein is confidential.

If you are looking for information to address the Regulatory Flexibility Act requirements, Dan and I spoke of this last March. At that time, I suggested that he look at and possibly cite to one of the Commission's releases (see attachment). Since that time the Commission has published other releases that contain more up-to-date information. For instance, you could review this one - <http://www.sec.gov/rules/final/2013/34-70073.pdf>.

Bonnie.

Dear Margaret,

In the statistics sent by Bonnie Gauch, she mentions that the BD number is overstated (see her message below). Is the 5,100 used in the Dodd-Frank report based on the 5,061 filers from 2010 or

is it based on an adjustment to the 5,257 number in 2009.

Thanks for all your help!

Dan

**To:** TradingAndMarkets  
**Cc:** Beckmann, Allan - EBSA  
**Subject:** RE: Broker-dealer numbers

Thank you so much for your help in October. The statistics on new broker-dealers have been very useful! I now have a follow up question. In SEC's Dodd-Frank report (*Study on Investment Advisers and Broker-Dealers*), there is a passage that reads as follows:

*"Broker-Dealers: The Commission and FINRA oversee approximately 5,100 broker-dealers. As of the end of 2009, FINRA-registered broker-dealers held over 109 million retail and institutional accounts. Approximately 18% of FINRA-registered broker-dealers also are registered as investment advisers with the Commission or a state. Most broker-dealers receive transaction-based compensation."*

Is it possible to get more updated numbers for the total number of broker-dealers based on 2011 or 2012 submissions?

Happy Holidays,  
Daniel

**Sent:** Friday, October 05, 2012 4:00 PM  
**To:** Puskin, Dan - EBSA  
**Subject:** Broker-dealer numbers

Hi Daniel!

I guess we don't keep track of the number of new BDs registered and the number of BDs that exited – instead we keep track of the number of Forms BD (to initiate registration) and BDW (to withdraw from registration) filed.

These numbers are as follows:

Forms BD filed in the calendar year ending 12/31/2009 - 337

Forms BD filed in the calendar year ending 12/31/2010 - 285

Forms BD filed in the calendar year ending 12/31/2011 - 216

Forms BDW filed in the calendar year ending 12/31/2009 - 285

Forms BDW filed in the calendar year ending 12/31/2010 - 549

Forms BDW filed in the calendar year ending 12/31/2011 – 378

These would include possible duplicate filings (deficient Forms BDW where the firm was required to re-file the Form, and BD apps that were never accepted or were withdrawn before they started business). The expert here who deals with these filings suggests reducing the number of Forms BD by 5% and the number of Forms BDW by 10% to account for these duplicates.

As you are an economist, I am providing the raw numbers and the suggested reductions to allow you the ability to either retain the raw number or reduce the raw numbers, as suggested.

In addition, the total number of broker-dealers and the number of small broker-dealers registered with the Commission as of 12/31/2009, 12/31/2010, and 12/31/2011 were 5,257 and 927, 5,061 and 841, and 4,813 and 808, respectively.

I hope this is helpful to you.

Have a terrific weekend!

James,

I've been informed that the best place to find investment adviser data is the FOIA adviser spreadsheets at <http://www.sec.gov/foia/docs/invafoia.htm>. These spreadsheets are updated every month and the regulatory assets under management of each adviser are on the spreadsheet (Item 5.F.(20(C) or column CV on the current spreadsheet). I understand the most recent spreadsheets likely have the information you are looking for.

I'm pretty sure that we do not have a similar table assets and revenue of broker-dealers as in the table you highlighted, however I have not received a definitive answer from the staff on that piece. One thing I'd like to point out is that broker-dealers generally do not have or provide any data on "assets under management." That is an investment adviser concept.

Mr. Beckmann,

As you can see from the below back and forth with Daniel, he asked for different broker-dealer statistics at different times.

I'm not sure what the release you are working on is about.

Are you only looking for the number of broker-dealers registered with the Commission as of 12/31/2013?

On the revenue numbers, broker-dealers' FOCUS reports and the data contained therein is confidential.

If you are looking for information to address the Regulatory Flexibility Act requirements, Dan and I spoke of this last March. At that time, I suggested that he look at and possibly cite to one of the Commission's releases (see attachment). Since that time the Commission has published other releases that contain more up-to-date information. For instance, you could review this one - <http://www.sec.gov/rules/final/2013/34-70073.pdf>.

Bonnie.

Hi Bonnie,

You communicated with my colleague Dan Puskin last year regarding some broker-dealer registration statistics. Dan has left the office, and I've taken over some of his responsibilities. Do you have updated data for 2013 (or more recent) of the number of broker-dealers registered with the SEC? Additionally, do you have data on the broker-dealer revenue? Would it be possible to determine the number of broker-dealers with less than \$7 million in annual revenue?

Thanks,  
Allan Beckmann

**Subject:** RE: Broker-dealer numbers

Hi Dan!

I believe the answer to both of these questions is no. First, what is the definition of "discount broker?" A lot of people use that term, but I don't believe there is one definition. Also, I don't believe it is a question the Commission asks on any of its forms. I also don't believe there is a way to easily isolate those BDs that might be associated with insurance companies. While the SEC probably receives information in this regard, it would not be in a format that would be searchable.

Sorry!

Bonnie

**Cc:** Beckmann, Allan - EBSA  
**Subject:** RE: Broker-dealer numbers

Hi Dan!

The study you point to was issued by the Commission on January 22, 2011. On page 8 of this study, the Commission states, "Currently, the Commission oversees approximately 5,100 broker-dealers<sup>11</sup>..."

The corresponding footnote reads, "Unless otherwise specified, the statistics in Section II.A.2 are based on data derived from broker-dealers' responses to questions on the Uniform Application for Broker-Dealer Registration ("Form BD") reported through the Central Registration Depository ("CRD") as of September 30, 2010...."

I would highlight here that the text and footnote indicate that the number of broker-dealers is both "approximate," and based on data collected by the Commission "as of September 30, 2010."

In October, I provided you with data on the number of broker-dealers registered with the Commission as of the calendar years ending December, 2010 and December, 2011.

I hope this addresses your concerns.

Dear Dan,

Perhaps I am mistaken, but I didn't read Bonnie's message to mean that the BD number is overstated; I read it to mean that to get the data you were looking for you should reduce the number of Forms BD and Forms BDW filed to account for duplicate filings. I believe you can rely on her 4,813 number as the correct number of total number of BDs.

I'm not sure what the 5,100 number is based on. Would it be OK to wait until Bonnie returns on Monday and she can ask the person who gave her the other statistics? Perhaps that person knows.

Thanks,

Margaret

Hi Matt,

In their response to the SEC's 2013 RFI on the Fiduciary Standard, SIFMA suggested possible costs for complying with a Uniform Fiduciary Standard. The numbers were only based on a survey of 18 large SIFMA members. I am being asked how those costs could apply to small firms. Do you have any information on the distribution of compliance costs across firm size? The comparison does not necessarily need to be between BD firms, but could be other firm types.

Thanks,  
James

RETIREMENT SAVINGS

Thanks but No Thanks on 401(k) Advice

An increasing number of plans offer outside help, typically for a fee. So far, most participants aren't buying in.

By [KAREN BLUMENTHAL](#)

Amid volatile markets and concerns about how workers are investing their retirement savings, more 401(k) plans are offering participants

specific investment advice and even automatic account management to make investing decisions easier.

More employers are offering 401(k) investors access to outside portfolio advice. We look at [whether these services are catching on](#) and whether they are worth it.

That should be a good thing: Survey after survey shows that formal advice leads investors to increase their savings, diversify their holdings and continue holding stocks even when the market takes a plunge.

But here's the catch: Only about a quarter of the people who have access to advice through their retirement plans actually take advantage of it, according to retirement-plan providers and firms that provide advice services. And most of those who do use advisory services neglect to provide the personal details that would make the advice more valuable.

For many years, 401(k) and similar plans offered mostly education and "guidance," such as brochures, seminars and worksheets that gave employees generic suggestions about how to manage their accounts. Providing advice goes much further, offering specific recommendations about how much to invest in specific funds in your plan.

Janusz Kapusta

It also carries a fiduciary responsibility, or a requirement to put investors' interests first. Because of that, most advice services are offered by a company other than the investment firm that provides the 401(k) plan's fund offerings.

A recent survey of 820 profit-sharing and 401(k) plans by the nonprofit Plan Sponsor Council of America found that 58% offered investment advice in 2010, most commonly online services, one-on-one counseling and telephone hot lines. That was up from 47% of firms surveyed in 2005. Just over a third of the plans offered professional account management, up from 24% in 2005.

Among large companies, 74% now offer advice or managed accounts to plan participants, up from 50% in 2009, says benefits consultant Aon Hewitt.

Consultants and advice providers say more retirement plans are offering such services in part because recent market volatility has left many people unsure of what to do. "When times are tough, there's a bigger demand for advice," says Chris Lyon, partner at Rocaton Investment Advisors LLC, a Norwalk, Conn., investment-consulting firm.

In addition, as companies continue to shift to 401(k) plans from pension plans, it has become more apparent that many employees are ill-equipped to manage their own money. They may make costly decisions, such as moving out of stocks only after the market has tanked. Many older investors are too heavily invested in stocks or worse, their own company's stock, while some young workers avoid stocks altogether.

Poor investment decisions aren't tied to specific jobs or salaries, says Sue Walton, senior investment consultant for Towers Watson, a consulting firm. She says she's seen manufacturing companies where "some of the folks on the line make more savvy decisions than those in the executive suite."

If you are comfortable studying the various funds in your company plan, assessing the funds' expenses, building a diversified mix of choices and tweaking your choices once a year or so, you probably don't need advice. But for those who are less sure, here's a rundown of what's available:

**Managed accounts.** In most managed accounts, a professional money manager creates and monitors a customized investment portfolio for clients, usually wealthy investors, often for a fee of 1% or more of the assets under management. A managed account for a 401(k), by contrast, is limited to the investment options offered in the plan.

## Using 401(k) Help

Averages based on 425,000 people in eight 401(k) plans that offer both managed accounts and online advice

### ◆ Managed accounts

Age: 48.2 years

Account balance: \$66,202

Salary: \$55,457

Contributions: 6.9% of pay

### ◆ Online advice

Age: 40.9 years

Account balance: \$106,293

Salary: \$80,289

Contributions: 8.4% of pay

### ◆ Don't use help

Age: 45.4 years

Account balance: \$64,525

Salary: \$53,406

Contributions: 6.3% of pay

Source: "Help in Defined Contribution Plans: 2006 through 2010" by Financial Engines and Aon Hewitt

Typically, a sophisticated computer program considers your age and pay, expected retirement date, the size of your 401(k) and your contributions and then selects an appropriate allocation. The account is regularly rebalanced and adjusted as you age or when plan choices or market conditions change.

While a few plans pick up the cost of managed accounts, most people will pay fees of 0.2% to 0.6% of assets a year, or \$20 to \$60 for each \$10,000 invested, depending on how much is invested and what the company has negotiated. It's basically the equivalent of a personal trainer or a medically monitored diet for your retirement plan.

[Financial Engines](#) Inc., which provides advice to participants of 445 mostly large plans, says that about a half-million plan participants with almost \$44 billion in assets use its managed accounts, often those nearing retirement. [Morningstar](#) Inc.'s Investment Management division, which offers advice to about 150,000 plans, many of them small, manages the accounts of about 746,000 people with about \$19 billion in assets.

The service is most effective when it is truly customized. To get that, participants are asked to provide data about their investments outside the plan, such as other savings, old 401(k) plans or IRAs, and a spouse's earnings and retirement accounts. The problem is, most people don't provide all of that detail. And without it, "you're not going to get what you pay for," says Ms. Walton.

One-on-one help. If you want to manage your own account, you still may have the option of sitting down with an adviser or talking with someone on the phone who will consider your individual situation and help you create a plan. It will be up to you, however, to actually make the changes to your account and monitor it in the future.

TIAA-CREF, which provides plans to 15,000 institutions with 3.7 million participants, offers such counseling at no charge. It has 400 people based in local offices, an additional 200 who visit institutions where it offers plans and about 100 phone reps to provide such guidance.

People who take advantage of that one-on-one help are more likely to make positive changes in their savings or portfolios. Still, says James Nichols, a vice president who oversees TIAA-CREF's advice and planning, "one of the challenges is getting people to stay on track," especially as they age and their situations change.

Internet services. The widely available and free do-it-yourself service, where you plug your information into an online program offered by your plan and get recommendations back, is also the least used, according to a recent study by Financial Engines and Aon Hewitt, which looked at how participants in eight plans fared between 2006 and 2010. More than twice as many participants in the plans used managed accounts as used online services.

The investors most likely to go online and put in the effort to get recommendations typically had higher earnings, saved a higher percentage of their pay and had larger balances than those who used managed accounts. They also tended to be a bit younger than the managed-account users.

The general lack of interest in taking advantage of easily accessible online services underscores how hard it is to get participants to think

about and put some effort into their 401(k) investments.

"A large portion of participants are reluctant investors," says Christopher Jones, chief investment officer at Financial Engines. Retirement investing "is down on the priority list—people don't have the time for it, or the inclination."

Hi, everyone. I would like to coordinate a meeting for you to meet with our fiduciary working group here at the SEC. Together we can discuss some of the industry comments you've received about potential changes to a BD business model. We have a normal working group meeting at 10:00 on Tuesdays. If this time and day works for you, could you suggest two future dates that would accommodate your schedules? I will then check schedules here and confirm with you.

Thanks,

Jennifer

---

Joe,

I got your phone call. No worries there – I had already told the members of our working group who will be on the call that we want to hear as much as possible from the academics. We defer to your lead on the questions, and won't be overly talkative.

Thanks again for letting us participate!

Jennifer

Hi Matt:

It is going to take a little longer than I thought to get you these data. We originally thought it could be pulled directly from our Form 5500 Annual Report, but it turns out that it can't, so we are exploring alternatives. I will get in touch with you next week regarding this matter.

Thanks and have a great weekend!

Hi Matt,

We have spoken with approximately 20 academics.

From the phone calls you were on:

Andreas Hackethal, Anna Lusardi, Richard Evans, Eric Zitzewitz, George Loewenstein, Miles Livingston, Ohad Kadan, Javier Gil-Bazo, Antoinette Schoar, Mercer Bullard, Jonathan Reuter, Marco Ottaviani, Allan Ferrell and Brad Barber

Also have spoken with:

Matthew Morey, Daylain Cain, Alicia Munnell, Peter Tufano, Geoffrey Friesen and Roman Inderst

This is just a sampling of those who would have thoughts on the fiduciary topic. For example, coauthors of the listed authors would also be willing to discuss it. People have been very open to speaking with us--providing a range of useful insights and opinions on our work. Additionally, you might want to look at the itineraries of the Wharton Conference from 2012 (<http://www.pensionresearchcouncil.org/conferences/conf-2012.php>), the Rand Behavioral Finance Conference from last year and at this year's agenda as well as the NBER Behavioral Finance Working group, which met most recently last month in Chicago.

Best,

Dan

Hi Matt,

We are available for the Thursday time slot (June 20<sup>th</sup>, 9-10am). I'll send out an Outlook invite. Who else should be on it on your side?

On our last phone call, you had mentioned that you would compile some written comments based on your and Jennifer's reactions to our draft. Would you be able to send those before the phone call?

Please send our thanks to Lourdes for the examples of referring to indexes.

Thanks,  
Keith

---

In the product definitions adopting release regarding swaps (see attached), the Commission discussed the nature of security indexes in general (see pp. 48285-6). However, we did not address whether specific indexes are broad or narrow-based, under the definitions of swap and security-based swap jointly adopted by the Commission and the CFTC.

---

Please check Sections 3 and 6 of Chapter XIV in the following link that should lead you to NASDAQ's index options standards:

<http://nasdaq.cchwallstreet.com/NASDAQTools/PlatformViewer.asp?selectednode=chp%5F1%5F1%5F14&manual=%2Fnasdaq%2Fmain%2Fnasdaq%2Doptionsrules%2F>

I've cut and pasted these Sections below as well. You'll notice that the criteria may differ, depending on the specific underlying index (MSCI) named in the rule:

**Sec. 3 Designation of a Broad-Based Index**

(a) The component securities of an index underlying a broad-based index option contract need not meet the requirements of Section 3 of Chapter IV of these Rules (Criteria for Underlying Securities). Except as set forth in subparagraph (b) below, the listing of a class of index options on a broad-based index requires the filing of a proposed rule change to be approved by the SEC under Section 19(b) of the Exchange Act.

(b) NOM may trade options on a broad-based index pursuant to Rule 19b-4(e) of the Securities Exchange Act of 1934, if each of the following conditions is satisfied:

- (1) The index is broad-based, as defined in Section 2(j) of this Chapter;
- (2) Options on the index are designated as A.M.-settled;
- (3) The index is capitalization-weighted, modified capitalization weighted, price-weighted, or equal dollar-weighted;
- (4) The index consists of 50 or more component securities;
- (5) Component securities that account for at least ninety-five percent (95%) of the weight of the index have a market capitalization of at least \$75 million, except that component securities that account for at least sixty-five percent (65%) of the weight of the index have a market capitalization of at least \$100 million;
- (6) Component securities that account for at least eighty percent (80%) of the weight of the index satisfy the requirements of Section 3 of Chapter IV applicable to individual underlying securities;
- (7) Each component security that accounts for at least one percent (1%) of the weight of the index has an average daily trading volume of at least 90,000 shares during the last six month period;

- (8) No single component security accounts for more than ten percent (10%) of the weight of the index, and the five highest weighted component securities in the index do not, in the aggregate, account for more than thirty-three percent (33%) of the weight of the index;
  - (9) Each component security must be an "NMS stock" as defined in Rule 600 of Regulation NMS under the Exchange Act;
  - (10) Non-U.S. component securities (stocks or ADRs) that are not subject to comprehensive surveillance agreements do not, in the aggregate, represent more than twenty percent (20%) of the weight of the index;
  - (11) The current index value is widely disseminated at least once every fifteen (15) seconds by OPRA, CTA/CQ, NIDS or one or more major market data vendors during the time options on the index are traded on NOM;
  - (12) NOM reasonably believes it has adequate system capacity to support the trading of options on the index, based on a calculation of NOM's current Independent System Capacity Advisor allocation and the number of new messages per second expected to be generated by options on such index;
  - (13) An equal dollar-weighted index is rebalanced at least once every calendar quarter;
  - (14) If an index is maintained by a broker-dealer, the index is calculated by a third-party who is not a broker-dealer, and the broker-dealer has erected an informational barrier around its personnel who have access to information concerning changes in, and adjustments to, the index;
  - (15) NOM has written surveillance procedures in place with respect to surveillance of trading of options on the index.
- (c) The following maintenance listing standards shall apply to each class of index options originally listed pursuant to paragraph (b) above:
- (1) The requirements set forth in subparagraphs (b)(1) - (b)(3) and (b)(9) - (b)(15) must continue to be satisfied. The requirements set forth in subparagraphs (b)(5) - (b)(8) must be satisfied only as of the first day of January and July in each year;
  - (2) The total number of component securities in the index may not increase or decrease by more than ten percent (10%) from the number of component securities in the index at the time of its initial listing. In the event a class of index options listed on NOM fails to satisfy the maintenance listing standards set forth herein, NOM shall not open for trading any additional series of options of that class unless the continued listing of that class of index options has been approved by the SEC under Section 19(b) (2) of the Exchange Act.
- (d) MSCI EM Index
- (i) NOM may trade options on the MSCI EM Index if each of the following conditions is satisfied:
    - (1) The index is broad-based, as defined in Chapter XIV, Section 2(j);
    - (2) Options on the index are designated as P.M.-settled index options;
    - (3) The index is capitalization-weighted, price-weighted, modified capitalization-weighted or equal dollar-weighted;
    - (4) The index consists of 500 or more component securities;
    - (5) All of the component securities of the index will have a market capitalization of greater than \$100 million;
    - (6) No single component security accounts for more than fifteen percent (15%) of the weight of the index, and the five highest weighted component securities in the index do not, in the aggregate, account for more than fifty percent (50%) of the weight of the MSCI EM Index;
    - (7) Non-U.S. component securities (stocks or ADRs) that are not subject to comprehensive surveillance agreements do not, in the aggregate, represent more than twenty-two and a half percent (22.5%) of the weight of the index;
    - (8) The current index value is widely disseminated at least once every fifteen (15) seconds by one or more major market data vendors during the time options on the index are traded on NOM;
    - (9) NOM reasonably believes it has adequate system capacity to support the trading of options on the index, based on a calculation of NOM's current Independent System Capacity Advisor (ISCA) allocation and the number of new messages per second expected to be generated by options on such index; and
    - (10) NOM has written surveillance procedures in place with respect to surveillance of

trading of options on the index.

(ii) The following maintenance listing standards shall apply to each class of index options originally listed pursuant to paragraph (d).

- (1) The conditions set forth in subparagraphs (d)(i) (1), (2), (3), (4), (7) (8), (9) and (10) must continue to be satisfied. The conditions set forth in subparagraphs (d)(i) (5) and (6) must be satisfied only as of the first day of January and July in each year;
- (2) The total number of component securities in the index may not increase or decrease by more than thirty-five percent (35%) from the number of component securities in the index at the time of its initial listing.

In the event a class of index options listed on NOM fails to satisfy the maintenance listing standards set forth herein, NOM shall not open for trading any additional series of options of that class unless the continued listing of that class of index options has been approved by the Commission under Section 19(b)(2) of the Exchange Act.

(e) MSCI EAFE Index

(i) NOM may trade options on the MSCI EAFE Index if each of the following conditions is satisfied:

- (1) The index is broad-based, as defined in Chapter XIV, Section 2(j);
- (2) Options on the index are designated as P.M.-settled index options;
- (3) The index is capitalization-weighted, price-weighted, modified capitalization-weighted or equal dollar-weighted;
- (4) The index consists of 500 or more component securities;
- (5) All of the component securities of the index will have a market capitalization of greater than \$100 million;
- (6) No single component security accounts for more than fifteen percent (15%) of the weight of the index, and the five highest weighted component securities in the index do not, in the aggregate, account for more than fifty percent (50%) of the weight of the MSCI EAFE Index;
- (7) Non-U.S. component securities (stocks or ADRs) that are not subject to comprehensive surveillance agreements do not, in the aggregate, represent more than twenty percent (20%) of the weight of the index;
- (8) The current index value is widely disseminated at least once every fifteen (15) seconds by one or more major market data vendors during the time options on the index are traded on NOM;
- (9) NOM reasonably believes it has adequate system capacity to support the trading of options on the index, based on a calculation of the NOM's current Independent System Capacity Advisor (ISCA) allocation and the number of new messages per second expected to be generated by options on such index; and
- (10) NOM has written surveillance procedures in place with respect to surveillance of trading of options on the index.

(ii) The following maintenance listing standards shall apply to each class of index options originally listed pursuant to paragraph (e).

- (1) The conditions set forth in subparagraphs (e)(i) (1), (2), (3), (4), (7) (8), (9) and (10) must continue to be satisfied. The conditions set forth in subparagraphs (e)(i) (5) and (6) must be satisfied only as of the first day of January and July in each year;
- (2) The total number of component securities in the index may not increase or decrease by more than thirty-five percent (35%) from the number of component securities in the index at the time of its initial listing.

In the event a class of index options listed on NOM fails to satisfy the maintenance listing standards set forth herein, NOM shall not open for trading any additional series of options of that class unless the continued listing of that class of index options has been approved by the Commission under Section 19(b)(2) of the Exchange Act.

## **Sec. 6 Designation of Narrow-Base and Micro-Narrow-Based Index Options**

(a) The component securities of an index underlying a narrow-based index option contract need not meet the requirements of Section 3 of Chapter IV of these Rules (Criteria for Underlying Securities). Except as set forth in subparagraph (b) below, the listing of a class of index options on a narrow-based index requires the filing of a proposed rule change to be approved by the SEC under Section 19(b) of the Exchange Act.

(b) *Narrow-Based Index*. NOM may trade options on a narrow-based index pursuant to Rule 19b-4(e) of the 1934 Act, if each of the following conditions is satisfied:

- (1) The options are designated as A.M.-settled index options;
- (2) The index is capitalization-weighted, price-weighted, equal dollar-weighted, or modified capitalization-weighted, and consists of ten or more component securities;
- (3) Each component security has a market capitalization of at least \$75 million, except that for each of the lowest weighted component securities in the index that in the aggregate account for no more than 10% of the weight of the index, the market capitalization is at least \$50 million;
- (4) Trading volume of each component security has been at least one million shares for each of the last six months, except that for each of the lowest weighted component securities in the index that in the aggregate account for no more than 10% of the weight of the index, trading volume has been at least 500,000 shares for each of the last six months;
- (5) In a capitalization-weighted index or a modified capitalization-weighted index, the lesser of the five highest weighted component securities in the index or the highest weighted component securities in the index that in the aggregate represent at least 30% of the total number of component securities in the index each have had an average monthly trading volume of at least 2,000,000 shares over the past six months;
- (6) No single component security represents more than 30% of the weight of the index, and the five highest weighted component securities in the index do not in the aggregate account for more than 50% (65% for an index consisting of fewer than 25 component securities) of the weight of the index;
- (7) Component securities that account for at least 90% of the weight of the index and at least 80% of the total number of component securities in the index satisfy the requirements of Chapter IV, Section 3 applicable to individual underlying securities;
- (8) Each component security must be an "NMS stock" as defined in Rule 600 of Regulation NMS of the Securities Exchange Act of 1934.
- (9) Non-U.S. component securities (stocks or ADRs) that are not subject to comprehensive surveillance agreements do not in the aggregate represent more than 20% of the weight of the index;
- (10) The current underlying index value will be reported at least once every fifteen seconds during the time the index options are traded on the Exchange;
- (11) An equal dollar-weighted index will be rebalanced at least once every calendar quarter; and
- (12) If an underlying index is maintained by a broker-dealer, the index is calculated by a third party who is not a brokerdealer, and the broker-dealer has erected a "Chinese Wall" around its personnel who have access to information concerning changes in and adjustments to the index.

(c) *Maintenance Criteria*. The following maintenance listing standards shall apply to each class of index options originally listed pursuant to subsection (b) above:

- (1) The requirements stated in subsections (b)(1), (3), (6), (7), (8), (9), (10), (11) and (12) must continue to be satisfied, provided that the requirements stated in subparagraph (b)(6) must be satisfied only as of the first day of January and July in each year;
- (2) The total number of component securities in the index may not increase or decrease by more than 33 1/3% from the number of component securities in the index at the time of its initial listing, and in no event may be less than nine component securities;
- (3) Trading volume of each component security in the index must be at least 500,000 shares for each of the last six months, except that for each of the lowest weighted component securities in the index that in the aggregate account for no more than 10% of the weight of the index, trading volume must be at least 400,000 shares for each of the last six months;
- (4) In a capitalization-weighted index or a modified capitalization-weighted index, the lesser of the five highest weighted component securities in the index or the highest weighted component securities in the index that in the aggregate represent at least 30% of the total number of stocks in the index each have had an average monthly trading volume of at least 1,000,000 shares over the past six months.

In the event a class of index options listed on NOM fails to satisfy the maintenance listing standards set forth herein, NOM shall not open for trading any additional series of options of that class unless such failure is determined by NOM not to be significant and the Commission concurs in that determination, or unless the continued listing of that class of index options has been approved by the Commission under Section 19(b)(2) of the Exchange Act.

(d) Notwithstanding paragraph (a) above, NOM may trade options on a Micro Narrow-Based security index pursuant to Rule 19b-4(e) of the 1934 Act, if each of the following condition is satisfied:

(1) The Index is a security index:

(i) that has 9 or fewer component securities; or

(ii) in which a component security comprises more than 30 percent of the index's weighting; or

(iii) in which the 5 highest weighted component securities in the aggregate comprise more than 60 percent of the index's weighting; or

(iv) in which the lowest weighted component securities comprising, in the aggregate, 25 percent of the index's weighting have an aggregate dollar value of average daily trading volume of less than \$50,000,000 (or in the case of an index with 15 or more component securities, \$30,000,000) except that if there are two or more securities with equal weighting that could be included in the calculation of the lowest weighted component securities comprising, in the aggregate, 25 percent of the index's weighting, such securities shall be ranked from lowest to highest dollar value of average daily trading volume and shall be included in the calculation based on their ranking starting with the lowest ranked security;

(2) The index is capitalization-weighted, modified capitalization-weighted, price-weighted, share weighted, equal dollarweighted, approximate equal-dollar weighted, or modified equal-dollar weighted;

(i) For the purposes of this paragraph (d), an approximate equal-dollar weighted index is composed of one or more securities in which each component security will be weighted equally based on its market price on the index's selection date and the index must be reconstituted and rebalanced if the notional value of the largest component is at least twice the notional volume of the smallest component for fifty percent or more of the trading days in the three months prior to December 31 of each year. For purposes of this provision the "notional value" is the market price of the component times the number of shares of the underlying component in the index. Reconstitution and rebalancing are also mandatory if the number of

components in the index is greater than five at the time of rebalancing. NOM reserves the right to rebalance quarterly at its discretion.

(ii) For the purposes of this paragraph (d), a modified equal-dollar weighted index is an index in which each underlying component represents a pre-determined weighting percentage of the entire index. Each component is assigned a weight that takes into account the relative market capitalization of the securities comprising the index. A modified equal-dollar weighted index will be balanced quarterly.

(iii) For the purposes of this paragraph (d), a share-weighted index is calculated by multiplying the price of the component security by an adjustment factor. Adjustment factors are chosen to reflect the investment objective deemed appropriate by the designer of the index and will be published by the Exchange as part of the contract specifications. The value of the index is calculated by adding the weight of each component security and dividing the total by an index divisor, calculated to yield a benchmark index level as of a particular date. A share-weighted index is not adjusted to reflect changes in the number of outstanding shares of its components. A share-weighted Micro Narrow-Based index will not be rebalanced. If a share-weighted Micro Narrow-Based Index fails to meet the maintenance listing standards under Subsection (e) of this rule, NOM will restrict trading in existing option series to closing transactions and will not issue additional series for that index.

(iv) NOM may rebalance any Micro Narrow-Based index on an interim basis if warranted as a result of extraordinary changes in the relative values of the component securities. To the extent investors with open positions must rely upon the continuity of the options contract on the index, outstanding contracts are unaffected by rebalancings.

(3) Each component security in the index has a minimum market capitalization of at least \$75 million, except that each of the lowest weighted securities in the index that in the aggregate account for no more than 10% of the weight of the index may have a minimum market capitalization of only \$50 million;

(4) The average daily trading volume in each of the preceding six months for each component security in the index is at least 45,500 shares, except that each of the lowest weighted component securities in the index that in the aggregate account for no more than 10% of the weight of the index may have an average daily trading volume of only 22,750 shares for each of the last six months;

(5) In a capitalization-weighted index, the lesser of: (1) the five highest weighted component securities in the index each have had an average daily trading volume of at least 90,000 shares over the past six months; or (2) the highest weighted component securities in the index that in the aggregate represent at least 30% of the total number of component securities in the index each have had an average daily trading volume of at least 90,000 shares over the past six months;

(6) Subject to subparagraphs (4) and (5) above, the component securities that account for at least 90% of the total index weight and at least 80% of the total number of component securities in the index must meet the requirements applicable to individual underlying securities;

(7)

(i) Each component security in the index is a "reported security" as defined in Rule 600 of Regulation NMS under the Exchange Act; and

(ii) Foreign securities or ADRs that are not subject to comprehensive surveillance sharing agreements do not represent more than 20% of the weight of the index;

(8) The current underlying index value will be reported at least once every fifteen seconds during the time the index options are traded on NOM;

- (9) An equal dollar-weighted index will be rebalanced at least once every quarter;
- (10) If the underlying index is maintained by a broker-dealer, the index is calculated by a third party who is not a brokerdealer, and the broker-dealer has in place an information barrier around its personnel who have access to information concerning changes in and adjustments to the index;
- (11) Each component security in the index is registered pursuant to Section 12 of the Exchange Act; and
- (12) Cash settled index options are designated as A.M.-settled options.
- (e) The following maintenance listing standards shall apply to each class of index options originally listed pursuant to paragraph (d) above:
- (1) The index meets the criteria of paragraph (d)(1) of this Rule;
- (2) Subject to subparagraphs (9) and (10) below, the component securities that account for at least 90% of the total index weight and at least 80% of the total number of component securities in the index must meet the requirements of Section 3 of Chapter IV.
- (3) Each component security in the index has a market capitalization of at least \$75 million, except that each of the lowest weighted component securities that in the aggregate account for no more than 10% of the weight of the index may have a market capitalization of only \$50 million;
- (4) Each component security must be an "NMS stock" as defined in Rule 600 of Regulation NMS under the Exchange Act; and
- (5) Foreign securities or ADRs thereon that are not subject to comprehensive surveillance sharing agreements do not represent more than 20% of the weight of the index;
- (6) The current underlying index value will be reported at least once every fifteen seconds during the time the index options are traded on NOM;
- (7) If the underlying index is maintained by a broker-dealer, the index is calculated by a third party who is not a brokerdealer, and the broker-dealer has in place an information barrier around its personnel who have access to information concerning changes in and adjustments to the index;
- (8) The total number of component securities in the index may not increase or decrease by more than 33 1/3% from the number of component securities in the index at the time of its initial listing;
- (9) Trading volume of each component security in the index must be at least 500,000 shares for each of the last six months, except that for each of the lowest weighted component securities in the index that in the aggregate account for no more than 10% of the weight of the index, trading volume must be at least 400,000 shares for each of the last six months;
- (10) In a capitalization-weighted index and a modified capitalization-weighted index, the lesser of the five highest weighted component securities in the index or the highest weighted component securities in the index that in the aggregate represent at least 30% of the total number of stocks in the index each have had an average monthly trading volume of at least 1,000,000 shares over the past six months;
- (11) Each component security in the index is registered pursuant to Section 12 of the Exchange Act;
- (12) In an approximate equal-dollar weighted index, the index must be reconstituted and rebalanced if the notional value of the largest component is at least twice the notional volume

of the smallest component for fifty percent or more of the trading days in the three months prior to December 31 of each year. For purposes of this provision the "notional value" is the market price of the component times the number of shares of the underlying component in the index. Reconstitution and rebalancing are also mandatory if the number of components in the index is greater than five at the time of rebalancing. NOM reserves the right to rebalance quarterly at its discretion;

(13) In a modified equal-dollar weighted index NOM will rebalance the index quarterly;

(14) In a share-weighted index, if a share-weighted Micro Narrow-Based Index fails to meet the maintenance listing standards under paragraph (e) of this Section NOM will not rebalance the index, will restrict trading in existing option series to closing transactions, and will not issue additional series for that index; and

(15) In the event a class of index options listed on NOM fails to satisfy the maintenance listing standards set forth herein, NOM shall not open for trading any additional series of options of that class unless such failure is determined by NOM not to be significant and the Commission concurs in that determination, or unless the continued listing of that class of index options has been approved by the Commission under Section 19(b)(2) of the 1934 Act.

Dear Keith,

Please invite Lourdes, Suzanne McGovern, and myself. I am not sure whether we will have written comments by then.

**Subject:** RE: index information and future call

Hi Matt,

We are available for the Thursday time slot (June 20<sup>th</sup>, 9-10am). I'll send out an Outlook invite. Who else should be on it on your side?

On our last phone call, you had mentioned that you would compile some written comments based on your and Jennifer's reactions to our draft. Would you be able to send those before the phone call?

Please send our thanks to Lourdes for the examples of referring to indexes.

Thanks,  
Keith

**Subject:** FW: index information and future call

Dear DOL,

Are you available from 9 to 10 on either Wednesday or Thursday of next week for a phone call?

Thanks

Matthew

**Subject:** index information and future call

Dear DOL,

As a follow up to our call a few weeks ago, we have some references for you regarding specifying indices in rulemaking (all thanks should go to Lourdes). The references are below my email signature.

We also would like to set up a call with you regarding the records BDs maintain. Are there times next week or the week after that you are available?

Thanks

In the product definitions adopting release regarding swaps (see attached), the Commission discussed the nature of security indexes in general (see pp. 48285-6). However, we did not address whether specific indexes are broad or narrow-based, under the definitions of swap and security-based swap jointly adopted by the Commission and the CFTC.

---

Please check Sections 3 and 6 of Chapter XIV in the following link that should lead you to NASDAQ's index options standards:

<http://nasdaq.cchwallstreet.com/NASDAQTools/PlatformViewer.asp?selectednode=chp%5F1%5F1%5F14&manual=%2Fnasdaq%2Fmain%2Fnasdaq%2Doptionsrules%2F>

I've cut and pasted these Sections below as well. You'll notice that the criteria may differ, depending on the specific underlying index (MSCI) named in the rule:

### Sec. 3 Designation of a Broad-Based Index

(a) The component securities of an index underlying a broad-based index option contract need not meet the requirements of Section 3 of Chapter IV of these Rules (Criteria for Underlying Securities). Except as set forth in subparagraph (b) below, the listing of a class of index options on a broad-based index requires the filing of a proposed rule change to be approved by the SEC under Section 19(b) of the Exchange Act.

(b) NOM may trade options on a broad-based index pursuant to Rule 19b-4(e) of the Securities Exchange Act of 1934, if each of the following conditions is satisfied:

- (1) The index is broad-based, as defined in Section 2(j) of this Chapter;
- (2) Options on the index are designated as A.M.-settled;
- (3) The index is capitalization-weighted, modified capitalization weighted, price-weighted, or equal dollar-weighted;
- (4) The index consists of 50 or more component securities;
- (5) Component securities that account for at least ninety-five percent (95%) of the weight of the index have a market capitalization of at least \$75 million, except that component securities that account for at least sixty-five percent (65%) of the weight of the index have a market capitalization of at least \$100 million;
- (6) Component securities that account for at least eighty percent (80%) of the weight of the index satisfy the requirements of Section 3 of Chapter IV applicable to individual underlying securities;
- (7) Each component security that accounts for at least one percent (1%) of the weight of the index has an average daily trading volume of at least 90,000 shares during the last six month period;
- (8) No single component security accounts for more than ten percent (10%) of the weight of the index, and the five highest weighted component securities in the index do not, in the aggregate, account for more than thirty-three percent (33%) of the weight of the index;
- (9) Each component security must be an "NMS stock" as defined in Rule 600 of Regulation NMS under the Exchange Act;
- (10) Non-U.S. component securities (stocks or ADRs) that are not subject to comprehensive surveillance agreements do not, in the aggregate, represent more than twenty percent (20%) of the weight of the index;
- (11) The current index value is widely disseminated at least once every fifteen (15) seconds by OPRA, CTA/CQ, NIDS or one or more major market data vendors during the time options on the index are traded on NOM;
- (12) NOM reasonably believes it has adequate system capacity to support the trading of options on the index, based on a calculation of NOM's current Independent System Capacity Advisor allocation and the number of new messages per second expected to be generated by options on such index;
- (13) An equal dollar-weighted index is rebalanced at least once every calendar quarter;
- (14) If an index is maintained by a broker-dealer, the index is calculated by a third-party who is not a broker-dealer, and the broker-dealer has erected an informational barrier around its personnel who have access to information concerning changes in, and adjustments to, the index;
- (15) NOM has written surveillance procedures in place with respect to surveillance of trading of options on the index.

(c) The following maintenance listing standards shall apply to each class of index options originally listed pursuant to paragraph (b) above:

- (1) The requirements set forth in subparagraphs (b)(1) - (b)(3) and (b)(9) - (b)(15) must continue to be satisfied. The requirements set forth in subparagraphs (b)(5) - (b)(8) must be satisfied only as of the first day of January and July in each year;
- (2) The total number of component securities in the index may not increase or decrease by more than ten percent (10%) from the number of component securities in the index at the time of its initial listing. In the event a class of index options listed on NOM fails to satisfy the maintenance listing standards set forth herein, NOM shall not open for trading any additional series of options of that class unless the continued listing of that class of index options has been approved by the SEC under Section 19(b) (2) of the Exchange Act.

(d) MSCI EM Index

- (i) NOM may trade options on the MSCI EM Index if each of the following conditions is

satisfied:

- (1) The index is broad-based, as defined in Chapter XIV, Section 2(j);
  - (2) Options on the index are designated as P.M.-settled index options;
  - (3) The index is capitalization-weighted, price-weighted, modified capitalization-weighted or equal dollar-weighted;
  - (4) The index consists of 500 or more component securities;
  - (5) All of the component securities of the index will have a market capitalization of greater than \$100 million;
  - (6) No single component security accounts for more than fifteen percent (15%) of the weight of the index, and the five highest weighted component securities in the index do not, in the aggregate, account for more than fifty percent (50%) of the weight of the MSCI EM Index;
  - (7) Non-U.S. component securities (stocks or ADRs) that are not subject to comprehensive surveillance agreements do not, in the aggregate, represent more than twenty-two and a half percent (22.5%) of the weight of the index;
  - (8) The current index value is widely disseminated at least once every fifteen (15) seconds by one or more major market data vendors during the time options on the index are traded on NOM;
  - (9) NOM reasonably believes it has adequate system capacity to support the trading of options on the index, based on a calculation of NOM's current Independent System Capacity Advisor (ISCA) allocation and the number of new messages per second expected to be generated by options on such index; and
  - (10) NOM has written surveillance procedures in place with respect to surveillance of trading of options on the index.
- (ii) The following maintenance listing standards shall apply to each class of index options originally listed pursuant to paragraph (d).
- (1) The conditions set forth in subparagraphs (d)(i) (1), (2), (3), (4), (7) (8), (9) and (10) must continue to be satisfied. The conditions set forth in subparagraphs (d)(i) (5) and (6) must be satisfied only as of the first day of January and July in each year;
  - (2) The total number of component securities in the index may not increase or decrease by more than thirty-five percent (35%) from the number of component securities in the index at the time of its initial listing.

In the event a class of index options listed on NOM fails to satisfy the maintenance listing standards set forth herein, NOM shall not open for trading any additional series of options of that class unless the continued listing of that class of index options has been approved by the Commission under Section 19(b)(2) of the Exchange Act.

(e) MSCI EAFE Index

- (i) NOM may trade options on the MSCI EAFE Index if each of the following conditions is satisfied:
- (1) The index is broad-based, as defined in Chapter XIV, Section 2(j);
  - (2) Options on the index are designated as P.M.-settled index options;
  - (3) The index is capitalization-weighted, price-weighted, modified capitalization-weighted or equal dollar-weighted;
  - (4) The index consists of 500 or more component securities;
  - (5) All of the component securities of the index will have a market capitalization of greater than \$100 million;
  - (6) No single component security accounts for more than fifteen percent (15%) of the weight of the index, and the five highest weighted component securities in the index do not, in the aggregate, account for more than fifty percent (50%) of the weight of the MSCI EAFE Index;
  - (7) Non-U.S. component securities (stocks or ADRs) that are not subject to comprehensive surveillance agreements do not, in the aggregate, represent more than twenty percent (20%) of the weight of the index;
  - (8) The current index value is widely disseminated at least once every fifteen (15) seconds by one or more major market data vendors during the time options on the index are traded on NOM;
  - (9) NOM reasonably believes it has adequate system capacity to support the trading of

- options on the index, based on a calculation of the NOM's current Independent System Capacity Advisor (ISCA) allocation and the number of new messages per second expected to be generated by options on such index; and
- (10) NOM has written surveillance procedures in place with respect to surveillance of trading of options on the index.
- (ii) The following maintenance listing standards shall apply to each class of index options originally listed pursuant to paragraph (e).
- (1) The conditions set forth in subparagraphs (e)(i) (1), (2), (3), (4), (7) (8), (9) and (10) must continue to be satisfied. The conditions set forth in subparagraphs (e)(i) (5) and (6) must be satisfied only as of the first day of January and July in each year;
- (2) The total number of component securities in the index may not increase or decrease by more than thirty-five percent (35%) from the number of component securities in the index at the time of its initial listing.
- In the event a class of index options listed on NOM fails to satisfy the maintenance listing standards set forth herein, NOM shall not open for trading any additional series of options of that class unless the continued listing of that class of index options has been approved by the Commission under Section 19(b)(2) of the Exchange Act.

\* \* \* \* \*

## **Sec. 6 Designation of Narrow-Base and Micro-Narrow-Based Index Options**

- (a) The component securities of an index underlying a narrow-based index option contract need not meet the requirements of Section 3 of Chapter IV of these Rules (Criteria for Underlying Securities). Except as set forth in subparagraph (b) below, the listing of a class of index options on a narrow-based index requires the filing of a proposed rule change to be approved by the SEC under Section 19(b) of the Exchange Act.
- (b) *Narrow-Based Index.* NOM may trade options on a narrow-based index pursuant to Rule 19b-4(e) of the 1934 Act, if each of the following conditions is satisfied:
- (1) The options are designated as A.M.-settled index options;
- (2) The index is capitalization-weighted, price-weighted, equal dollar-weighted, or modified capitalization-weighted, and consists of ten or more component securities;
- (3) Each component security has a market capitalization of at least \$75 million, except that for each of the lowest weighted component securities in the index that in the aggregate account for no more than 10% of the weight of the index, the market capitalization is at least \$50 million;
- (4) Trading volume of each component security has been at least one million shares for each of the last six months, except that for each of the lowest weighted component securities in the index that in the aggregate account for no more than 10% of the weight of the index, trading volume has been at least 500,000 shares for each of the last six months;
- (5) In a capitalization-weighted index or a modified capitalization-weighted index, the lesser of the five highest weighted component securities in the index or the highest weighted component securities in the index that in the aggregate represent at least 30% of the total number of component securities in the index each have had an average monthly trading volume of at least 2,000,000 shares over the past six months;
- (6) No single component security represents more than 30% of the weight of the index, and the five highest weighted component securities in the index do not in the aggregate account for more than 50% (65% for an index consisting of fewer than 25 component securities) of the weight of the index;
- (7) Component securities that account for at least 90% of the weight of the index and at least

80% of the total number of component securities in the index satisfy the requirements of Chapter IV, Section 3 applicable to individual underlying securities;

(8) Each component security must be an "NMS stock" as defined in Rule 600 of Regulation NMS of the Securities Exchange Act of 1934.

(9) Non-U.S. component securities (stocks or ADRs) that are not subject to comprehensive surveillance agreements do not in the aggregate represent more than 20% of the weight of the index;

(10) The current underlying index value will be reported at least once every fifteen seconds during the time the index options are traded on the Exchange;

(11) An equal dollar-weighted index will be rebalanced at least once every calendar quarter; and

(12) If an underlying index is maintained by a broker-dealer, the index is calculated by a third party who is not a brokerdealer, and the broker-dealer has erected a "Chinese Wall" around its personnel who have access to information concerning changes in and adjustments to the index.

(c) *Maintenance Criteria.* The following maintenance listing standards shall apply to each class of index options originally listed pursuant to subsection (b) above:

(1) The requirements stated in subsections (b)(1), (3), (6), (7), (8), (9), (10), (11) and (12) must continue to be satisfied, provided that the requirements stated in subparagraph (b)(6) must be satisfied only as of the first day of January and July in each year;

(2) The total number of component securities in the index may not increase or decrease by more than 33 1/3% from the number of component securities in the index at the time of its initial listing, and in no event may be less than nine component securities;

(3) Trading volume of each component security in the index must be at least 500,000 shares for each of the last six months, except that for each of the lowest weighted component securities in the index that in the aggregate account for no more than 10% of the weight of the index, trading volume must be at least 400,000 shares for each of the last six months;

(4) In a capitalization-weighted index or a modified capitalization-weighted index, the lesser of the five highest weighted component securities in the index or the highest weighted component securities in the index that in the aggregate represent at least 30% of the total number of stocks in the index each have had an average monthly trading volume of at least 1,000,000 shares over the past six months.

In the event a class of index options listed on NOM fails to satisfy the maintenance listing standards set forth herein, NOM shall not open for trading any additional series of options of that class unless such failure is determined by NOM not to be significant and the Commission concurs in that determination, or unless the continued listing of that class of index options has been approved by the Commission under Section 19(b)(2) of the Exchange Act.

(d) Notwithstanding paragraph (a) above, NOM may trade options on a Micro Narrow-Based security index pursuant to Rule 19b-4(e) of the 1934 Act, if each of the following condition is satisfied:

(1) The Index is a security index:

(i) that has 9 or fewer component securities; or

(ii) in which a component security comprises more than 30 percent of the index's weighting; or

(iii) in which the 5 highest weighted component securities in the aggregate comprise more

than 60 percent of the index's weighting; or

(iv) in which the lowest weighted component securities comprising, in the aggregate, 25 percent of the index's weighting have an aggregate dollar value of average daily trading volume of less than \$50,000,000 (or in the case of an index with 15 or more component securities, \$30,000,000) except that if there are two or more securities with equal weighting that could be included in the calculation of the lowest weighted component securities comprising, in the aggregate, 25 percent of the index's weighting, such securities shall be ranked from lowest to highest dollar value of average daily trading volume and shall be included in the calculation based on their ranking starting with the lowest ranked security;

(2) The index is capitalization-weighted, modified capitalization-weighted, price-weighted, share weighted, equal dollarweighted, approximate equal-dollar weighted, or modified equal-dollar weighted;

(i) For the purposes of this paragraph (d), an approximate equal-dollar weighted index is composed of one or more securities in which each component security will be weighted equally based on its market price on the index's selection date and the index must be reconstituted and rebalanced if the notional value of the largest component is at least twice the notional value of the smallest component for fifty percent or more of the trading days in the three months prior to December 31 of each year. For purposes of this provision the "notional value" is the market price of the component times the number of shares of the underlying component in the index. Reconstitution and rebalancing are also mandatory if the number of components in the index is greater than five at the time of rebalancing. NOM reserves the right to rebalance quarterly at its discretion.

(ii) For the purposes of this paragraph (d), a modified equal-dollar weighted index is an index in which each underlying component represents a pre-determined weighting percentage of the entire index. Each component is assigned a weight that takes into account the relative market capitalization of the securities comprising the index. A modified equal-dollar weighted index will be balanced quarterly.

(iii) For the purposes of this paragraph (d), a share-weighted index is calculated by multiplying the price of the component security by an adjustment factor. Adjustment factors are chosen to reflect the investment objective deemed appropriate by the designer of the index and will be published by the Exchange as part of the contract specifications. The value of the index is calculated by adding the weight of each component security and dividing the total by an index divisor, calculated to yield a benchmark index level as of a particular date. A share-weighted index is not adjusted to reflect changes in the number of outstanding shares of its components. A share-weighted Micro Narrow-Based index will not be rebalanced. If a share-weighted Micro Narrow-Based Index fails to meet the maintenance listing standards under Subsection (e) of this rule, NOM will restrict trading in existing option series to closing transactions and will not issue additional series for that index.

(iv) NOM may rebalance any Micro Narrow-Based index on an interim basis if warranted as a result of extraordinary changes in the relative values of the component securities. To the extent investors with open positions must rely upon the continuity of the options contract on the index, outstanding contracts are unaffected by rebalancings.

(3) Each component security in the index has a minimum market capitalization of at least \$75 million, except that each of the lowest weighted securities in the index that in the aggregate account for no more than 10% of the weight of the index may have a minimum market capitalization of only \$50 million;

(4) The average daily trading volume in each of the preceding six months for each component security in the index is at least 45,500 shares, except that each of the lowest weighted component securities in the index that in the aggregate account for no more than 10% of the weight of the index may have an average daily trading volume of only 22,750 shares for each

of the last six months;

(5) In a capitalization-weighted index, the lesser of: (1) the five highest weighted component securities in the index each have had an average daily trading volume of at least 90,000 shares over the past six months; or (2) the highest weighted component securities in the index that in the aggregate represent at least 30% of the total number of component securities in the index each have had an average daily trading volume of at least 90,000 shares over the past six months;

(6) Subject to subparagraphs (4) and (5) above, the component securities that account for at least 90% of the total index weight and at least 80% of the total number of component securities in the index must meet the requirements applicable to individual underlying securities;

(7)

(i) Each component security in the index is a "reported security" as defined in Rule 600 of Regulation NMS under the Exchange Act; and

(ii) Foreign securities or ADRs that are not subject to comprehensive surveillance sharing agreements do not represent more than 20% of the weight of the index;

(8) The current underlying index value will be reported at least once every fifteen seconds during the time the index options are traded on NOM;

(9) An equal dollar-weighted index will be rebalanced at least once every quarter;

(10) If the underlying index is maintained by a broker-dealer, the index is calculated by a third party who is not a broker-dealer, and the broker-dealer has in place an information barrier around its personnel who have access to information concerning changes in and adjustments to the index;

(11) Each component security in the index is registered pursuant to Section 12 of the Exchange Act; and

(12) Cash settled index options are designated as A.M.-settled options.

(e) The following maintenance listing standards shall apply to each class of index options originally listed pursuant to paragraph (d) above:

(1) The index meets the criteria of paragraph (d)(1) of this Rule;

(2) Subject to subparagraphs (9) and (10) below, the component securities that account for at least 90% of the total index weight and at least 80% of the total number of component securities in the index must meet the requirements of Section 3 of Chapter IV.

(3) Each component security in the index has a market capitalization of at least \$75 million, except that each of the lowest weighted component securities that in the aggregate account for no more than 10% of the weight of the index may have a market capitalization of only \$50 million;

(4) Each component security must be an "NMS stock" as defined in Rule 600 of Regulation NMS under the Exchange Act; and

(5) Foreign securities or ADRs thereon that are not subject to comprehensive surveillance sharing agreements do not represent more than 20% of the weight of the index;

(6) The current underlying index value will be reported at least once every fifteen seconds during the time the index options are traded on NOM;

(7) If the underlying index is maintained by a broker-dealer, the index is calculated by a third

party who is not a brokerdealer, and the broker-dealer has in place an information barrier around its personnel who have access to information concerning changes in and adjustments to the index;

- (8) The total number of component securities in the index may not increase or decrease by more than 33 1/3% from the number of component securities in the index at the time of its initial listing;
- (9) Trading volume of each component security in the index must be at least 500,000 shares for each of the last six months, except that for each of the lowest weighted component securities in the index that in the aggregate account for no more than 10% of the weight of the index, trading volume must be at least 400,000 shares for each of the last six months;
- (10) In a capitalization-weighted index and a modified capitalization-weighted index, the lesser of the five highest weighted component securities in the index or the highest weighted component securities in the index that in the aggregate represent at least 30% of the total number of stocks in the index each have had an average monthly trading volume of at least 1,000,000 shares over the past six months;
- (11) Each component security in the index is registered pursuant to Section 12 of the Exchange Act;
- (12) In an approximate equal-dollar weighted index, the index must be reconstituted and rebalanced if the notional value of the largest component is at least twice the notional volume of the smallest component for fifty percent or more of the trading days in the three months prior to December 31 of each year. For purposes of this provision the "notional value" is the market price of the component times the number of shares of the underlying component in the index. Reconstitution and rebalancing are also mandatory if the number of components in the index is greater than five at the time of rebalancing. NOM reserves the right to rebalance quarterly at its discretion;
- (13) In a modified equal-dollar weighted index NOM will rebalance the index quarterly;
- (14) In a share-weighted index, if a share-weighted Micro Narrow-Based Index fails to meet the maintenance listing standards under paragraph (e) of this Section NOM will not rebalance the index, will restrict trading in existing option series to closing transactions, and will not issue additional series for that index; and
- (15) In the event a class of index options listed on NOM fails to satisfy the maintenance listing standards set forth herein, NOM shall not open for trading any additional series of options of that class unless such failure is determined by NOM not to be significant and the Commission concurs in that determination, or unless the continued listing of that class of index options has been approved by the Commission under Section 19(b)(2) of the 1934 Act.

Hi Jennifer:

Thanks for your message and invitation. We would like to meet with the group on November 8 (preferably) or 15. We look forward to meeting with the group.

Best,

Chris

Hi, everyone. I would like to coordinate a meeting for you to meet with our fiduciary working group here at the SEC. Together we can discuss some of the industry comments you've received about potential changes to a BD business model. We have a normal working group meeting at 10:00 on Tuesdays. If this time and day works for you, could you suggest two future dates that would accommodate your schedules? I will then check schedules here and confirm with you.

Thanks,

Jennifer

**Jennifer Marietta-Westberg, PhD**

Hi Matt:

We were hoping to discuss the comments you and Jennifer made at February 28 meeting in more detail with a smaller group and to hear any additional comments you may have.

The attendees from EBSA will be:

Joe Piacentini  
Keith Bergstresser  
James Butikofer  
Allan Beckmann  
Chris Cosby

Please let me know who will be attending from SEC.

Thanks!

Chris

**Subject:** FW: SEC Contact

Hi Jennifer:

Please see the message below from our former colleague, Jerry Lindrew, who is now at Pew Charitable Trusts. Jerry did great work at over DOL for over 30 years (he retired in January 2013), and was Joe's Deputy Director. Is it okay for me to forward Jerry directly to you or are there other contacts at SEC that I could forward him to?

Thanks,

Chris

**Subject:** SEC Contact

Hi Chris:

Could you tell me what the SEC contact for policy/research related issues. There is an emerging issues group that has asked me to find out so they can talk with them.

Thanks,  
Jerry

**Sent:** Monday, August 13, 2012 05:56 PM  
**To:** Cosby, Chris - EBSA  
**Subject:** Use of Credit Ratings

Chris,

I attended Arthur Laby's presentation recently at your offices and I work in the SEC's Division of Investment Management. I am working on a project involving the use of credit ratings and I know that certain prohibited transaction exemptions include credit ratings as a condition. I understand that the PTEs are not considered federal regulations for purposes of the Dodd-Frank Act's requirement to remove credit ratings, but I believe DOL has been looking at the use of credit ratings in PTEs. Do you know of someone at DOL that I could talk to about this issue?

Thanks,

Sarah Buescher

Hi Jim,

Sorry for the delay in responding, we had some folks who were out sick. Is Monday, January 12 still a possibility?

We can schedule a conference room in the main Dept. of Labor building (Frances Perkins) for the times you are available.

I thought I would also mention the group of persons at the DOL interested in your work with the Form ADV has expanded to include financial and data analysts, and IT.

Thanks again,  
Magali

Hi Jim,

I will be out of the office for the remainder of the year, but please feel free to contact Don Criswell to schedule a follow up meeting.

If scheduling a follow up meeting at some point in the week of January 5 isn't possible, please let us know if another date would be better.

Thanks,  
Magali

Hi Holly,

I anticipate attendance at the Monday meeting by the following persons with Joe Piacentini and Lyssa Hall primarily handling the discussion:

Joe Piacentini, Director, Office of Policy and Research and Chief Economist, EBSA, assisted by other economists on his staff, particularly Keith Bergstresser, and lawyers, particularly Chris Cosby, Regulatory Policy and Analysis.

Lyssa Hall, Acting Director, Office of Exemption Determinations, EBSA, assisted by other lawyers on her staff, particularly Karen Lloyd, Class Exemptions.

Joe Canary, Director, Office of Regulations and Interpretations, EBSA, assisted, Jeffrey Turner, Deputy Director, and other lawyers on his staff, including Lou Campagna and myself, Fiduciary Interpretations.

William Taylor, Plan Benefits Security Division, Solicitor of Labor.

Thanks,  
Susan

Good morning Katy,

Thanks for getting back to me so quickly with dates. I will check calendars here against June 4/5 and be back to you as soon as I can. I think an hour should be enough for your colleagues to be briefed on the conditions in the proposed exemption and to provide preliminary feedback on whether they see advertising and/or other issues that need to be explored. As we discussed, a representative from EBSA's Office of Exemption Determinations, Office of Policy and Research, Office of Regulations and Interpretations and the Solicitor's Office will be attending. I suggest that at this point we keep the meeting smaller and on a more staff level technical basis.

Susan

Hello Susan,

I'm working on gathering the list of attendees. It looks like Monday June 4 from 1-3 is free for everyone so far. Also Tuesday, June 5 from 10 to 11am. If that works please let me know as I hope to block that time for everyone so they keep it open. Would you anticipate the meeting to run for an hour, should we plan for more?

There are several 12pms and 4-5pms available for everyone as well. Do you have alternative dates/times that I could send around?

Thanks,

Katy

Susan,

Below is a list of the attendees:

**Chairman's Office:**

Jennifer McHugh, Senior Advisor

**Division of Trading and Markets:**

David Blass, Chief Counsel

Lourdes Gonzalez, Assistant Chief Counsel

**Division of Investment Management:**

Doug Scheidt, Chief Counsel

Sarah Buescher, Branch Chief

**Division of Risk, Strategy and Innovation**

Jennifer Marietta-Westberg, Assistant Director

I'm copying Holly Hunter-Ceci on these e-mails. Holly is a colleague in IM-OCC who may need to sub for me if the meeting is not able to occur the first week in June. I'll be on vacation after June 8, so I want to make sure Holly is in the loop.

**Subject:** RE: SEC meeting

Susan,

Below is a list of the attendees:

**Chairman's Office:**

Jennifer McHugh, Senior Advisor

**Division of Trading and Markets:**

David Blass, Chief Counsel

Lourdes Gonzalez, Assistant Chief Counsel

**Division of Investment Management:**

Doug Scheidt, Chief Counsel

Sarah Buescher, Branch Chief

**Division of Risk, Strategy and Innovation**

Jennifer Marietta-Westberg, Assistant Director

I'm copying Holly Hunter-Ceci on these e-mails. Holly is a colleague in IM-OCC who may need to sub for me if the meeting is not able to occur the first week in June. I'll be on vacation after June 8, so I want to make sure Holly is in the loop.

Good morning Katy,  
Thanks for getting back to me so quickly with dates. I will check calendars here against June 4/5 and be back to you as soon as I can. I think an hour should be enough for your colleagues to be briefed on the conditions in the proposed exemption and to provide preliminary feedback on whether they see advertising and/or other issues that need to be explored. As we discussed, a representative

from EBSA's Office of Exemption Determinations, Office of Policy and Research, Office of Regulations and Interpretations and the Solicitor's Office will be attending. I suggest that at this point we keep the meeting smaller and on a more staff level technical basis.

Susan

Hello Susan,

I'm working on gathering the list of attendees. It looks like Monday June 4 from 1-3 is free for everyone so far. Also Tuesday, June 5 from 10 to 11am. If that works please let me know as I hope to block that time for everyone so they keep it open. Would you anticipate the meeting to run for an hour, should we plan for more?

There are several 12pms and 4-5pms available for everyone as well. Do you have alternative dates/times that I could send around?

Thanks,

Katy

Susan,

Below is a list of the attendees:

**Chairman's Office:**

Jennifer McHugh, Senior Advisor

**Division of Trading and Markets:**

David Blass, Chief Counsel

Lourdes Gonzalez, Assistant Chief Counsel

**Division of Investment Management:**

Doug Scheidt, Chief Counsel

Sarah Buescher, Branch Chief

**Division of Risk, Strategy and Innovation**

Jennifer Marietta-Westberg, Assistant Director

I'm copying Holly Hunter-Ceci on these e-mails. Holly is a colleague in IM-OCC who may need to sub for me if the meeting is not able to occur the first week in June. I'll be on vacation after June 8, so I want to make sure Holly is in the loop.

Good morning Katy,

Thanks for getting back to me so quickly with dates. I will check calendars here against June 4/5 and be back to you as soon as I can. I think an hour should be enough for your colleagues to be briefed on the conditions in the proposed exemption and to provide preliminary feedback on whether they see advertising and/or other issues that need to be explored. As we discussed, a representative from EBSA's Office of Exemption Determinations, Office of Policy and Research, Office of Regulations and Interpretations and the Solicitor's Office will be attending. I suggest that at this point we keep the meeting smaller and on a more staff level technical basis.

Susan

Hello Susan,

I'm working on gathering the list of attendees. It looks like Monday June 4 from 1-3 is free for everyone so far. Also Tuesday, June 5 from 10 to 11am. If that works please let me know as I hope to block that time for everyone so they keep it open. Would you anticipate the meeting to run for an hour, should we plan for more?

There are several 12pms and 4-5pms available for everyone as well. Do you have alternative dates/times that I could send around?

Thanks,

Katy

Tim,

Below is a list of provisions and rules under the federal securities laws that we discussed on our call on Tuesday. Please note that this list reflects those rules that the staff believes to be most relevant, based on the staff's understanding of DOL staff's current approach with respect to the General Exemption, including the types of assets that would be covered. Additional provisions or rules may be relevant, should the DOL staff change its approach.

## **Generally**

See the SEC Staff Section 913 Study ("Study") for an overview of disclosure, supervision and other broker-dealer and investment adviser obligations, available at: <http://www.sec.gov/news/studies/2011/913studyfinal.pdf>. Note that some of the FINRA/NASD rules cited in the study have been amended or replaced with FINRA rules since publication, including the rules relating to supervision/audit. Where relevant, the new rules are cited below. The FINRA/NASD rules cited in the Study, and links to new rules, are available through FINRA's manual at: <http://finra.complinet.com>.

## **Disclosure and Data Retention Provisions and Rules**

Form ADV, part 2A (particularly items 4-6, 8, 10-12, 14, 16, 17), available at: <http://www.sec.gov/about/forms/formadv-part2.pdf>

Form N-1A (registration form used by registered open-end investment companies, including mutual funds), available at: <http://www.sec.gov/about/forms/formn-1a.pdf>

Advisers Act Rule 204-2 (books and records rule)

Securities Act Rule 421 (regarding the use of plain English)

Exchange Act Rule 10b-5

Exchange Act Rule 10b-10

Exchange Act Rule 10b-16

Exchange Act Rules 15c1-5 and 15c1-6

Exchange Act Rules 15g-1 through 15g-6, 15g-9

Exchange Act Rule 17a-3(a)(1)-(3), (5)

Exchange Act Rule 17a-4

FINRA Rule 2124

FINRA Rule 2232

FINRA Rule 2262

FINRA Rule 2269

**From:** [Porter, Jennifer R.](#)  
**To:** [Hauser, Timothy - EBSA](#)  
**Subject:** Follow-up from 9/26 call with SEC/DOL/Treasury  
**Date:** Tuesday, September 30, 2014 10:55:38 AM

---

Tim,

On the call with DOL and Treasury staff on Friday, we said that we would send links to information about investor testing and to examples of broker-dealer's firm brochures. That information is below. Please let me know if it would help for me to send this to all of the individuals included on the meeting invitation on Friday, or if I should send it to a smaller subset of individuals.

**Investor Testing links:**

Staff pulled selected documents relating to the point of sale rulemaking and Section 917 Study that we think would be most useful based on our conversations (but this should not be viewed as the entire universe of materials).

Study Regarding Financial Literacy Among Investors As Required by Section 917 of the Dodd-Frank Wall Street Reform and Consumer Protection Act

<http://www.sec.gov/news/studies/2012/917-financial-literacy-study-part1.pdf>

Results of Investor Interviews to Test Oral Point of Sale Disclosure; Supplemental Report to the Securities and Exchange Commission (June 1, 2005)

<http://www.sec.gov/rules/proposed/s70604/supprpt060105.pdf>

Results of Investor Interviews to Test and Refine Point of Sale Disclosure Forms Report to the Securities and Exchange Commission May 31, 2005

<http://www.sec.gov/rules/proposed/s70604/siegel053105.pdf>

Results of In-Depth Investor Interviews Regarding Proposed Mutual Fund Sales Fee and Conflict of Interest Disclosure Forms

(Note: This report serves as a supplement to the existing Results of In- Depth Investor Interviews Regarding Proposed Mutual Fund Sales Fee and Conflict of Interest Disclosure Forms, dated November 4, 2004.

Supplemental Report to the Securities and Exchange Commission November 29, 2004)

<http://www.sec.gov/rules/proposed/s70604/sup-rep010705.pdf>

Results of In-Depth Investor Interviews Regarding Proposed Mutual Fund Sales Fee and Conflict of Interest Disclosure Forms Report to the Securities and Exchange Commission November 4, 2004

<http://www.sec.gov/rules/proposed/s70604/rep110404.pdf>

-  
**Links to certain firms' compensation-related disclosures and, for some firms, their separate revenue sharing disclosures:**

Staff pulled a random sampling of brochures that we thought may be of interest based on Friday's conversation. That being said, firms generally have a variety of brochures addressing a number of different areas on their websites (with more or less detail). If you are interested in something different than is captured below, we would suggest referring to each firm's website to see if there is something more on point.

Morgan Stanley

### **TD Ameritrade**

3a. “Self-Directed Account. I understand that Accounts opened with you are self-directed. I am responsible for all purchase and sell orders, decisions to continue with an investment strategy or to hold an investment, and instructions placed in my Account. Unless you provide advice to me that is clearly identified by you as an individualized recommendation for me, any investment decision that I make or investment strategy that I utilize, including the decision to hold any and all of the securities or derivatives in the Account, is based on my own investment decisions or those of my agent and is at my own risk. All investments involve risk, and unless you provide individualized recommendations to me, I or my agent are responsible for determining the suitability of any trade, investment, investment strategy, and risk associated with my investments. TD Ameritrade Content or Third-Party Content I access through you does not constitute a recommendation to invest in any security or derivative, or to utilize any investment strategy.”

13. “Advice

- a. Unless otherwise noted by you in writing, you will act only as broker/dealer and not as an investment advisor governed by the Investment Advisers Act of 1940.
- b. When I act as a self-directed investor, I am responsible for determining the suitability of any particular investment strategy, transaction, or security. You have no responsibility for any such determination unless you otherwise agree in writing, or you or your representative gives advice directly to me that is identified clearly as recommendation by you to enter into a particular transaction or to buy or sell a particular security or securities.
- c. From time to time, in connection with my Account, you may provide investment-related guidance and recommendations to me. I agree that when you make a recommendation to me, you determine its suitability for me at the time of the recommendation. If the recommendation transaction is not effected contemporaneously with your recommendation, I agree you will have no liability if I choose to effect such transaction in the future. Furthermore, when you are acting as broker/dealer for my Account, I agree that you have no ongoing duty to ensure a recommendation continues to be suitable for me. Rather, I have an affirmative duty to monitor profits and losses in my Account, along with my investment goals and risk tolerance and to modify my trading decisions accordingly.
- d. Unless otherwise agreed to in writing, you do not have discretionary authority over my Account or an obligation to review or to make recommendations for the investment of securities or cash in my Account.
- e. Any research, analysis, news, or other information made available by you does not constitute an individualized recommendation by you to buy or sell a particular security.
- f. You do not provide legal, tax, or estate planning advice.”

“Additional Services. Edward Jones may provide me with information about financial products as well as investment research, investment recommendations, financial assessment tools, investor education and other services to enable

me to determine my investment objective and make my investment decisions. Edward Jones will not charge a separate fee for these services as they are incidental to its brokerage services. Unless otherwise stated in a written agreement between me and Edward Jones, I agree these services do not constitute financial planning or investment advisory services.”

[https://www.edwardjones.com/groups/ejw\\_content/@ejw/documents/web\\_content/web227570.pdf](https://www.edwardjones.com/groups/ejw_content/@ejw/documents/web_content/web227570.pdf)

## **UBS**

### **“Our Services as a Broker-Dealer and Relationship With You**

As a full-service broker-dealer, our services are not limited to taking customer orders and executing securities transactions. In this capacity, we provide a variety of services relating to investments in securities, including providing investment research, executing trades and providing custody services. In a brokerage account, you pay us commissions and applicable fees each time we execute a transaction in your account. We also make recommendations to our brokerage clients about whether to buy, sell or hold securities. We consider this to be part of our brokerage services and do not charge a separate fee for this advice. Our recommendations must be suitable for you, in light of your particular financial circumstances, goals and tolerance for risk.

When we work with you in our capacity as broker-dealer, we do not make investment decisions for you or manage your accounts on a discretionary basis. We will only buy or sell securities for brokerage clients based on specific directions from you.

### **Our Responsibilities to You as a Broker-Dealer**

When we act as your broker, we are subject to the Securities Exchange Act of 1934, the Securities Act of 1933, the rules of self-regulatory organizations such as the Financial Industry Regulatory Authority (FINRA), the rules of the New York Stock Exchange and applicable state laws.

The standards for broker-dealers include the following:

- As your broker-dealer, we have a duty to deal fairly with you. Consistent with our duty of fairness, we are obligated to make sure that the prices you receive when we execute transactions for you are reasonable and fair in light of prevailing market conditions and that the commissions and other fees we charge you are not excessive.
- We must have a reasonable basis for believing that any securities recommendations we make to you are suitable and appropriate for you, given your individual financial circumstances, needs and goals.
- We are permitted to trade with you for our own account (“principal trading”) or for an affiliate or another client and may earn a profit on those trades. When we engage in these trades, we disclose the capacity in which we acted on your confirmation, though we are not required to communicate this or obtain your consent in advance or to inform you of the profit earned on the trades.
- **When we act as your broker-dealer, we do not enter into a fiduciary relationship with you. Absent special circumstances, we are not held to the same legal standards that apply when providing investment advisory services.** Our legal obligations to disclose detailed information to you about the nature and scope of our business, personnel, fees, conflicts between our interests and your interests and other matters are more limited than when we are providing investment advisory services to you.

### **Principal Transactions; Client/Firm Relationship to IRA and QP Assets**

You understand that UBS or its affiliates may execute securities transactions in your Account acting as principal, as permitted by law, and you direct us to do so where we would execute such a trade as principal in the ordinary course of our business. Likewise, we may expressly direct our clearing affiliates to enter into a principal transaction when we would ordinarily execute a transaction as principal. Unless otherwise agreed to in writing, you agree that:

- Neither we nor our employees or agents agree that the guidance and information we provide may be used as a primary basis for investment or asset allocation decisions you make regarding your IRAs and QP assets. Therefore, none of these persons intends to provide “investment advice” as defined under applicable ERISA regulations or to act now or in the future as a “fiduciary” as defined in ERISA or the Internal Revenue Code or similar state or local laws, and;
- You will make your own independent decisions regarding investments in your Account.”

### **Merrill Lynch**

#### **“Limitation on Merrill Lynch's Responsibilities and Liability**

You agree that all orders placed through COE are at your sole risk and responsibility based on your own evaluation of your financial circumstances and investment objectives. COE may display on the order entry screen BofA Merrill Lynch Global Research's quality rating and investment opinion on companies, if available, as well as Independent Research opinions; however, such information and opinions by themselves do not constitute investment advice, or a solicitation or recommendation by us for the purchase or sale of any securities, or a representation that any securities are suitable for you. Neither Merrill Lynch nor any Other Persons shall have any liability for any investment decision made using such information or opinions.”

#### **“Quotes, News and Research; Use of Data and Information**

Quotes, news, research, ratings and other information provided through the Merrill Lynch Brokerage Website are obtained from sources we believe to be reliable, but we cannot guarantee the accuracy, timeliness or completeness of such information for any particular purpose. Such data and information and any BofA Merrill Lynch Global Research or Independent Research opinions provided do not constitute investment advice, or a solicitation by Merrill Lynch for the purchase or sale of any securities, or a representation that any securities are suitable for you.”

(Brokerage Website Agreement)

<https://olui2.fs.ml.com/Publish/Content/application/pdf/GWMOL/MerrillLynchBrokerageWebsiteTermsConditions.pdf>

### **Wells Fargo**

#### **“NO INVESTMENT ADVICE**

You understand and acknowledge that neither we nor our affiliates provide any investment recommendations in connection with your WellsTrade Account, nor do we give advice or offer any opinion with respect to the suitability, profitability or appropriateness for you of any security, investment, financial product or investment strategy. You understand and acknowledge that you are responsible for determining whether a security transaction or strategy is suitable for you. All transactions will be done only on your order or the order of your authorized delegate, except as otherwise provided in this Agreement.”

“Neither we nor our Affiliates shall be obligated to update information or opinions regarding any company or security. The Research Reports are not intended to provide tax, legal or investment advice. We and our Affiliates shall not be liable for any consequential, incidental, special, or indirect damage (including, but not limited to, lost profits, trading losses and damages) that may result from use of the Research Reports or for omissions or inaccuracies of the information contained in them.”

Tim,

Here are some additional links to certain NASD/FINRA materials we have mentioned during our recent calls. We thought these might be helpful in case you have not seen some of these items.

- Certain FINRA rules pertaining to arbitration and class actions, as well as a related FINRA decision:
  - [FINRA Rule 12200 \(Arbitration Under an Arbitration Agreement or the Rules of FINRA\)](#)
  - [FINRA Rule 12204 \(Class Action Claims\)](#)
  - [FINRA Rule 2268\(f\) \(Requirements When Using Pre-dispute Arbitration Agreements for Customer Accounts\)](#)
  - FINRA's Board of Governors' decision from April 24, 2014 concerning FINRA's rules related to class actions: [FINRA's Board of Governors' Decision](#)
- Certain materials discussing, among other things, the interplay between FINRA's suitability rule and FINRA's exemption for certain categories of educational material:
  - [FINRA Rule 2111, Supplementary Material .03](#)
  - [NASD Notice to Members 01-23](#)
  - FINRA Regulatory Notices:
    - [12-55 Guidance on FINRA's Suitability Rule](#)
    - [12-25 Additional Guidance on FINRA's New Suitability Rule; Implementation Date: July 9, 2012](#)
    - [11-25 New Implementation Date for and Additional Guidance on the Consolidated FINRA Rules Governing Know-Your-Customer and Suitability Obligations; Implementation Date: July 9, 2012](#)
    - [11-02 SEC Approves Consolidated FINRA Rules Governing Know-Your-Customer and Suitability Obligations; Effective Date: October 7, 2011](#)

Again, please let us know how we can provide further assistance to you.

Regards,  
Jen

**Links to certain firms' compensation-related disclosures and, for some firms, their separate revenue sharing disclosures:**

Staff pulled a random sampling of brochures that we thought may be of interest based on Friday's conversation. That being said, firms generally have a variety of brochures addressing a number of different areas on their websites (with more or less detail). If you are interested in something different than is captured below, we would suggest referring to each firm's website to see if there is something more on point.

Tim,

Thank you for the link to the FSR document. We did see it already, but I appreciate your email to make sure.

I hope all is well with you too, and that you enjoy the weekend!

Jen

Just thought I'd pass along this FSR document (prepared by Debevoise) that's making the rounds in the unlikely event that you haven't already seen it: <http://fsroundtable.org/debevoise-memo-fsr-dol-fiduciary-duty/>.

I hope you're doing well.

Tim

Tim, our staff have finished reviewing the charts that you sent. Are you available on Friday to discuss our comments? It looks like the following times could work for us: 10:30-11:30, 12:30-1:30 or 3:30 to 5.

I am out of the office next week. If none of these times work for you, we can schedule something the week of August 25. Please let me know your preference.

Thanks,  
Jen

Jennifer,

I enjoyed talking with you, Craig and the others Friday morning. Here is our working bibliography of papers that might be relevant to assessing the impact of our NPRM redefining what is fiduciary investment advice under ERISA and related tax code provisions. The first few pages list the papers, and the following pages provide the abstracts. I look forward to future consultations on our respective work in this area.

Best,

Joe P.

To obtain more funds from the institutional investors, private equity fund managers may report inflated valuations of private investee companies that are not yet sold. However, such overvaluations may result in a reputational cost when those investments are realized. Using evidence from 39 countries, we show that there are significant systematic biases in managers' reporting of fund performance. We find that these biases depend on the accounting and legal environment in a country, and on proxies for the degree of information asymmetry between institutional investors and private equity fund managers.

What Brokers Provide and load versus no-load

AARP, “AARP Bulletin on Retirement Savings: Executive Summary”, April 2009

Summary: The AARP Bulletin commissioned a nationwide survey in February 2009 to find out if and how Americans are changing their general savings and retirement savings behaviors. It also explored whether people plan to save or spend the 2009 stimulus payout. This executive summary reports that:

- Most adults have started to cut back on spending or save more money in the past 12 months.
- The most popular reason for cutting back on spending or saving more is to have more money available in case of an emergency.
- Of those who have started cutting back on spending or saving more, 73 percent are doing so in order to save more money for retirement.
- Approximately half (51%) indicate that they (or their spouse or partner) are saving for retirement.
- The most common types of accounts utilized for retirement savings remain the 401(k) and IRA.
- Of those currently saving for retirement, recent savings changes include putting less money into retirement accounts and moving savings into less risky investments.
- Almost two-thirds of respondents (63%) plan to spend at least some of the 2009 stimulus benefit.

Association of British Insurers “Increasing Consumer Access to Advice” May 2010.

The ABI commissioned research to look at the cost of full advice and how consumers prefer to access investment products. The research found that as full advice costs £670 in total, it is beyond the reach of about two-thirds of the UK adult population. The ABI has therefore developed proposals for a new financial advice process which is automated and driven by IT. This is designed to serve consumers who cannot afford, or do not require, the level of service offered by full advice.

Babcock, Linda, Xianghong Wang, and George Loewenstein. “Choosing the Wrong Pond: Social Comparisons in Negotiations that Reflect a Self-Serving Bias,” *The Quarterly Journal of Economics*. February 1996.

Abstract: We explore the role that choice of comparison groups plays in explaining impasse in teacher contract negotiations. We hypothesize that the negotiators select “comparable” districts in a biased fashion such that teachers’ salaries in districts that unions view as comparable are higher than teachers’ salaries in districts that school boards view as comparable. We also predict that strike activity is positively related to the difference in the salary levels of the unions’ and boards’ lists of comparables. We test these predictions using a unique combination of subjective survey and field data on the teacher contract negotiations in Pennsylvania. Both hypotheses are supported by the data.

Bahar, Rashid and Luc Thévenoz. “Conflicts of Interest: Disclosure, Incentives, and the Market” *CORPORATE GOVERNANCE & FINANCIAL MARKETS*, Luc Thévenoz and Rashid Bahar eds., Kluwer Law International and Schulthess, 2007

Abstract: *Conflicts of interest* presents the results of a two-year-long research project bringing together academics and practitioners in both law and finance from Europe and the U.S. under the auspices of the Centre for Banking and Financial law of the University of Geneva. This book discusses the following issues: the duty of loyalty, remedies, such as disclosure, incentives. Organizational measures, regulation and enforcement and market considerations.

Baker, Laurence. "Acquisition Of MRI Equipment By Doctors Drives Up Imaging Use And Spending" *Health Affairs*, 29, no.12 (2010):2252-2259

Some orthopedists and neurologists acquired their own magnetic resonance imaging (MRI) equipment during the early 2000s. This paper examines changes in imaging use and in overall spending by patients of orthopedists and neurologists who began billing for MRI scans between 1999 and 2005. Results show that physicians ordered substantially more scans once they began billing for MRI. For example, after orthopedists began billing for MRI, the number of MRI procedures used within thirty days of a first visit increased by about 38 percent. Not only did MRI spending increase for their patients, but spending for other aspects of care rose as well. Attention should be paid to ensuring that advanced medical equipment acquired in physician practices is used appropriately.

Barber, Brad, Terrance Odean and Lu Zheng. "Out of Sight, Out of Mind: The Effects of Expenses on Mutual Fund Flows" *Journal of Business*, vol. 78, no. 6, 2005.

Abstract: We argue that the purchase decisions of mutual fund investors are influenced by salient, attention-grabbing information. Investors are more sensitive to salient in-your-face fees, like front-end loads and commissions, than operating expenses; they are likely to buy funds that attract their attention through exceptional performance, marketing, or advertising. Our empirical analysis of mutual fund flows over the last 30 years yields strong support for our contention. We find consistently negative relations between fund flows and front-end load fees. We also document a negative relation between fund flows and commissions charged by brokerage firms. In contrast, we find no relation (or a perverse positive relation) between operating expenses and fund flows. Additional analyses indicate that mutual fund marketing and advertising, the costs of which are often embedded in a fund's operating expenses, account for this surprising result.

Barber, Brad, Reuven Lehavy and Brett Trueman. "Comparing the Stock Recommendation Performance of Investment Banks and Independent Research Firms," *Journal of Financial Economics*, Vol. 85, 2007.

Abstract: From January 1996 through June 2003, the average daily abnormal return to independent research firm buy recommendations exceeds that of investment bank buy recommendations by 3.1 basis points (almost 8 percentage points annualized). Investment bank buy recommendation underperformance is more pronounced following the NASDAQ market peak (March 10, 2000) and strikingly so for buy recommendations on firms that recently conducted equity offerings. In contrast, investment bank hold and sell recommendations outperform those of independent research firms by 1.8 basis points daily (4.5 percentage points annualized). These results suggest reluctance by investment banks to downgrade stocks whose prospects dimmed during the bear market of the early 2000s, as claimed in the SEC's Global Research Analyst Settlement.

Barber, Brad and Terrance Odean. "The Behavior of Individual Investors" June 2011 Available at SSRN: <http://ssrn.com/abstract=1872211>

Barber, Brad M. and Odean, Terrance, The Behavior of Individual Investors (June 24, 2011). Available at SSRN: <http://ssrn.com/abstract=1872211> Abstract: We review research on the behavior of individual investors with a focus on investments in and the trading of individual stocks.

Barnard, Jayne. "Deception, Decisions and Investor Education" 2008. Barnard, Jayne W., "Deception, Decisions, and Investor Education". *17 Elder Law Journal*. Paper 4, 2009.

Abstract: Tens of millions of dollars each year are spent on investor education. Because older adults (those aged sixty and older) are disproportionately victims of investment fraud schemes, many educational programs are targeted at them. In this Article, Professor Barnard questions the effectiveness of these programs. Drawing on recent studies from marketing scholars, neurobiologists, social psychologists, and behavioral economists examining the ways in which older adults process information and make decisions,

she offers a model of fraud victimization (the "deception/decision cycle") that explains why older adults are often vulnerable to investment fraud schemes. She then suggests that many of the factors that contribute to fraud victimization are unlikely to be influenced by fraud prevention education. She also recommends alternative uses for the money now spent on fraud prevention education that would better achieve the goal of protecting older investors.

[Battalio, Robert and Tim Loughran. "Does Payment for Order Flow to Your Broker Help or Hurt You," \*Journal of Business Ethics\*, vol 80, no. 1, 2008 .](#)

Abstract: The presumption is that a broker executing a stock trade for a retail investor will get the investor the best possible price execution for the transaction. In fact, the broker often sells the retail investor's trade to an intermediary for cash payment. The broker's motivation to generate dealer profits seems to overcome the broker's fiduciary responsibility to obtain the best execution price for the customer, raising ethical questions. Purchasers and internalizers of order flow in the market may cause prices quoted on the NYSE to deteriorate, making all investors worse off.

[Bazerman, Max and George Loewenstein. "Take the Bias out of Bean Counting," \*Harvard Business Review\*, January 2001.](#)

Abstract: The article comments on a proposal by the U.S. Securities and Exchange Commission that would put formal restrictions on specific consulting services that accounting firms can provide. The firms have protested any change because they insist that the integrity and professionalism of their personnel will prevent them from violating the existing rules. However, the author's opinion is that the proposed regulations could reduce conflict of interest and bias in the accounting profession and also ensure impartiality among auditors.

[Bazerman, Max, George Loewenstein and Don Moore. "Why Good Accountants Do Bad Audits" \*Harvard Business School Review\*. Nov. 2002.](#)

Abstract: On July 30, President Bush signed into law the Sarbanes-Oxley Act addressing corporate accountability. A response to recent financial scandals, the law tightened federal controls over the accounting industry and imposed tough new criminal penalties for fraud. The president proclaimed, "The era of low standards and false profits is over." If only it were that easy. The authors don't think corruption is the main cause of bad audits. Rather, they claim, the problem is unconscious bias. Without knowing it, we all tend to discount facts that contradict the conclusions we want to reach, and we uncritically embrace evidence that supports our positions. Accountants might seem immune to such distortions because they work with seemingly hard numbers and clear-cut standards. But the corporate-auditing arena is particularly fertile ground for self-serving biases. Because of the often subjective nature of accounting and the close relationships between accounting firms and their corporate clients, even the most honest and meticulous of auditors can unintentionally massage the numbers in ways that mask a company's true financial status, thereby misleading investors, regulators, and even management. Solving this problem will require far more aggressive action than the U.S. government has taken thus far. What's needed are practices and regulations that recognize the existence of bias and moderate its effects. True auditor independence will entail fundamental changes to the way the accounting industry operates, including full divestiture of consulting and tax services, rotation of auditing firms, and fixed-term contracts that prohibit client companies from firing their auditors. Less tangibly, auditors must come to appreciate the profound impact of self-serving biases on their judgment. INSET: Ambiguity in Accounting and Auditing.

[Bergstresser, Daniel, John Chalmers, and Peter Trufano. "Assessing the Costs and Benefits of Brokers in the Mutual Fund Industry," \*The Review of Financial Studies\*, 2009.](#)

Abstract: Many investors purchase mutual funds through intermediated channels, paying brokers or financial advisors for fund selection and advice. This article attempts to quantify the benefits that investors enjoy in exchange for the costs of these services. We study broker-sold and direct-sold funds from 1996 to 2004, and fail to find that brokers deliver substantial tangible benefits. Relative to direct-sold funds, broker-sold funds deliver lower risk-adjusted returns, even before subtracting distribution costs. These results hold across fund objectives, with the exception of foreign equity funds. Further, broker-sold funds exhibit no more skill at aggregate-level asset allocation than do funds sold through the direct channel. Our results are

consistent with two hypotheses: that brokers deliver substantial intangible benefits that we do not observe and that there are material conflicts of interest between brokers and their clients.

Bergstresser, Daniel B. and Poterba, James M., Do After-Tax Returns Affect Mutual Fund Inflows? (February 2000). AFA 2001 New Orleans. Available at SSRN: <http://ssrn.com/abstract=253914> or doi:10.2139/ssrn.253914

This paper explores the relationship between the after-tax returns that taxable investors earn on equity mutual funds and the subsequent cash inflows to these funds. Previous studies have documented that funds with high pretax returns attract greater inflows. This paper investigates the relative predictive power of pre-tax and after-tax returns for explaining annual fund inflows. The empirical results, based on a large sample of equity mutual funds over the period 1993-1998, suggest that after-tax returns have more explanatory power than pretax returns in explaining inflows. In addition, funds with large "overhangs" of unrealized capital gains experience smaller inflows, all else equal, than funds without such unrealized gains. By disaggregating net fund inflows into gross inflows and gross redemptions, the paper also provides some insight on how after-tax returns and prospective capital gain realizations affect investor behavior.

Berk, Jonathan and Richard Green. "Mutual Fund Flows and Performance in Rational Markets" *The Journal of Political Economy*, Vol 112, no. 6, 2004.

Abstract: We derive a parsimonious rational model of active portfolio management that reproduces many regularities widely regarded as anomalous. Fund flows rationally respond to past performance in the model even though performance is not persistent and investments with active managers do not outperform passive benchmarks on average. The lack of persistence in returns does not imply that differential ability across managers is nonexistent or unrewarded or that gathering information about performance is socially wasteful. The model can quantitatively reproduce many salient features in the data. The flow-performance relationship is consistent with high average levels of skills and considerable heterogeneity across managers.

Bernicke, Ty A. "The Real Cost of Owning a Mutual Fund" April 4, 2011. [Forbes.com](http://www.forbes.com)  
<http://www.forbes.com/2011/04/04/real-cost-mutual-fund-taxes-fees-retirement-bernicke.html>

In over 25 years of business, our firm has never had an initial meeting with an investor who completely understood the total costs of the mutual funds they owned. The following article seeks to simplify the many complexities of mutual fund expenses so investors are able to discover the true costs associated with mutual fund ownership. To simplify this topic, six different costs will be evaluated: expense ratio, transaction costs (brokerage commissions, market impact cost, and spread cost), tax costs, cash drag, soft dollar cost and advisory fees.

Bertrand, Marianne and Adair Morse. "Information Disclosure, Cognitive Biases and Payday Borrowing" University of Chicago Working Paper. October 2009.

Abstract: If people face cognitive limitations or biases that lead to financial mistakes, what are possible ways lawmakers can help? One approach is to remove the option of the bad decision; another approach is to increase financial education such that individuals can reason through choices when they arise. A third, less discussed, approach is to mandate disclosure of information in a form that enables people to overcome limitations or biases at the point of the decision. This third approach is the topic of this paper. We study whether and what information can be disclosed to payday loan borrowers to lower their use of high-cost debt via a field experiment at a national chain of payday lenders. We find that information that helps people think less narrowly (overtime) about the cost of payday borrowing, and in particular information that reinforces the adding-up effect over pay cycles of the dollar fees incurred on a payday loan, reduces the take-up of payday loans by about 10 percent in a 4 month-window following exposure to the new information. Overall, our results suggest that consumer information regulations based on a deeper understanding of cognitive biases might be an effective policy tool when it comes to regulating payday borrowing, and possibly other financial and non-financial products.

Beshears, John, James Choi, David Laibson and Brigitte Madrian. "How does simplified disclosure affect individuals' mutual fund choices?" Working Paper No. 14859. Cambridge, MA: National Bureau of Economic Research.

Abstract: We use an experiment to estimate the effect of the SEC's Summary Prospectus, which simplifies mutual fund disclosure. Our subjects chose an equity portfolio and a bond portfolio. Subjects received either statutory prospectuses or Summary Prospectuses. We find no evidence that the Summary Prospectus affects portfolio choices. Our experiment sheds new light on the scope of investor confusion about sales loads. Even with a one-month investment horizon, subjects do not avoid loads. Subjects are either confused about loads, overlook them, or believe their chosen portfolio has an annualized log return that is 24 percentage points higher than the load-minimizing portfolio

Bharath, Sreedhar, Sandeep Dahiya, Anthony Saunders and Anand Arinivasan. "So What Do I Get? The Bank's View of Lending Relationships," *Journal of Financial Economics*, Vol 85, 2007.

Abstract: While many empirical studies document borrower benefits of lending relationships, less is known about lender benefits. A relationship lender's informational advantage over a non-relationship lender may generate a higher probability of selling information-sensitive products to its borrowers. Our results show that the probability of a relationship lender providing a future loan is 42%, while for a non-relationship lender, this probability is 3%. Consistent with theory, we find that borrowers with greater information asymmetries are significantly likely to obtain future loans from their relationship lenders. Relationship lenders are likely to be chosen to provide debt/equity underwriting services, but this effect is economically small.

Bluethgen, Ralphm Andreas Gintschel, Andreas Hackethal, and Armin Muller. "Financial Advice and Individual Investors' Portfolios,"

Abstract: This paper is an early response to Campbell's (2006) call to analyze the role of financial intermediaries in household finance. We first sketch a basic theory of financial advice that proceeds from cognitive errors and costly information acquisition. We then derive hypotheses about honest and deceptive financial advice and test them on a unique administrative dataset from a large German retail bank. We find that the clients advised are older, wealthier, more risk averse and more likely to be female. Financial advice enhances portfolio diversification, makes investor portfolios more congruent with predefined model portfolios, and increases investors' fee expenses. Our empirical evidence is broadly in line with honest financial advice. A general implication of the paper is that financial advisory service has a significant impact on household investment behavior and that it deserves more attention in future research on household finance.

Bluethgen, Ralph, Steffen Meyer, and Andreas Hackethal. "High Quality Financial Advice Wanted", Available at <http://tofeeornottofee.com/Charateristics%20of%20a%20good%20Financial%20Planner.pdf>

Abstract: Many private investors rely on the recommendations of professional financial advisors when making investment decisions. However, financial advice is a credence good and its quality is notoriously difficult to assess even ex-post. This paper aims to shed light on financial advisor characteristics that might serve as quality indicators. We surveyed 260 German independent financial advisors (IFA) and obtain three main findings. Firstly, there is a high degree of heterogeneity in quality among financial advisors. Secondly, the extent to which advisors receive compensation in the form of fixed fees instead of sales commissions as well as the extent to which advisors exhibit a high degree of rationality in decision making are predictive of high-quality financial advice. Taking the compensation scheme and rationality into account when selecting a financial advisor might therefore improve the investment decisions of households.

Bolton, Patrick, Xavier Freixas and Joel Shapiro. "Conflicts of Interest, information provision, and competition in the financial services industry" *Journal of Financial Economics*. 85 2007.

Abstract: In some markets sellers have better information than buyers over which products best serve a buyer's needs. Depending on the market structure, this may lead to conflicts of interest in the provision of information by sellers. This paper studies this issue in the market for financial services. The analysis presents a new model of competition between banks, where price competition influences the ensuing incentives for truthful information revelation. We also compare conflicts of interest in two different firm structures, specialized banking and one-stop banking.

Borzi, Phyllis and Martha Patterson. "Regulating Markets for Retirement Payouts: Solvency, Supervision and Credibility," Prepared for presentation at the Pension Research Council Symposium, April 2007.

Abstract: Soon the largest cohort of workers in U.S. history will be eligible to retire. Most will have only their personal saving and a lump-sum benefit from a 401(k) plan to supplement Social Security benefits during retirement. The proceeds of these 401(k) and IRA benefits represent the largest amount of money these individuals have ever managed, and the challenges and hazards they face are enormous. This chapter evaluates the regulatory and enforcement structures in place to protect individuals from financial loss through the insolvency, fiscal mismanagement, and/or malfeasance of those who help them manage and invest their retirement distributions.

Bradley, Daniel and Jack G. Wolf. *Analyst Behavior Surrounding Tender Offer Announcements*” *Journal of Financial Research*, 2007, vol. 30, issue 1, pages 1-19

We examine the usefulness and credibility of analyst recommendations by focusing on their behavior surrounding tender offer announcements. For our 1998-2001 sample, we find analysts did not identify takeover targets through their recommendations nor did they distinguish between wealth-increasing and wealth-decreasing tender offers. We find some evidence of conflicts of interest in analyst recommendations, but it is confined to the 1999-2000 dot-com period. However, the long-run performance following recommendations suggests that these conflicts have little ultimate cost to investors. 2007 The Southern Finance Association and the Southwestern Finance Association

Brandon, Emily. “Rethinking 401(k) Rollovers” *U.S. News and World Report*, July 28, 2009.  
<http://money.usnews.com>

Abstract: Conventional retirement wisdom tells us that when you leave a job, you should roll over your 401(k) to an IRA. Rollovers allow you to continue delaying taxes on your nest egg as it accumulates and avoid an early-withdrawal penalty. But if you have an especially good 401(k) with your old company, it may be better to leave your retirement money there or roll it over into your new company's 401(k).

Bricker, Jesse, Bucks, Brian, Kennickell, Arthur B., Mach, Traci and Moore, Kevin B., *Drowning or Weathering the Storm? Changes in Family Finances from 2007 to 2009* (April 2011). NBER Working Paper Series, Vol. w16985, pp. -, 2011. Available at SSRN: <http://ssrn.com/abstract=1825767>

In 2009, the Federal Reserve Board implemented a survey of families that participated in the 2007 Survey of Consumer Finances (SCF) to gain detailed information on the effects of the recent recession on all types of households. Using data from the 2007–09 SCF panel, we highlight the variation in households’ financial experiences by examining the distribution of changes in families’ balance sheets. Further, we use information on changes in families’ saving, investing, and spending behavior to consider the potential longer-term consequences of the current recession on households’ finances and decisions. Most families experienced a decline in wealth between 2007 and 2009, but many families saw only small changes on net, and others saw substantial increases in their wealth. This pattern of gains and losses typically holds within demographic groups. Changes in families’ wealth over the period appear to reflect changes in asset values (particularly the value of homes, stocks, and businesses) rather than changes in the level of ownership of assets and debts or in the amount of debt held. On the whole, families appear more cautious in 2009 than in 2007, as most families reported greater desired buffer savings, and many expressed concern over future income and employment.

Brown, Stewart L., *Are Mutual Fund Investment Advisory Fees Determined Competitively?* (May 07, 2011). Available at SSRN: <http://ssrn.com/abstract=1834783>

Investment advisors hold mutual funds captive, despite creating and managing them, giving rise to a conflict of interest. Prior research demonstrated that open end mutual funds overcharge customers by about 25 basis points annually for standard services as compared to similar services provided to public pension funds with no conflicts of interest. This overcharging yields about \$27.5 billion in excess fees annually.

The Investment Company Institute sponsored research that argued that investment advisory fees are determined competitively due to relatively free entry and large numbers of buyers and sellers of mutual funds. That research argued that competitively determined fees cannot be excessive.

A hallmark of competitive industries is that they earn normal profits and normal rates of return for their shareholders. Using the Fama-French methodology, this paper demonstrates that fund sponsors have earned very high and statistically significant excess returns for their shareholders over the last 25 years and subsequent shorter periods. In 1985, a \$100 investment in a capitalization weighted index of fund sponsors would have been worth in excess of \$21,000 by the end of 2009, while a similar investment in S&P 500 stocks would have been worth only about \$1,200 over the same time period. The paper concludes that fund sponsors have systematically violated fiduciary standards.

[Bullard, Mercer, Friesen, Geoffrey C. and Sapp, Travis. "Investor Timing and Fund Distribution Channels" SSRN Working Paper, June 2008. Available at SSRN: <http://ssrn.com/abstract=1070545>](http://ssrn.com/abstract=1070545)

Abstract: This study examines the investment timing performance of equity mutual fund investors and its relationship to the distribution arrangement of the fund. We find that investors who transact through investment professionals using conventional distribution arrangements experience substantially poorer timing performance than investors who purchase pure no-load funds. Investors in all three principal load-carrying retail share classes (A, B, and C) significantly underperform a buy-and-hold strategy. Among all load funds, Class B investors suffer from the poorest cash flow timing, underperforming a buy-and-hold strategy by 2.28% annually, compared with annual underperformance of 0.78% for investors in pure no-load funds. No-load index funds are the only funds found to show no evidence of poor investor timing. We discuss several potential explanations for the poorer timing performance of investors in load funds, such as broker incentives, fund advertising, and investor return-chasing behavior.

[Cain, Daylian, George Loewenstein and Don Moore "Coming Clean, but Playing Dirtier: The shortcomings of disclosure as a solution to conflicts of interest" \*Conflicts of Interest: Challenges and Solutions in Business, Law, Medicine, and Public Policy\* edited by Don A. Moore, Daylian M. Cain, George Loewenstein, Max H. Bazerman.](#)

Abstract: Although disclosure is ubiquitous as a response to conflicts of interest, we suggest that it can have perverse effects. We show that disclosure can fail both because (1) although it may encourage the audience to discount advice, disclosed as problematic such discounting tends to be insufficient, and (2) it can lead advisors to give even more biased advice than they otherwise would. As a result, when an advisor's conflict of interest is disclosed, recipients of advice may be left worse off and providers of advice better off. We review existing psychological evidence that hints at the possibility that disclosure could be ineffective or even backfire, and then describe our own research which actually documents such perverse effects. We conclude that successful responses to conflicts of interest require more robust interventions than merely disclosing the conflicts.

[Cain, Daylian, George Loewenstein and Don Moore. "The Dirt on Coming Clean: Perverse Effects of Disclosing Conflicts of Interest" \*Journal of Legal Studies\*, vol. 34, January 2005.](#)

Abstract: Conflicts of interest can lead experts to give biased and corrupt advice. Although disclosure is often proposed as a potential solution to these problems, we show that it can have perverse effects. First, people generally do not discount advice from biased advisors as much as they should, even when advisors' conflicts of interest are disclosed. Second, disclosure can increase the bias in advice because it leads advisors to feel morally licensed and strategically encouraged to exaggerate their advice even further. As a result, disclosure may fail to solve the problems created by conflicts of interest and may sometimes even make matters worse.

[Cain, Daylian, George Loewenstein and Don Moore. "When Sunlight Fails to Disinfect: Understanding the Perverse Effects of Disclosing Conflicts of Interest" \*Journal of Consumer Research\*, Vol. 37, February 2011](#)

Abstract: Disclosure is often proposed as a remedy for conflicts of interest, but it can backfire, hurting those whom it is intended to protect. Building on our prior research, we introduce a conceptual model of disclosure's effects on advisors and advice recipients that helps to explain when and why it backfires. Studies 1 and 2 examine psychological mechanisms (strategic exaggeration, moral licensing) by

which disclosure can lead advisors to give more-biased advice. Study 3 shows that disclosure backfires when advice recipients who receive disclosure fail to sufficiently discount and thus fail to mitigate the adverse effects of disclosure on advisor bias. Study 4 identifies one remedy for inadequate discounting of biased advice: explicitly and simultaneously contrasting biased advice with unbiased advice.

Calcagano, Riccardo and Chiara Monticone. "Financial Literacy and the Demand for Financial Advice", July 2011. Available at SSRN: [http://papers.ssrn.com/sol3/papers.cfm?abstract\\_id=1884813](http://papers.ssrn.com/sol3/papers.cfm?abstract_id=1884813)

Abstract: The low level of financial literacy in many countries suggests that households are at risk of sub-optimal financial decisions. In this paper we assess to what extent financial advisors can substitute for the households' lack of financial knowledge, by analyzing the effect of investors' financial literacy on their decision about how much to rely on financial advisors. We model the strategic interaction between poorly informed investors and better informed advisors facing conflict of interests. We find that advisors reveal information only to the more knowledgeable investors, who anticipating that are more likely to consult advisors. Investors with lower financial literacy either invest by themselves (without any professional advice) or delegate their portfolio choice completely, suffering the agency costs of such decision. These results are confirmed empirically, where we investigate the effect of financial literacy on the demand for financial advice using the 2007 Unicredit Customers' Survey. Overall, our results suggest that non-independent advisors are not sufficient to alleviate the problem of low financial literacy.

Carow, Kenneth, Steven Cox and Dianne Rhoden. "The Role of Insider Influence in Mutual-to-Stock Conversions" *Journal of Money, Credit and Banking* Volume 39, Issue 6, pages 1285–1304, September 2007

Abstract: Using a sample of 347 demutualizing thrifts from 1991 to 2004, we show that the level of inside participation is not a traditional signal of firm performance. We conclude that unanticipated inside participation reflects the incentives of insiders to reduce the size of the offer to influence the level of expected initial public offer (IPO) returns. We find unanticipated inside participation is related to lower offer size and higher initial returns, but we do not find a relationship between inside participation and post-IPO performance. Copyright 2007 The Ohio State University.

Cashman, George, Daniel Deli, Federico Nardari and Sriram Villupuram. "Investor Behavior in the Mutual Fund Industry: Evidence from Gross Flows," February 2007. Available at <http://ssrn.com/abstract=966360>

Abstract: Using a large sample of monthly gross flows from 1997 to 2003, we uncover several previously undocumented regularities in investor behavior. First investor purchases and sales produce fund-level gross flows that are highly persistent. Persistence in fund flows dominates performance as a predictor of future fund flows. Also, failing to account for flow persistence leads to incorrect inferences with respect to the relation between performance and flows. Second, we document that investors react differently to performance depending on the type of fund, and that investor trading activity produces meaningful differences in the persistence of fund flows across mutual fund types. Third, at least some investors appear to evaluate and respond to mutual fund performance over much shorter time spans than previously assessed. Additionally, we document differences in the speed and magnitude of investors' purchase and sales responses to performance.

Cavezzali, Elisa and Ugo Rigoni. "Investor Profile and Asset Allocation Advice," October 2007. Available at SSRN: <http://ssrn.com/abstract=966178>

Abstract: An asset allocation recommendation depends on the market forecasts and the individual characteristics of the investor. The existing scientific literature is focused on market forecasts, while the investor profile is shortly depicted, usually resorting to a hypothetical one, for instance identified by adjectives such as conservative, moderate, aggressive. On the contrary, we take a richer picture of the investor profile, because we think that only a tailor made advice can really add value for the clients.

Our dataset is composed by 420 advice, issued by 135 money managers and professionals during a 5 years period, from 1998 to 2003, in the most important Italian financial newspaper (Il Sole 24 Ore) for the benefit of individual investors who had written the newspaper's editorial office giving a rich description of their personal profile. About 30% of the advisors are not Italian ones working for international securities brokers and investment banks.

Our study contributes to understand how advisors transfer the investor's characteristics into the investment process. Even though we found some results contradicting the well known normative models, such as the CAPM, we think that many properties of the asset allocation proposals are consistent with the purpose to issue tailor made advice which are not too far from optimizing targets. Some drawbacks come out as well: for instance the importance of the investor's borrowing is overlooked. Moreover the relationship between home bias, that is the overweight of the domestic stocks, and the investor's profile looks inconsistent with the principle of acting as professionals who try to reconcile the normative rules, optimizing from a theoretical point of view, but unacceptable and not well understood by the client, with the behavior of individual investors.

Chakravarty, Sugato and Asani Sarker. "Can Competition Between Brokers Mitigate Agency Conflicts with Their Customers?" *Federal Reserve Bank of New York Working Paper, No. 9705, February 1997.*

Abstract: We study competitive, but strategic, brokers executing trades for an informed trader in multi-period setting. The brokers can choose to (a) execute the order, as agents, first, and trade for themselves as dealers, afterwards; or (b) trade for themselves first and execute the order later. We show that the equilibrium outcome depends on the number of brokers. When the number of brokers exceeds a critical number (greater than one), the informed trader distributes his order (equally) among the available brokers. The brokers, in turn, execute the informed trader's order first and trade personal quantities, as dealers, afterwards. When the number of brokers is below this critical value, the informed trader gives his order to a single broker, who, in turn, trades personal quantities as a dealer first and executes the informed trader's order second. Since the informed trader is hurt in the latter case, he prefers markets with many brokers. Thus, regulators can mitigate trading abuses arising from a conflict of interest between brokers as an alternative to banning such practices. We empirically show that the critical number of brokers for the favorable competitive equilibrium appears to be satisfied for the futures contracts in our sample.

Chalmers, John and Jonathan Reuter. "What is the Impact of Financial Advisors on Retirement Portfolio Choices and Outcomes," Available at <http://ssrn.com/abstract=1785833>.

Abstract: We study choices and outcomes in the Oregon University System's Optional Retirement Plan (ORP). ORP participants can choose to invest through a firm that uses brokers to provide personal face-to-face financial services, or through three lower-service firms. We find that younger, less highly educated, and less highly paid employees are more likely to invest through a broker, which suggests that demand for broker services is higher among those with lower levels of financial literacy. We also find significant differences in portfolio choice and outcomes. Broker clients allocate their retirement contributions across a larger number of investments, are less likely to remain fully invested in the default investment option, and less likely to change their equity allocation during the recent financial crisis. However, the portfolios of broker clients are significantly riskier, and underperform by approximately 2 percent per year on a risk-adjusted basis. Although we cannot conclude that those investing through a broker would have been better off investing on their own, our findings suggest that brokers are a costly and imperfect substitute for financial literacy

Chetty, Raj, Adam Looney, and Kory Krogt "Salience and Taxation: Theory and Evidence" *American Economic Review*, 99:4, 2009

Abstract: Using two strategies, we show that consumers underreact to taxes that are not salient. First, using a field experiment in a grocery store, we find that posting tax-inclusive price tags reduces demand by 8 percent. Second, increases in taxes included in posted prices reduce alcohol consumption more than increases in taxes applied at the register. We develop a theoretical framework for applied welfare analysis that accommodates salience effects and other optimization failures. The simple formulas we derive imply that the economic incidence of a tax depends on its statutory incidence, and that even policies that induce no change in behavior can create efficiency losses.

Chevalier, Judith and Glenn Ellison. "Risk Taking by Mutual Funds as a Response to Incentives" *Journal of Political Economy*, vol. 105 no. 6, 1997.

Abstract: This paper examines a potential agency conflict between mutual fund investors and mutual fund companies. Investors would like the fund company to use its judgment to maximize risk-adjusted fund returns, the fund company has an incentive to increase the inflow of investments. The authors estimate the

shape of the flow-performance relationship for a sample of growth and growth and income funds observed over the 1982-92 period. The shape creates incentives for fund managers to alter the riskiness of their portfolios. Examining portfolio holdings, the authors find that risk levels are changed toward the end of the year in a manner consistent with these incentives.

Choi, James, David Laibson, Brigitte Madrian and Andrew Metrick. "Reinforcement Learning and Investor Behavior" *Journal of Finance*. Vol 64, No. 6, December 2009.

**Abstract:** What affects individual investors' willingness to invest in an asset? This paper presents evidence that — when there is no salient reference purchase price — investors tend to be return chasers and variance avoiders with respect to their idiosyncratic history with the asset. Using administrative panel data on 25,000 401(k) accounts at five firms, we find that an investor's 401(k) contribution rate increases more if she has recently experienced a higher 401(k) portfolio return and/or a lower 401(k) return variance. We find no evidence that this behavior is welfare-improving. These results are explained by a naïve reinforcement learning heuristic: investors expect that investments in which they experienced past success will be successful in the future, whether or not such a belief is logically justified. Consistent with reinforcement learning's Power Law of Practice, return chasing and variance avoidance diminish with age.

Choi, James David Laibson, and Brigitte Madrian, "Why does the law of one price fail? An experiment on index mutual funds," forthcoming, *Review of Financial Studies*.

**Abstract:** We evaluate why individuals invest in high-fee index funds. In our experiments, subjects each allocate \$10,000 across four S&P 500 index funds and are rewarded for their portfolio's subsequent return. Subjects overwhelmingly fail to minimize fees. We reject the hypothesis that subjects buy high-fee index funds because of bundled non-portfolio services. Search costs for fees matter, but even when we eliminate these costs, fees are not minimized. Instead, subjects place high weight on annualized returns since inception. Fees paid decrease with financial literacy. Interestingly, subjects who choose high-fee funds sense they are making a mistake.

Choi, James, David Laibson and Brigitte Madrian. "Are Empowerment and Education Enough? Underdiversification in 401(k) Plans" *Brookings Papers on Economic Activity* 2005, pp. 151-198.

**Abstract:** Current and former employees of the energy trading company Enron Corporation held \$2.1 billion in the firm's 401(k) retirement savings plan. Sixty-two percent of that money was invested in Enron stock, then trading at \$83 a share. In October 2001 Enron's finances began to unravel as its accounting improprieties came to light. Enron stock plummeted over the next several weeks, and on December 2, 2001, the company declared bankruptcy, rendering its shares worthless. Thousands of Enron employees lost their jobs and a large fraction of their retirement wealth simultaneously.

Christofferson, Susan, Richard Evans and David Musto. "What Do Consumers' Fund Flows Maximize? Evidence from Their Brokers' Incentives" February 2010.

**Abstract:** Regulators have worried since the early days of mutual funds that the advice of mutual-fund brokers is distorted by their incentives. We test for this distortion by relating the incentives arising from brokers' affiliation and compensation to the flows passing through them. We find that flows through unaffiliated brokers bias toward the funds giving them more of the load, and also that these flows realize lower returns. We also find that affiliated brokers bring fund families both the benefits of recapturing outflows and the cost of cannibalizing inflows.

Church, Bryan and Xi Kuang. "Conflicts of Interest, Disclosure and (Costly) Sanctions: Experimental Evidence," *Journal of Legal Studies*, 2009.

Conflicts of interest may compromise individuals' independence in providing advisory services. Full disclosure is a commonly recommended remedy for the adverse effect of conflicts of interest. Yet prior study shows that disclosure may not have the intended effect because it provides individuals with moral license to engage in self-interested behavior, thereby exacerbating biases. We follow up on this research and seek to determine whether other institutional factors may negate the potentially harmful effects of disclosure. We conduct a laboratory experiment, focusing on behavior in an investor/financial adviser dyad, including important representative features in this setting. Our results suggest that disclosure is not necessarily detrimental. We find that investors are better off when conflicts of interest are disclosed and

sanctions are available, even though initiating sanctions is costly to investors. Under such conditions, advisers' bias is dampened markedly.

Cici, Gjergji and Michael Boldin. "The Index Fund Rationality Paradox" *Journal of Banking & Finance*. Jan 2010.

Abstract: Mutual funds that track the S&P 500 are popular because they have significantly lower costs than the average, actively managed equity fund. However, a measurable number of investors select index funds with excessive fees and uncompetitive returns. We call this observation the Index Fund Rationality Paradox because it conflicts with the belief that index fund investors are making a rational, low-cost choice in their 'type of fund' decision. In our analysis of this paradox, we find that both retail and institutional index investors tended to make better choices in recent years, but the cost of poor choices among both groups continues to be significant. In fact, we are able to identify an arguably naive group of retail investors that seem to be unduly influenced by brokers and financial advisors. These investors are largely responsible for the remaining paradox.

Executive Summary: *Ownership of Individual Retirement Accounts (IRAs) and 401(k)-Type Plans*

- *Most recent data—This article uses the most recent SIPP data from the U.S. Census Bureau to examine the prevalence of IRAs and 401(k)-type plans among workers ages 21–64.*
- *Number of 401(k) plans and participants slows, IRA assets grow sharply—The number of 401(k)-type plans and the number of participants in those plans, which had grown sharply through the 1990s, have subsequently grown at a slower pace. Ownership of both 401(k)-type plans and IRAs has risen significantly, as have assets in 401(k)-type plans and IRAs.*
- *IRA growth from rollovers—While IRAs have become the largest single vehicle of retirement assets in the United States, the growth continues to be due to rollovers from other tax-qualified retirement plans, and not from new contributions.*
- *Roth IRAs get most growth, traditional IRAs have most assets—Most new IRA contributions are going to the tax-free-on-withdrawal (nondeductible) Roth IRAs, not traditional (taxable-on-withdrawal) IRAs. But traditional IRAs hold the bulk of IRA assets.*
- *Maximum IRA contribution—In 2005, about 27 percent of IRA owners contributed the maximum amount allowed by law, less than half the rate in 1996, when the contribution limit was half as much as it was in 2005. The data show that contributions to individual account retirement plans are strongly influenced by demographic factors—chiefly income, education, and race.*

Cummins, David and Neil Doherty. "The Economics of Insurance Intermediaries," *The Journal of Risk and Insurance*, Vol. 73, No. 3, 2006

Abstract: This article analyzes the economic functions of independent insurance intermediaries (brokers and independent agents), focusing on the commercial property-casualty insurance market. The article investigates the functions performed by intermediaries, the competitiveness of the market, the compensation arrangements for intermediaries, and the process by which policies are placed with insurers. Insurance intermediaries are essentially market makers who match the insurance needs of policyholders with insurers who have the capability of meeting those needs. Intermediary compensation comprises premium-based commissions, expressed as a percentage of the premium paid, and contingent commissions based on the profitability, persistency, and/or volume of the business placed with the insurer. Empirical evidence is provided that premium-based and contingent commissions are passed on to policyholders in the premium. However, contingent commissions can enhance competitive bidding by aligning the insurer's and the intermediary's interests. This alignment of interests gives insurers more confidence in the selection of risks and thus helps to break the "winner's curse" and encourages insurers to bid more aggressively. Independent intermediaries also help markets operate more efficiently by reducing the information asymmetries between insurers and buyers that can cause adverse selection.

Cupach, William, James M. Carson. "The Influence of Compensation on Product Recommendations Made by Insurance Agents" *Journal of Business Ethics*, Oct. 2002

Abstract: Lawsuits alleging illegal and unethical insurance sales practices have received widespread publicity in recent years. Although many observers have argued that one source of ethical conflicts for insurance agents is the industry's reliance on straight commission compensation, there remains a paucity of empirical data to support the claim. Therefore, whether different forms of compensation influence insurance agent recommendations of products was tested. Survey responses were obtained from 336 insurance agents. Respondents were presented with a composite sketch of a hypothetical client. Following this description, they were asked to identify which 1 of 8 specified life insurance products they would recommend to the client. A between-groups design was employed to manipulate differences in compensation associated with the 8 products. Results indicated that neither amount of coverage nor type of coverage (term life versus cash value) recommended was associated with compensation. However, an unanticipated finding was that amount of coverage recommended was significantly higher when the insured was male than when the insured was female.

Cuthbertson, Keith, Dirk Nitzsche and Niall O'Sullivan. "Mutual Fund Performance" December 2006. Available at <http://ssrn.com/abstract=955807>.

Abstract: We evaluate the academic research on mutual fund performance in the US and UK concentrating particularly on the literature published over the last 20 years where innovation and data advances have been most marked. The evidence suggests that ex-post, there are around 2-5% of top performing UK and US equity mutual funds which genuinely outperform their benchmarks whereas around 20-40% of funds have genuinely poor. Key drivers of relative performance are, load fees, expenses and turnover. There is little evidence of successful market timing. Evidence on picking winners suggests past winner funds persist, particularly when rebalancing is frequent (i.e., less than one year) - but transactions costs and fund fees imply that economic gains to investors from actively switching into winner funds may be marginal. However, recent research using more sophisticated sorting rules (e.g., Bayesian approaches) indicates possible large gains from picking winners, when rebalancing monthly. The evidence also clearly supports the view that past loser funds remain losers. Broadly speaking results for bond mutual funds are similar to those for equity mutual funds but hedge funds show better ex-post and ex-ante risk adjusted performance than do mutual funds. Sensible advice for most investors would be to hold low cost index funds and avoid holding past "active" loser funds. Only very sophisticated investors should pursue an active investment strategy of trying to pick winners - and then with much caution.

Damato, Karen. Take a Load Off: Do-It-Yourself Investors Get More Fund Choices *Wall Street Journal*, Feb. 28, 2010, Available at: <http://www.marketwatch.com/story/take-a-load-off-2010-02-28-193800>

Das, Sanjiv Ranjan. Fee Speech: Signaling, Risk-Sharing, and the Impact of Fee Structures on Investor Welfare" *The Review of Financial Studies*, Winter 2002.

Abstract: The fee structure used to compensate investment advisers is central to the study of fund design, and affects investor welfare in at least three ways: (i) by influencing the portfolio-selection incentives of the adviser, (ii) by affecting risk-sharing between advisers and investor, and (iii) through its use as a signal of quality by superior investment advisers. In this paper, we describe a model in all of these features are present, and use it to compare two popular and contrasting forms of fee contracts, the "fulcrum" and the "incentive" types, from the standpoint of investor welfare. While the former has some undeniably attractive features (that have, in particular, been used by regulators to justify its mandatory use in mutual fund context), we find surprisingly that it is the latter that is often more attractive from the standpoint of investor welfare. Our model is a flexible one; our conclusions are shown to be robust to many extensions of interest. The results are also extended to consider unrestricted fee structures and competitive markets for fund managers.

Dean, Lukas and Michael Finke. "Compensation and Client Wealth Among U.S. Investment Advisors," April, 2011. Available at SSRN: <http://ssrn.com/abstract=1802628>

Abstract: This study uses disclosure data from 7,043 Registered Investment Advisors (RIAs) in the United States to examine differences in client wealth by type of compensation. We find that firms charging commissions and hourly fees have a higher proportion of low net worth clients. Wealthier clients are more likely to be charged performance-based fees and fees based on assets under management. RIA firms that

charge commissions are more likely to provide financial planning services and to have a larger number of employees and lower assets under management. Investment advisors who cater to lower net worth clients are more likely to rely on commission compensation, suggesting that policy restricting compensation may impact the provision of advising services to average investors.

[Del Guercio, Jonathan Reuter, and Paula A. Tkac. "Broker Incentives and Mutual Fund Market Segmentation", \*NBER Working Paper Series\*, No. 16312, August 2010.](#)

Abstract: We study the impact of investor heterogeneity on mutual fund market segmentation. To motivate our empirical analysis, we make two assumptions. First, some investors inherently value broker services. Second, because brokers are only compensated when they sell mutual funds, they have little incentive to recommend funds available at lower cost elsewhere. The need for mutual fund families to internalize broker incentives leads us to predict that the market for mutual funds will be highly segmented, with families targeting either do-it-yourself investors or investors who value broker services, but not both. Using novel distribution channel data, we find strong empirical support for this prediction; only 3.3% of families serve both market segments. We also predict and find strong evidence that mutual funds targeting performance-sensitive, do-it-yourself investors will invest more in portfolio management. Our findings have important implications for the expected relation between mutual fund fees and returns, tests of fund manager ability, and the puzzle of active management. Furthermore, they suggest that changing the way investors compensate brokers will change the nature of competition in the mutual fund industry.

[Dulleck, Uwe, Rudolf Kerschbamer "On Doctors, Mechanics, and Computer Specialists: The Economics of Credence Goods" \*Journal of Economic Literature\*, Volume 44, Number 1, March 2006 , pp. 5-42\(38\)](#)

[Dulleck, Uwe, Rudolf Kerschbamer and Matthias Sutter "The Economics of Credence Goods: An Experiment on the Role of Liability, Verifiability, Reputation, and Competition" \*The American Economic Review\*, Volume 101, Number 2, April 2011 , pp. 526-555\(30\)](#)

[Demski, Joel. "Corporate Conflicts of Interest" \*The Journal of Economic Perspectives\* Spring 2003.](#)

Abstract: This paper surveys conflicts of interest in the corporate governance arena, with emphasis on auditors, boards of directors, analysts and investment bankers, regulators, management, attorneys and investors. Enron provides a host of examples as well. I stress the multifaceted nature of these conflicts, and the fact most research looks at some conflicts, such as auditor independence, absent the larger setting and potential interactions among various players. I further speculate herding behavior is an important explanatory device in understanding periodic failures.

[Dichev, Ilija. "What are Stock Investors' Actual Historic Returns? Evidence from Dollar-Weighted Returns" \*The American Economic Review\*, Vol. 97, No. 1, March 2007.](#)

Abstract: The existing literature typically does not differentiate between security returns and the returns of investors in these securities; usually implicitly, these two concepts are assumed to be the same. However, the returns of stock investors depend not only on the returns of the securities they hold but also on the timing of their capital flows into and out of these securities. This paper suggests a new and more accurate measure of stock investors' historical returns, which involves dollar-weighting of the returns and properly reflects the effect of investors' timing. Theoretically, the essence of dollar-weighted returns is that they value-weight both the cross-section and the time-series of returns. In practical terms, dollar-weighted returns are computed as internal rate of returns (IRRs) from investment projects in which initial market values and contributions from investors (e.g., stock issues) enter with negative signs, and distributions to investors (e.g., dividends, stock repurchases) and final market values enter with positive signs. The empirical results indicate that aggregate dollar-weighted returns are systematically lower than buy-and hold returns. The annual difference is 1.3 percent for the NYSE/AMEX market over 1926-2002, 5.3 percent for Nasdaq over 1973-2002, and averages 1.5 percent for 19 major stock markets around the world over 1973-2004. Thus, this study provides comprehensive evidence that stock investors' actual returns are considerably lower than those from passive holdings and from those documented in the existing literature

on historical stock returns. These results have implications for the debate on the equity premium, for the literature on long-run returns following capital flows, for building successful investment strategies, and others.

Douthit, Jeremy, Kearney, Linwood and Stevens, Douglas E., *Can Cheap Talk Be as Effective at Mitigating Agency Problems as Reputation Building? An Experimental Test in the Presence of a Noisy Performance Measure* (June 21, 2011). Available at SSRN: <http://ssrn.com/abstract=1868986>

Abstract: Given traditional agency theory assumptions and unobservable effort in a single-period setting, the agent is expected to receive low pay from the principal in exchange for low effort. Traditional solutions to this agency problem involve paying the agent a financial incentive tied to some noisy measure of performance, but these incentive solutions are costly and become increasingly costly with increases in the noisiness of the performance measure. In many single-period agency settings in the firm, however, the agent can communicate an intended level of effort to the principal prior to contracting. We document that this pre-contract communication, which is non-enforceable and therefore considered “cheap talk” by traditional economic theory, can be highly effective in mitigating agency problems. In a repeating single-period experimental setting where production is a very noisy indicator of effort, communication of intended effort results in higher pay for the agent, higher effort, and higher profit for the principal than both the control group and a group where the principal and agent interact over multiple periods. Thus, we document a setting where cheap talk can be more effective at mitigating agency problems in the firm than reputation building.

Easterbrook, Frank and Daniel Fischel. “Contract and Fiduciary Duty” *Journal of Law & Economics*, 1993  
For centuries courts have required trustees to serve the interests of beneficiaries loyally-with the same devotion that the trustees dedicate to their own interests. The duty of loyalty, coupled with restitution of any gain the trustee obtains by favoring his own interest, defines a special relation.

Economist, “Money for Old Hope” *The Economist* February 28, 2008.

In this article, the authors cite a Boston Consulting group survey of fund managers finding that profit margins are 42 percent in the industry.

Ernst & Young. “RaDaR: Life and Pensions Outlook for 2011”, January 2011.

Available at: [http://www.ey.com/Publication/vwLUAssets/RaDaR\\_life\\_and\\_pensions\\_outlook\\_-\\_2011/\\$FILE/EY\\_RaDaR\\_Life\\_and\\_Pensions\\_Outlook\\_2011.pdf](http://www.ey.com/Publication/vwLUAssets/RaDaR_life_and_pensions_outlook_-_2011/$FILE/EY_RaDaR_Life_and_Pensions_Outlook_2011.pdf)

Conclusion: Despite Treasury Select Committee meetings and high profile challenges from segments of the IFA market, we believe the RDR will be implemented by the FSA as currently drafted. Higher qualifications will have to be achieved and indemnity commission on investment products will be eradicated. Platform regulations, as published in the Consultative Paper in June, will fundamentally remain as they stand, but a great deal of uncertainty will remain as to how much consumers will be willing to pay for advice by the end of 2012. Available at:

Evans, Allison L., *Portfolio Manager Ownership and Mutual Fund Performance* (January 15, 2006). Available at SSRN: <http://ssrn.com/abstract=893802>

This paper examines the association between a mutual fund manager's personal fund investment and mutual fund performance. My database of newly-released managerial ownership disclosures reveals that fund ownership levels vary across mutual fund managers and, in many instances, are quite large. I find that mutual fund returns are increasing in the level of managerial fund investment, consistent with personal ownership realigning decision-maker and shareholder interests. Also consistent with the reduction of agency costs of the type set forth in Dow and Gorton (1997), I find that managerial ownership is inversely related to fund turnover.

Fecht, Falko, Hackethal, Andreas and Karabulut, Yigitcan, *Is Proprietary Trading Detrimental to Retail Investors?* (November 12, 2010). Available at SSRN: <http://ssrn.com/abstract=1783679>

We study the conflict of interests that might arise at universal banks between their proprietary trading and their retail banking. Using a unique data set that covers the stock investments of each German bank and of its respective retail customers on a security-by-security basis we study the return characteristics of those stocks that flow from a bank's proprietary portfolio into its

respective customers' portfolio. Our results show that those stocks that are removed from banks' proprietary portfolio into the portfolio of their respective customers are lower performing than the average stock held in both banks and customers portfolios. This suggests that banks abuse their role in advising retail investors in order to dump low performing stocks.

Ferrell, Allen. "The Law and Finance of Broker-Dealer Mark-Ups" *The Harvard John M. Olin Discussion Paper Series*, April 2011. Available at: [http://www.law.harvard.edu/programs/olin\\_center](http://www.law.harvard.edu/programs/olin_center)

Abstract: The prices charged retail customers by broker-dealers for less-liquid, lower-priced securities have been of long-standing regulatory concern. In particular, the National Association of Securities Dealers (succeeded now by the Financial Industry Regulatory Authority) has long had regulations prohibiting broker-dealers from charging excessive "mark-ups" and "mark-downs." This paper, using a unique dataset generously provided by the National Association of Securities Dealers tracking some 161,635 equity transactions involving fourteen broker-dealers and retail customers in largely less liquid, lower-priced securities over the course of the 2003-2005 period, provides the first comprehensive analysis of the determinants of the mark-ups and mark-downs charged by broker-dealers. In particular, the effect of broker-dealer solicitation, broker-dealer participation in the trade as a principal, stock price volatility, stock price level, trade volume and the bid-ask spread are examined on the size of mark-ups and mark-downs charged. This analysis is placed in the context of the law on mark-ups and mark-downs.

Ferri, Fabrizio and Tatiana Sandino. "The Impact of Shareholder Activism on Financial Reporting Compensation: The Case of Employee Stock Options Expensing" *The Accounting Review*, March 2009.

We examine the economic consequences of more than 150 shareholder proposals to expense employee stock options (ESO) submitted during the proxy seasons of 2003 and 2004, the first case in which the SEC allowed a shareholder vote on an accounting matter. Our results indicate that these proposals affected accounting and compensation choices. Specifically, (i) targeted firms were more likely to adopt ESO expensing relative to a control sample of S&P 500 firms, (ii) among targeted firms, the likelihood of adoption increased in the degree of voting support for the proposal, and (iii) non-targeted firms were more likely to adopt ESO expensing when a peer firm was targeted. Additionally, (i) CEO pay decreased in firms in which the proposal was approved relative to a control sample of S&P 500 firms, and (ii) among targeted firms, approval of the proposal was associated with decreases in CEO compensation and the use of ESO in CEO pay. Our findings reveal an increasing influence of shareholder proposals on governance practices.

Financial Engines and Hewitt. "Help in Defined Contribution Plans: Is It Working and for Whom?" January, 2010. Available at Financial Engines: <http://corp.financialengines.com/mwg-internal/de5fs23hu73ds/progress?id=6vG2NS09VQ>

Executive Summary: Professional help provided to participants in employer-sponsored 401(k) plans has been growing steadily for the last decade. In the landmark report "Help in Defined Contribution Plans: Is It Working and for Whom?," Hewitt Associates and Financial Engines examine the topic of employer-sponsored professional help in 401(k) plans and answer the questions: Are participants using professional 401(k) help better off? Which participants use professional help, and what kind of help do they use?

Finkelstein, Amy. "E-Z Tax: Tax Salience and Tax Rates" National Bureau of Economic Research, Working Paper No. 12924, January 2007.

This paper tests the hypothesis that the salience of a tax system affects equilibrium tax rates. To do this, I analyze how toll rates change after toll facilities adopt electronic toll collection. Unlike manual toll collection, in which the driver must hand over cash at the toll collection plaza, electronic toll collection automatically debits the toll amount as the car drives through the toll plaza, thereby plausibly decreasing the salience of the toll. I find robust evidence that toll rates increase following the adoption of electronic toll collection. My estimates suggest that, in steady state, toll rates are 20 to 40 percent higher than they would have been without electronic toll collection. Consistent with the hypothesis that decreased tax salience is responsible for the increase in toll rates, I also find evidence that the short run elasticity of driving with respect to the actual toll declines (in absolute value) following the adoption of electronic toll collection. I consider a variety of alternative explanations for these results and conclude that these are unlikely to be able to explain the findings.

[FINRA](http://www.finra.org/Investors/protectyourself/InvestorAlerts/MutualFunds/p006022). <http://www.finra.org/Investors/protectyourself/InvestorAlerts/MutualFunds/p006022>

First Research “Industry Profile: Financial Planners and Investment Advisors”, Oct. 26, 2009.

Fischel, Daniel and Todd Kendall. “Comment to the Department of Labor on a Proposed Rule Regarding Fiduciary Status Under ERISA”, April 12, 2011. Available at: <http://www.dol.gov/ebsa/pdf/1210-AB32-PH056.pdf>

Conclusion: In summary, economic theory and available evidence indicate that factors in the current market environment likely serve to substantially constrain the ability of IRA investment brokers to act on potential conflicts of interest. Therefore, we see no basis to conclude that the Proposed Rule would generate benefits large enough to outweigh the costs.

Fischel, Daniel and John Langbein. “ERISA’s Fundamental Contradiction: The Exclusive Benefit Rule”, *UChi. L. Rev.* 55: 1105-60.

The comprehensive federal scheme for regulating pension and other employee benefit plans, ERISA, is approaching its fifteenth anniversary. ERISA has attracted a large administrative gloss and a burgeoning case law. Experience has begun to show the effects of the statute.

Fischer, Rene and Ralf Gerhardt. “Investment Mistakes of Individual Investors and the Impact of Financial Advice,” SSRN Working Papers, August 2007. Available at SSRN:

[http://papers.ssrn.com/sol3/papers.cfm?abstract\\_id=1009196](http://papers.ssrn.com/sol3/papers.cfm?abstract_id=1009196)

Abstract: Extensive research has demonstrated and analyzed deviations in individual investors' investment decisions from recommendations of financial theory. As there is still no structured framework for evaluating investment mistakes, we introduce a generic investment process for individual investors as guiding structure. Going along this investment process we compare findings from existing research, contrasting normative recommendations with empirical evidence about actual behavior of individual investors. We show that these deviations lead to considerable welfare losses. Therefore we present financial advice as (potentially) correcting factor in this process and construct a simple model to capture its very impact on individual investors' investment success, measured in risk-adjusted return and wealth.

Foster, Patricia. “Mutual Fund Multi-Class Offerings: Addressing Conflicts of Interest Through Meaningful Disclosure and Robust Sales Practice Protocols” *The Investment Lawyer*, Vol. 16, No. 6. June 2009.

Abstract: The conflicts of interest attendant to mutual fund multi-class offerings have been the subject of considerable regulatory interest since the multi-class structure made its debut in 1988. Recent amendments to Form N-1A, the registration form used by mutual funds, are intended to enhance disclosures provided to mutual fund investors. 1 The enhanced disclosure will assist investors in comparing the dazzling array of mutual fund choices and alert investors to the potential conflicts of interest that result from payments made by a fund and/or its affiliates to financial intermediaries.

Freeman, John P. and Brown, Stewart L., *Mutual Fund Advisory Fees: New Evidence and a Fair Fiduciary Duty Test* (August 20, 2008). *Oklahoma Law Review*, Vol. 61, p. 83, 2008. Available at SSRN:

<http://ssrn.com/abstract=1242642>

A recent article in the *Economist* called attention to the mutual fund industry's flagrantly noncompetitive fee structure, noting that fund managers earn a "staggering" profit margin of 42% on average, largely because "most fund managers do not compete on price." Despite this reality, in a recent law review article based on research financed in part by the Investment Company Institute (a lobbying organization for fund sponsors), Professors John Coates and Glenn Hubbard purport to show that mutual fund managers compete vigorously on price and that fund shareholders are not suffering from price gouging over fund fees. The authors of the present article, "Mutual Fund Advisory Fees: New Evidence and a Fair Fiduciary Duty Test," beg to differ. Fund portfolio managers tend to charge their own shareholders double what they charge for essentially identical advisory services rendered to institutional investors in the free market. This reality raises severe fiduciary duty problems that the courts and the Securities Exchange Commission have so far proven unable or unwilling to solve. This new article proposes a better way of analyzing fund managers' fee contracts, relying on free market prices as a test for fairness, rather than comparisons based on conflicted,

inflated fund market pricing. A Forbes writer noted some time ago that fund managers' "worst nightmare" would result if they were required to charge their funds' shareholders (to whom fiduciary duties are indisputably owed) prices based on the much lower portfolio management fees the fund managers charge when selling basically the same portfolio advisory services to third-party institutional clients in arm's-length transactions. The authors contend that a nightmarish outcome is exactly what price-gouging fund managers deserve.

Friesen, Geoffrey C. and Sapp, Travis. "Mutual Fund Flows and Investor Returns: An Empirical Examination of Fund Investor Timing Ability", 2007. Available at: [http://www.tfscapital.com/research/files/mf\\_flows\\_and\\_rets.pdf](http://www.tfscapital.com/research/files/mf_flows_and_rets.pdf)

Abstract: We examine the timing ability of mutual fund investors using cash flow data at the individual fund level. Over 1991-2004 equity fund investor timing decisions reduce fund investor average returns by 1.56% annually. Underperformance due to poor timing is greater in load funds and funds with relatively large risk-adjusted returns. In particular, the magnitude of investor underperformance due to poor timing largely offsets the risk-adjusted alpha gains offered by good-performing funds. Investors in equity index funds also exhibit poor investment timing. We demonstrate that our empirical results are consistent with investor return-chasing behavior. Investor underperformance due to timing is economically small among bond funds and non-existent among money market funds.

Fung, Archon, Graham, Mary, Weil, David and Fagotto, Elena, *The Political Economy of Transparency: What Makes Disclosure Policies Sustainable?* (December 2004). KSG Working Paper No. RWP03-039; Institute for Government Innovation, John F. Kennedy School of Government, Harvard University OPS-02-03. Available at SSRN: <http://ssrn.com/abstract=384922> or doi:10.2139/ssrn.384922

Abstract: This paper explores the dynamics of transparency. It asks why some government-created systems of disclosure improve over time while others stagnate or degenerate into costly paperwork exercises. Transparency policies inevitably begin as unlikely compromises. Though transparency is universally admired in principle, its particular applications frequently conflict with other societal values or powerful political interests. Disclosing information can clash with efforts to protect proprietary information, guard personal privacy, or limit regulatory burdens. It can also clash with central economic and political objectives of target organizations that may view it as a threat to reputation, markets or political influence. At the same time, the benefits of disclosure are often diffuse. Beneficiaries may be consumers, investors, employees, and community residents. Such users are rarely organized to sustain support and oversight of transparency systems.

Gabaix, Xavier and David Laibson. "Shrouded Attributes, Consumer Myopia, and Information Suppression in Competitive Markets," *The Quarterly Journal of Economics*, May 2006.

Abstract: Following Becker (1957) we ask whether competition eliminates the effects of behavioral biases. We study products with add-ons. In competitive markets with costless communication, Bayesian consumers infer that hidden prices are likely to be high prices. Hence, firms choose not to shroud information. However, information shrouding may occur in an economy with some myopic consumers. Such shrouding creates an inefficiency. Sometimes firms have an incentive to eliminate this inefficiency by educating their competitors' myopic consumers. However, if add-ons have close substitutes, a "curse of debiasing" arises, and firms will not be able to profitably debias consumers by unshrouding add-ons. In equilibrium, two kinds of exploitation coexist. Optimizing firms exploit myopic consumers through marketing schemes that shroud high-priced add-ons. In turn, sophisticated consumers exploit these marketing schemes. It is not profitable to lure either myopes or sophisticates to non-exploitative firms. We show that informational shrouding flourishes even in highly competitive markets, even in markets with costless advertising, and even when the shrouding generates allocational inefficiencies.

Gallaher, Steven, Kaniel, Ron and Starks, Laura T., *Madison Avenue Meets Wall Street: Mutual Fund Families, Competition and Advertising* (January 2006). Available at SSRN: <http://ssrn.com/abstract=879775>

Abstract: We examine the effects of mutual fund families' strategic decisions, particularly the advertising decision, on investor flows into the families. We find evidence that beyond performance a family's strategic decisions such as advertising, distribution channels, fund offerings and expense ratios, have significant effects on investor flows. Consistent with evidence at the individual fund level, investor flows have an increasing and convex relation to a family's past performance for high performing families. We also find a similar association between a family's flows and its relative levels of advertising expenditures with a significant positive effect for high relative advertisers only.

Gerken, William and Stephen Dimmock. Predicting Fraud by Investment Managers. May 2011. Available at SSRN: <http://ssrn.com/abstract=1832770>.

Abstract: We test the predictability of investment fraud using a panel of mandatory disclosures filed with the U.S. Securities and Exchange Commission (SEC). We show that past regulatory and legal violations, conflicts of interest, and monitoring have significant power to predict fraud. Avoiding the 5% of firms with the highest ex ante predicted fraud risk would allow an investor to avoid 29% of fraud cases and over 40% of the total dollar losses from fraud. We examine the ability of investors to implement fraud prediction models based on the disclosure filings, and suggest changes in SEC data access policies that could benefit investors.

Gil-Bazo and Pablo Ruiz-Verdu. "The Relation between Price and Performance in the Mutual Fund Industry". 2009 Available at: <http://earchivo.uc3m.es:8080/bitstream/10016/7474/1/The%20relation%20between%20price%20and%20performance%20in%20the%20mutual%20fund%20industry.pdf>

Abstract: Gruber (1996) drew attention to the puzzle that investors buy actively managed equity mutual funds, even though on average such funds underperform index funds. We uncover another puzzling fact about the market for equity mutual funds: Funds with worse before-fee performance charge higher fees. This negative relation between fees and performance is robust and can be explained as the outcome of strategic fee-setting by mutual funds in the presence of investors with different degrees of sensitivity to performance. We also find some evidence that better fund governance may bring fees more in line with performance.

Gil-Bazo, Javier and Ruiz-Verdú, Pablo. When Cheaper is Better: Fee Determination in the Market for Equity Mutual Funds (May 17, 2005). Available at SSRN: <http://ssrn.com/abstract=724862> or doi:10.2139/ssrn.724862

In this paper, we develop a model of the market for equity mutual funds that captures three key characteristics of this market. First, there is competition among funds. Second, fund managers' ability is not observed by investors before making their investment decisions. And third, some investors do not make optimal use of all available information. The main results of the paper are that 1) price competition is compatible with positive mark-ups in equilibrium; and 2) worse-performing funds set fees that are greater or equal than those set by better-performing funds. These predictions are supported by available empirical evidence.

Guiso, Luigi, Paola Sapienza and Luigi Zingales. "Trusting the Stock Market" *The Journal of Finance*. December 2008.

We study the effect that a general lack of trust can have on stock market participation. In deciding whether to buy stocks, investors factor in the risk of being cheated. The perception of this risk is a function not only of the objective characteristics of the stocks, but also of the subjective characteristics of the investor. Less trusting individuals are less likely to buy stock and, conditional on buying stock, they will buy less. We find evidence consistent with these propositions in Dutch and Italian micro data, as well as in cross country data. All the evidence suggests that lack of trust could be an important factor in explaining the limited participation puzzle, especially among more wealthy investors.

Hall, John. "Are Brokers' Buy, Hold and Sell Recommendations of Value to Individual Investors," Available at SSRN: <http://ssrn.com/abstract=304201> or doi:10.2139/ssrn.304201

Abstract: Investors who invest on the Johannesburg Securities Exchange (JSE) base their investment decisions on information obtained from the financial press, radio and television or from a broker or investment consultant. The purpose of the study is to test the hypothesis that an individual using information obtained from sharebroking companies can earn a return in excess of the market return on the JSE. To test this hypothesis, a buy, a hold and a sell portfolio were created using the average recommendations received from the brokers. The results of this study indicate that investors can earn a return greater than that of the market return based on brokers' recommendations to buy and to hold, if no risk-adjustments are made to the returns. If the returns are adjusted for risk, the brokers' recommendations were able to render a return superior or equal to the market and they are able to limit investors' losses in relation to the movement in the market.

Haslem, John. "Why Do Mutual Fund Investors Employ Financial Advisors," Available at SSRN: <http://ssrn.com/abstract=1115886>

Abstract: The actual returns on mutual funds earned by investors are much lower than the rational behavior paradigm of financial economics would suggest. Certainly this is evidenced in the performance of funds distributed through the advisor channel. From the evidence here and elsewhere, much (if not most) of how and where investors go about investing in funds has behavioral biases as well as other behavioral and knowledge overtones. It is difficult to clearly differentiate these biases from the other behavioral and knowledge influences.

Haslem, John A., Assessing Mutual Fund Expenses and Transaction Costs. *Journal of Investing*, Vol. 15, No. 3, pp. 52-56, Fall 2006. Available at SSRN: <http://ssrn.com/abstract=1144168>

This is a first-step mutual funds study that provides analysis and disclosure of the elements of a newly defined total expense ratio, which includes the regulatory expense ratio, brokerage commissions, and implicit trading costs. Three structures are provided that identify whether a particular fund's total expense ratio is relatively reasonable or excessive relative to each of two benchmark funds. The concepts of expense effectiveness and breakeven rate of return are employed in this process. Mutual fund brokerage commissions and implicit trading costs vary significantly among various types and styles of domestic equity funds, and when summed they are not infrequently larger than a fund's regulatory expense ratio.

This is true in the current study for Vanguard 500 Index Fund. The continuing bad news is that disclosure of brokerage commissions and implicit trading costs remains effectively hidden and completely hidden, respectively, from fund shareholders. This must change and this study provides an approach for doing so.

Hackethal, Andreas, Haliassos, Michael and Jappelli, Tullio, *Financial Advisors: A Case of Babysitters?* (June 8, 2011). Available at SSRN: <http://ssrn.com/abstract=1360440>.

Abstract: We use two data sets, one from a large brokerage and another from a major bank, to ask: (i) whether financial advisors are more likely to be matched with poorer, uninformed investors or with richer and experienced investors; (ii) how advised accounts actually perform relative to self-managed accounts; (iii) whether the contribution of independent and bank advisors is similar. We find that advised accounts offer on average lower net returns and inferior risk-return tradeoffs (Sharpe ratios). Trading costs contribute to outcomes, as advised accounts feature higher turnover, consistent with commissions being the main source of advisor income. Results are robust to controlling for investor and local area characteristics. The results apply with stronger force to bank advisors than to independent financial advisors, consistent with greater limitations on bank advisory services.

Heugens, Pursi, Niki A. den Nieuwenboer, Muel Kaptein. "White Collars, Dirty Hands: A Grounded Neo-Institutional Theory of Misconduct in Professional Service Firms", Sept. 2007. Available at <http://ssrn.com/abstract=1031066>.

Abstract: We develop a grounded neo-institutional theory explaining the occurrence of misconduct in professional service firms. The theory harbors two novel insights. First, parallel governance structures, which are presently the norm in many professional fields, aggravate rather than dampen misconduct. Second, decoupling and institutional disruption are both necessary and jointly sufficient conditions for the emergence of misconduct. The empirical evidence supporting our theory derives from in-depth interviews with 65 professionals working for Dutch auditing, law, and consultancy firms and corroboratory data sources.

Holden, Sarah and Jack VanDerhei. 2004. "401(k) Plan Asset Allocation, Account Balances, and Loan Activity in 2003" *EBRI Issue Brief* No. 272 (see this and other EBRI yearly reports for asset allocation statistics)

Holden, Sarah, John Sabelhaus and Steven Bass. "The IRA Investor Profile" Investment Company Institute. 2010. Available at: [http://www.ici.org/pdf/rpt\\_10\\_ira\\_rollovers.pdf](http://www.ici.org/pdf/rpt_10_ira_rollovers.pdf)

Holden, Sarah. "ICI Testimony for ERISA Advisory Council Working Group on Approaches for Retirement Security in the United States," September 17, 2009.

Section I of this testimony describes the role of IRAs in U.S. households' retirement savings and summarizes research on the distribution decisions retirement plan participants make when leaving an employer or retiring. Research finds that older participants with larger account balances are more likely to preserve assets at job change or retirement (either by leaving them in the plan or rolling into IRAs or another employer's plan). Many retiring defined contribution (DC) plan participants seek advice with these decisions. In addition, in any given year, few households that own traditional IRAs take distributions and the majority of those taking distributions indicate they are retired. Section II explores the asset composition of IRAs and the mutual fund expenses for IRA investors' mutual fund holdings. Forty-five percent of IRA assets were invested in mutual funds at year-end 2008, and IRA mutual fund assets were concentrated in lower-cost funds. Section III highlights the services shareholders receive when they seek financial advice.

Section IV of this testimony reviews the requirements imposed on plans to provide information to participants to assist them in making distribution decisions and the applicable law and rules governing IRA providers, including the disclosures they are required to make to IRA investors. It also describes certain obligations under the federal securities laws and ERISA on financial planners, advisers, and brokers in advising individuals about IRAs. Our analysis finds that plan participants receive information explaining the consequences of taking a distribution from a plan and rolling it into an IRA and that all IRA investors receive information on fees and other features associated with their IRA and periodic reports on the status of their accounts. While plan participants are well-served by these disclosures, Section V suggests that the

Department could consider certain steps to encourage employers to provide education and information to participants making distribution decisions.

Hortaçsu, Ali and Chad Syverson; "Product Differentiation, Search Costs, and Competition in the Mutual Fund Industry: A Case Study of S&P 500 Index Funds." *Quarterly Journal of Economics*, 2004, 119(2), pp. 403.

Abstract: We investigate the role that nonportfolio fund differentiation and information/search frictions play in creating two salient features of the mutual fund industry: the large number of funds and the sizable dispersion in fund fees. In a case study, we find that despite the financial homogeneity of S&P 500 index funds, this sector exhibits the fund proliferation and fee dispersion observed in the broader industry. We show how extra-portfolio mechanisms explain these features. These mechanisms also suggest an explanation for the puzzling late-1990s shift in sector assets to more expensive (and often newly entered) funds: an influx of high-information-cost novice investors.

Houge, Todd and Jay Wellman. *Journal of Business Ethics*, "The Use and Abuse of Mutual Funds", Vol. 70 No. 1, January 2007

Prior research shows that mutual fund investors are often aware of up-front charges like sales loads, but they are less mindful of annual operating expenses, even though both types of fees lower overall performance. This study documents the historical trend and recent abuse of annual mutual fund expenses. As the industry becomes more adept at segmenting customers by level of investment sophistication, we claim that load mutual fund companies take advantage of this ability and charge higher expenses to their target customer: the less-knowledgeable investor. No-load fund companies, who tend to attract the more sophisticated investor, offer lower expenses. For example, over 2000-2004 the average annual expense ratio of load equity funds was 50 basis points higher than no-load equity funds. We show evidence of this widening cost disparity since the early 1990s among new and existing equity, bond, and index funds. We also document a growing abuse of sales distribution or 12b-1 fees among funds that are closed to new investors, almost all of which are load funds. Thus, load fund investors are more susceptible to paying higher expenses and receiving lower returns over time.

Huang, Jennifer, Clemens Sialm and Hanjian Zhang. "Risk Shifting and Mutual Fund Performance" *The Review of Financial Studies* forthcoming 2011.

Abstract: Mutual funds change their risk levels significantly over time. This paper investigates the performance consequences of risk shifting, as well as the economic motivations and the mechanisms of risk shifting. Using a holdings-based measure of risk shifting, we find that funds that increase risk perform worse than funds that keep stable risk levels over time. In addition, funds that expect higher benefits from risk shifting are more likely to increase risk and perform particularly poorly after increasing risk. Our results are consistent with the notion that agency problems, rather than the ability to take advantage of changing investment opportunities, are the likely motivation behind risk shifting behavior.

Hung, Angela, Noreen Clancy, Jeff Dominitz, Eric Talley, Claude Berrebi, Farruk Suvankulov. "Investor and Industry Perspectives on Investment Advisers and Broker Dealers" RAND Corporation Technical Report prepared for the SEC, 2008.

Conclusion: Overall, we found that the industry is very heterogeneous, with the thousands of firms taking many different forms and offering many different combinations of services and products. Partly because of this diversity of business models and services, investors typically fail to distinguish broker-dealers and investment advisers along the lines defined by federal regulations. Despite their apparent confusion about titles, duties, and fees, investors expressed high levels of satisfaction with the services they receive from their own financial service providers. Today's investment adviser and broker-dealer industries are complex, heterogeneous industries. Regulating these industries presents many challenges. We hope that the information provided in this report will contribute to this important effort.

Inderst, Roman and Marco Ottaviani. "Misselling through Agents" *American Economic Review*, Vol 99, no. 3, 2009.

Abstract: This paper analyzes the implications of the inherent conflict between two tasks performed by direct marketing agents: prospecting for customers and advising on the product's "suitability" for the

specific needs of customers. When structuring salesforce compensation, firms trade off the expected losses from "misselling" unsuitable products with the agency costs of providing marketing incentives. We characterize how the equilibrium amount of misselling (and thus the scope of policy intervention) depends on features of the agency problem including: the internal organization of a firm's sales process, the transparency of its commission structure, and the steepness of its agents' sales incentives.

IRAs Play an Increasingly Important Role in Saving for Retirement.

Jennings, Marianne M., *Ethics and Investment Management: True Reform*. *Financial Analysts Journal*, Vol. 61, No. 3, pp. 45-58, May/June 2005. Available at SSRN: <http://ssrn.com/abstract=746564>

What happened to ethical behavior in the era of the dot-com, the bubble, Enron, and WorldCom? We were not involved in close ethical calls in these cases. The lapses were great, the conflicts many, and the cost, in terms of investor trust, nearly unspeakable. Each time scandals occur, market reforms result, but the pattern is that, despite their extensive nature, the reforms do not bring us an insurance policy against misconduct. True reform lies not in statutory or codified detail. Rather, true reform comes from a strong moral compass that is applied by leaders who demonstrate ethical courage. True reform requires a focus on doing more than the law requires and less than the law allows.
